BOARD OF STATE HOUSE COMMISSIONERS

STATE HOUSE PLANS

Hard Copy = 1983034

Microfilm = 1983035

The plans that are microfilmed in this series are the surviving plans that were utilized in the construction of the new State House between 1878 and 1888.

The bulk of the plans were created by the two Chief Architects on the project, Edwin May (1878-1879) and Adolf Scherrer (1879-1888). Most of the plans fall into four separate listings as follows: (1) Proposed plans that were not selected by the Board (2) Lucidus Ordo plans (code name given to Edwin May's pre-contract proposal) (3) Edwin May (after contract selection) and (4) Adolf Scherrer. A single plan may be duplicated into several media including, besides the original, tracings, blueprints, and/or electro-static copies.

list The plans are arranged on microfilm according to the architect's lists described above and then subdivided by the architect's plan number within ~~the~~ *each* series. All of the Proposed plans that were not selected by the Board appear first followed by the plans drawn by May and then those drawn by Scherrer. A group of miscellaneous plans not belonging to any of the four listings follows the Scherrer plans. Each distinct plan is targetted individually based on the plan index as shown in the following graphic:

use white board and strip in standard wording;
determine size of board so that size of type can be determined.
standard mounted numbers placed in outlined boxes.

Since many of the plans are extremely large it has been necessary, in numerous instances, to microfilm them in sections. Each section frame is identified as to its relative position in the entire plan by standard directional symbols based on north, south, east, and west.

The plans have been indexed for ease of retrieval according to sheet number, consecutive plan number, description and content of each plan, the plan number assigned by the architect, the scale of the plan, the creating architect, the date of creation, media, and the microfilm roll and frames on the microfilm roll where the plan is located.

There are 383 individual sheets but only 261 sets of unique plans because of duplication of plans in different media.
