Punctured vials may be stored for 6 hours.

Regardless of storage, discard punctured vials after 6 hours.

* each 0.5 ml dose contains 5 mcg SARS-CoV-2rS and 50 mcg Matrix-M™ adjuvant

Administration and Storage of Novavax

Special Considerations

Mixed Dosing of Primary Series

If a product other than Novavax is administered as dose 2 in primary series, it is considered an error and must be reported to VAERS.

If a product other than Novavax is administered as dose 2 in primary series **due to a contraindication**, it is not considered an error. The second dose would be given at least 4 weeks from the first dose of Novavax.

Coadministration With Other Vaccines

Novavax may be given along with other vaccines if determined appropriate by the provider.

Consider waiting 4 weeks before receiving a Covid-19 vaccination if an orthopoxvirus vaccination has been given. If a Covid-19 vaccination has been given already, there is no need to wait before receiving an orthopoxvirus vaccination.
