

Setup for Cisco AnyConnect Secure Mobility Client

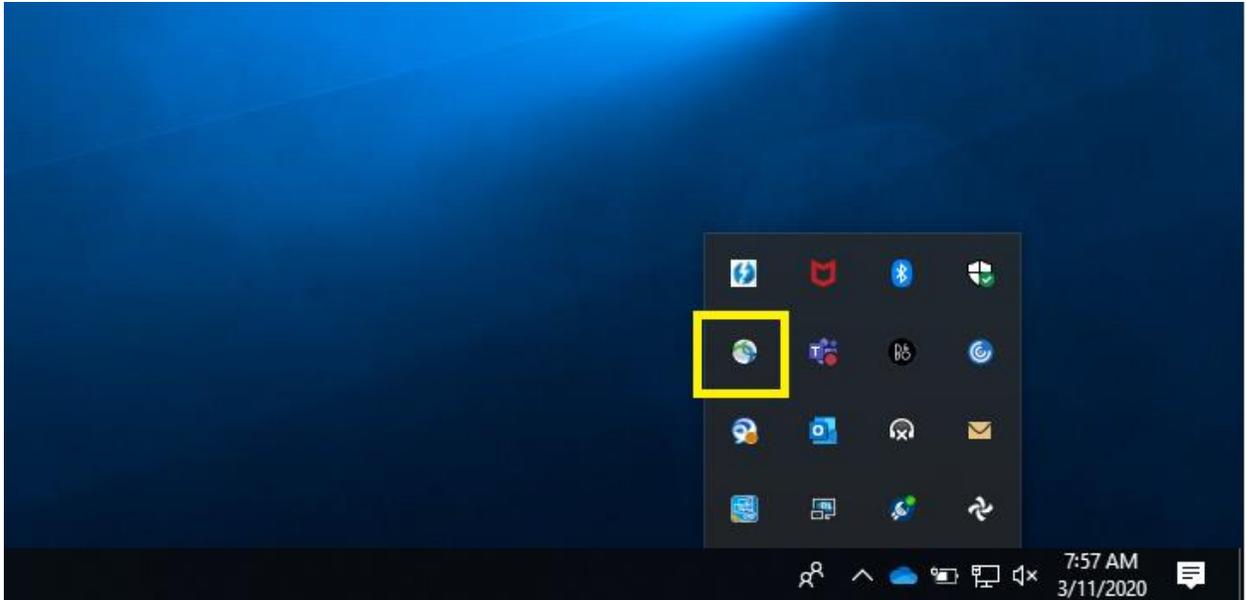

1. Locate and launch the 'Cisco AnyConnect Secure Mobility Client' software.
 - a. This is accessible in 3 different locations from any state-issued laptop:
 - i. A shortcut on your desktop

- ii. From inside the 'Cisco' folder in the Programs list of your Start Menu.
 1. *Start Menu*
 2. *Cisco folder (left-hand column)*
 3. *Cisco AnyConnect Secure Mobility Client*

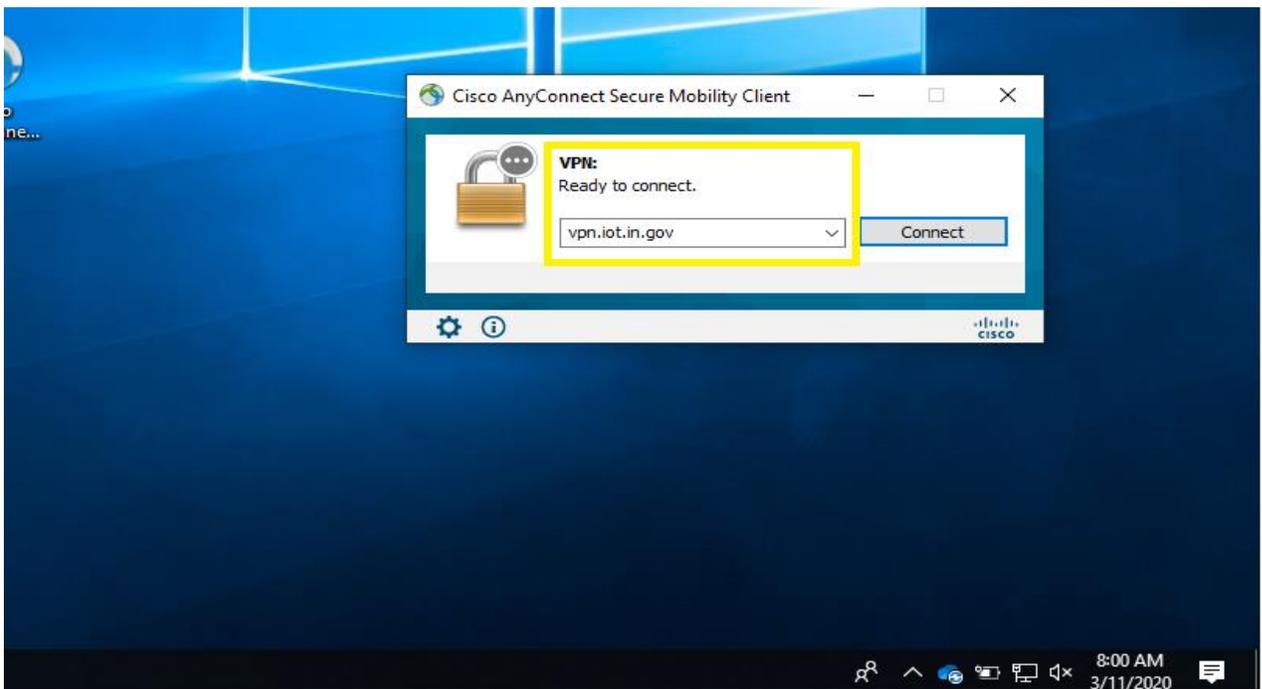

- iii. In the Hidden Icons block of your System Tray.
 1. Look in the lower-right corner of the screen
 2. Locate & click on the '^' icon
 3. Single-click on the same icon as noted above
 - a. **PLEASE NOTE:** You will only see the 'picture' of the icon and no text

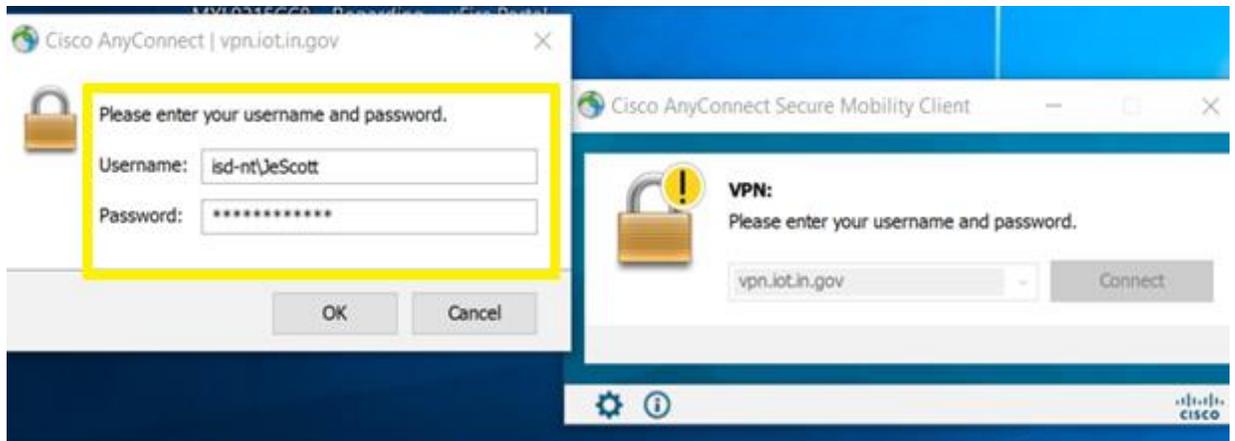

2. Once you launch the app, enter the following address on the 'Ready to connect' screen and press 'Connect.'

- a. **vpn.iot.in.gov**

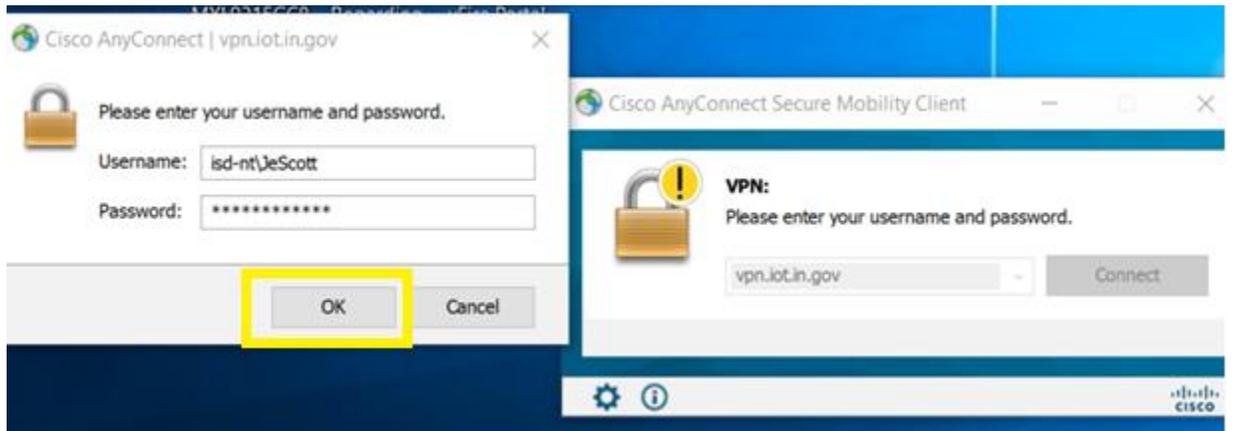

3. In the box that opens, enter the following:
 - a. Username: *domain**username for your 'standard' account*
 - b. Password: *network password for your 'standard' account*

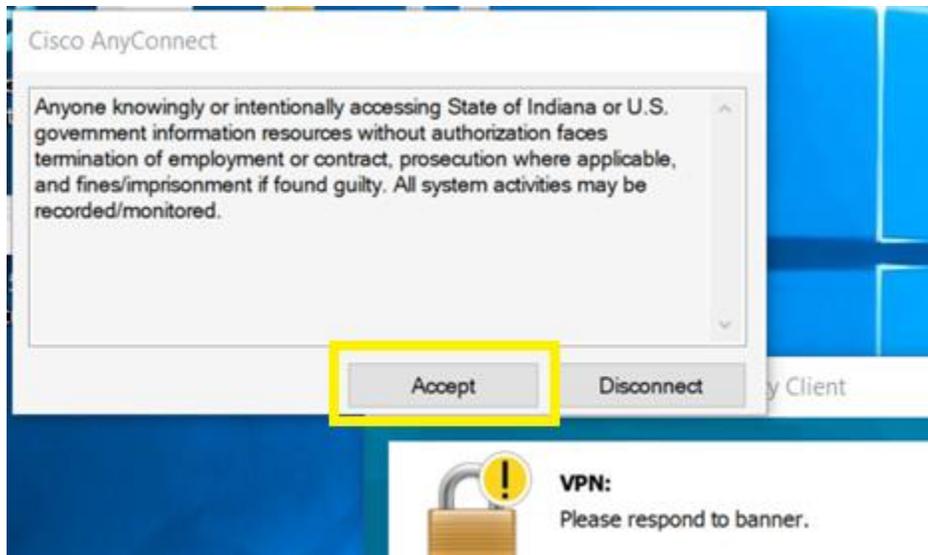

PLEASE NOTE: Your **domain** usually appears below your credential box when you first go to login every morning.

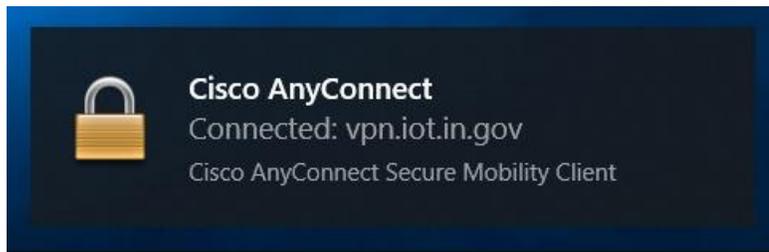

4. Press 'OK'

5. That prompts your Multi-Factor Authentication (MFA) communication contact. This is based on what you previously established when registering for the Self-Service Password Manager (MFA/SSPR).
6. Once you complete your MFA, click on 'Accept' on the box that appears.

7. This will process the connection.
 - a. During this time the application will check to see if there is a more recent version of the client.
8. You should be able to confirm the connection status by checking in the Hidden Icons of your System Tray.
 - a. You should then see a 'Connected' notification appear in the lower-right of your screen.

- b. Additionally, when connected, you can further confirm successful connection to the network by locating the initial Cisco AnyConnect icon.
 - i. This should appear in either the Hidden Icons section or other points in the System Tray with a closed lock over it.
