**2015 Screening Levels Tables Now Available**

February 27, 2015

A link to IDEM’s 2015 screening levels tables (Tables A-6 and A-7) is, or will soon be, available on the risk-based closure web page at https://www.in.gov/idem/cleanups/2392.htm. As noted on page 10 of the Remediation Program Guide, a six-month transition period applies to the new tables.

The 2015 version of Table A-6 includes all of the chemicals found in the 2014 table except 1,2 dichloroethylene (mixed isomers) which has been removed. The 2015 version of Table A-6 contains new entries for the following 21 chemicals: azodicarbonamide, barium chromate, calcium chromate, 1,3-dibromobenzene, guanidine, guanidine chloride, lead chromate, lead phosphate, manganese (non-diet), nickel acetate, nickel carbonate, nickel hydroxide, nickelocene, PCB: aroclor 5460, perfluorobutane sulfonate, potassium perfluorobutane sulfonate, sodium dichromate, strontium chromate, styrene-acrylonitrile (SAN) trimer, sulfur trioxide and triethylene glycol.

Because U.S. EPA updated the ingestion and dermal exposure factor assumptions used to calculate the regional screening levels, most of IDEM’s 2015 screening levels also changed. Most of the observed changes are relatively minor with respect to the primary risk driving chemicals.
