The dried egg products were produced between Feb. 28, 2013, and Feb. 8, 2014, and bear the establishment number “INSPECTED EGG PRODUCTS PLANT 21493G” inside the USDA Mark of Inspection. These products were shipped nationwide and to U.S. military installations in the United States and abroad, as well as to Canada.

The problem was discovered by Washington State Laboratories in response to a billing inquiry by Nutriom LLC. The laboratory then notified FSIS personnel of the discrepancies in laboratory results. FSIS and the company have received no reports of illnesses due to consumption of these products.

Consumption of food contaminated with *Salmonella* can cause salmonellosis, one of the most common bacterial foodborne illnesses. The most common symptoms of salmonellosis are diarrhea, abdominal cramps, and fever within 12 to 72 hours after eating the contaminated product. The illness usually lasts 4 to 7 days. Most people recover without treatment. In some persons, however, the diarrhea may be so severe that the patient needs to be hospitalized. Older adults, infants, and persons with weakened immune systems are more likely to develop a severe illness. Individuals concerned about an illness should contact their health care provider.

FSIS inspects egg products under the Egg Products Inspection Act. FDA typically takes jurisdiction of egg products after they leave the egg facility if they are incorporated into FDA-regulated products. In this case, USDA is leading the recall rather than FDA because the products are in consumer packages with an identifiable USDA Mark of Inspection, and FSIS had jurisdiction over the product when the contamination occurred. FSIS and FDA are continuing to work together to ensure food safety, and the management of this recall is such an example.

FSIS routinely conducts recall effectiveness checks to verify recalling firms notify their customers of the recall and that steps are taken to make certain that the product is no longer available to consumers. When available, the retail distribution list(s) will be posted on the FSIS website at www.fsis.usda.gov/recalls.

FSIS advises all consumers to safely prepare and consume egg products that have been cooked to a temperature of 160° F. The only way to confirm that egg products are cooked to a temperature high enough to kill harmful bacteria is to use a food thermometer that measures internal temperature, <http://1.usa.gov/1cDxcDQ>.

Media with questions regarding the recall can contact Leonardo Etcheto, Chief Operating Officer, at (360) 413-7269, ext. 106. Consumers with questions regarding the recall can contact Julie Cuffee, Customer Service Representative, at (360) 413-7269, ext. 101.

Consumers with food safety questions can “Ask Karen,” the FSIS virtual representative available 24 hours a day at AskKaren.gov or via smartphone at m.askkaren.gov. The toll-free USDA Meat and Poultry Hotline 1-888-MPHotline (1-888-674-6854) is available in English and

Spanish and can be reached from 10 a.m. to 4 p.m. (Eastern Time) Monday through Friday. Recorded food safety messages are available 24 hours a day. The online Electronic Consumer Complaint Monitoring System can be accessed 24 hours a day at <http://www.fsis.usda.gov/reportproblem>.

USDA Recall Classifications	
Class I	This is a health hazard situation where there is a reasonable probability that the use of the product will cause serious, adverse health consequences or death.
Class II	This is a health hazard situation where there is a remote probability of adverse health consequences from the use of the product.
Class III	This is a situation where the use of the product will not cause adverse health consequences.
