**Trauma & Injury
Prevention**

The Indiana Trauma Registry (ITR) monthly report is a dashboard style report for the Indiana Criminal Justice Institute (ICJI) and any other party concerned about trauma in Indiana. This report highlights the four data quality measures for the ICJI grant: completeness, timeliness, uniformity, integration and accessibility. This report uses data within the ITR, with an emphasis on motor vehicle collisions (MVC).

Completeness

The Hospital Discharge database, also maintained by the ISDH, contains all records of patients cared for in Indiana hospitals. We compared patient records from the ITR with the Hospital Discharge database to know how complete is the ITR's data. The hospital discharge database is 69% complete.

Timeliness

Timeliness increases as facilities wait until the data submission deadline to submit data to the ITR. Hospitals are asked to report data on the national trauma (TQIP) reporting schedule. The average timeliness in the past year was 120 days.

Uniformity

In October, there were 26 participants from 22 (17% of hospitals with EDs in Indiana) hospitals who completed the quiz. The percent correct was 67% and the free-marginal kappa was 0.50.

Activities to improve the uniformity of data include trauma registrar training throughout the state and at the Indiana Department of Health.

Integration

The number of linked EMS to trauma cases was 1,639 for Q3 2018 data. Trauma data are due on a quarterly basis.

Accessibility

There was 1 aggregate requests in October. There were no identifiable data requests.
