Primary and secondary 24-hour TSP standards were established in April 1971 at a level of 260 and 150 micrograms per cubic meter (ug/m³) (36 FR 8186). All other areas of Indiana not listed above were designated attainment/unclassifiable under the 24-hour TSP standards.

Attainment of the 24-hour TSP standards was determined by evaluating the second maximum 24-hour values which was not to be exceeded more than once per year. U.S. EPA replaced the primary and secondary 24-hour TSP standards with primary and secondary 24-hour PM₁₀ standards in July 1987 (52 FR 24634).

State implementation plans for the nonattainment designations for the counties/areas listed above were never followed through with due to the replacement of the 24-hour TSP standards with 24-hour PM₁₀ standards.
