OMB NO. 0938-0391

(1) At the time of employment, or within one (1) month prior to employment, and at least annually thereafter, employees and nonpaid personnel of facilities shall be screened for tuberculosis. The first tuberculin skin test must be read prior to the employee starting work. For health care workers who have not had a documented negative tuberculin skin test result during the preceding twelve (12) months, the baseline tuberculin skin testing should employ the two-step method. If the first step is negative, a second test should be performed one (1) to three (3) weeks after the first step. The frequency of repeat testing will depend on the risk of infection with tuberculosis.

(2) All employees who have a positive reaction to the skin test shall be required to have a chest x-ray and other physical and laboratory examinations in order to complete a diagnosis.

(3) The facility shall maintain a health record of each employee that includes reports of all employment-related health screenings.

(4) An employee with symptoms or signs of active disease, (symptoms suggestive of active tuberculosis, including, but not limited to, cough, fever, night sweats, and weight loss) shall not be permitted to work until tuberculosis is ruled out.

Any deficiency statement ending with an asterisk (*) denotes a deficiency which the institution may be excused from correcting provided it is determined that other safeguards provide sufficient protection to the patients. (See instructions.)
