	The care plan, dated 7/9/24 and revised 2/25/25, indicated the resident was at risk for falling related to altered balance and mobility. The resident needed assistance of one staff member for transfers and ambulation attempts. The interventions, dated 2/26/25, included, but were not limited to, the resident was to utilize the wheelchair for mobility. On 2/17/25 the resident was to utilize a gait belt with staff while ambulating. On 2/3/25 educate the family on the importance of safe wheelchair mobility. On 7/9/24 encourage the resident to assume standing position slowly, ensure the floor was free of liquids and foreign objects, keep the call light within reach, keep personal items and frequently used items within reach, provide non-skid footwear, staff were to assist the resident with transfers as needed, and therapy was to evaluate and treat the resident as needed.  The nurse's note, dated 2/13/25 at 9:13 p.m., indicated Resident 57 was in their room ambulating with a walker, going from the bathroom to the bed with CNA assistance. The CNA stepped away to straighten linens on the resident's bed and the resident became weak and fell backwards. The fall was witnessed by the CNA and the resident did not hit their head upon the fall. The hospice company and the physician were notified. The resident complained of pain to the mid back. Urgent x-rays were ordered. The nurse was notified by the x-ray company, which indicated they would not be able to do x-rays until the following day.  The IDT note, dated 2/17/25 at 7:22 a.m., indicated the fall on 2/15/25 was reviewed. The new measures taken to prevent the recurrence of the fall were for the resident to be taken to the bed. The root cause was bilateral lower extremity (BLE)
