

Indiana Department of Environmental Management

2025 Annual Compliance Report

for Indiana Public Water Supply Systems

IDEM Drinking Water Branch

June 2026

Introduction

The 1996 Amendments to the Safe Drinking Water Act require each state to prepare an annual report of violations of the national primary drinking water regulations for public water supplies. The annual reports are intended to provide a summary of violations of maximum contaminant levels (MCL's), treatment techniques, variances and exemptions¹, and monitoring and reporting violations (M&R). This report includes information for the time period January 1, 2025 through December 31, 2025.

Public Water Supply Information

Graph 1. Number and Type of Public Water Systems in Indiana

Approximately 3,947 active public water systems supply water in Indiana. Graph 1 shows the distribution of public water systems by the system type. Drinking water in Indiana comes from ground water sources via wells or surface water sources such as lakes and rivers. Some public water systems purchase water from other public water supplies and distribute the water to their customers. Ninety-seven percent (97%) of all public water systems are served by ground water systems. However, only fifty-six percent (56%) of the total population is served by systems utilizing ground water.

¹ IDEM did not issue any variances or exemptions in 2025; therefore there are no violations for variances and exemptions to address in this summary report.

Drinking Water Monitoring Requirements

The Safe Drinking Water Act and the Indiana Public Water Supply Supervision Program mandate the monitoring and reporting of various bacteriological and chemical contaminants that may be found in drinking water. The contaminants are categorized as total coliform, nitrate (NO₃), inorganic chemicals (IOCs), volatile organic compounds (VOCs), synthetic organic compounds (SOCs), radionuclides (Rads), lead and copper (Pb/Cu), and Stage 1 and Stage 2 disinfectants/disinfection byproducts (D/DBPs) Rules. The levels of these contaminants in drinking water are compared to maximum contaminant levels (MCLs) which are set by the Environmental Protection Agency (EPA) and adopted by the State, to ensure that water is safe for human consumption. In addition, compliance results may trigger additional actions, such as source water monitoring under the Ground Water Rule (GWR) or public education for lead. See Table 2 on page 5 for a list of MCLs and action levels for all of the regulated contaminants.

Surface water systems are also required to comply with additional provisions of the Safe Drinking Water Act which deal with surface water treatment. These regulations pertain to treatment techniques that require systems to properly treat their water. When a surface water PWS fails to properly treat its water or cannot control the levels of such contaminants as turbidity, bacteria, viruses, or parasitic microorganisms the system has violated the provisions of the Safe Drinking Water Act and is assigned a treatment technique (TT) violation. Surface water systems are also required to sample for *Cryptosporidium* and/or *E. coli* under the Long Term 2 Enhanced Surface Water Treatment Rule (LT2) to determine if additional treatment is required to remove *Cryptosporidium*.

If a system has an MCL or TT violation, that system becomes a priority for follow-up by the Drinking Water Branch to ensure the violation is corrected.

Violation Summary

Table 1 provides a summary of the number of MCL, M&R, and TT violations for all of the regulated drinking water contaminants for the 2025 calendar year (January 1, 2025 - December 31, 2025). The table also provides a summary of the number of systems in violation for each contaminant group.

Table 1. 2025 Violations Summary for Indiana Public Water Supplies

		MCL		Treatment Technique		Monitoring & Reporting		Consumer Confidence Report	
		Violations	Systems In Violation	Violations	Systems in Violation	Violations	Systems In Violation	Violations	Systems in violation
CCR	CWS							139	126
Pb/Cu	CWS			10	8	131	107	PN Violations

	Total	1591

Total Number Of Violations	CWS	1212
	NTNC	1020
	TNC	2367
	Total	4599

LEGEND

MCL =Maximum Contaminant Level Violation	IOC =Inorganic Chemicals (10-12 Chemicals)	VOC =Volatile Organic Compounds (21 Chemicals)	NO3 =Nitrate
Pb/Cu =Lead and Copper	SOC =Synthetic Organic Compounds (27-30 Chemicals)	TCR =Total Coliform Rule	Rads =Radionuclides
DBP =Disinfection By-Products	SWTR =Surface Water Treatment Rule	CCR =Consumer Confidence Report	
TNC =Transient Noncommunity	NTNC =Nontransient Noncommunity Water System	CWS =Community Water System	

* This number represents the total number of systems in violations for 2025. However, this number includes some systems with multiple violations across contaminant groups and other violations not listed in the table.

An evaluation of the data in 2025 Annual Compliance Report (ACR) shows the in-compliance rates at about seventy-two percent (72%) for monitoring and reporting (M/R) violations, ninety-eight percent (98%) for MCLs, and ninety-four percent (94%) for TT violations. The majority of violations are related to failing to collect and/or report samples. Approximately twenty-eight percent (28%) of the total number of active water systems have sampling (M/R) violations for at least one contaminant, but more than half of those systems (51%) are transient public water systems with M/R violations for TCR/RTCR.

The total number of systems with violations showed a slight increase of four and sixty tenths percent (4.6%) in 2025, this is primarily due to the recent implementation of tracking Public Notices. In addition, the rise in other violations can be contributed to IDEM's continued efforts to improve statewide water quality. RTCR violations still make up the majority of violations issued due to having the greatest recurring monitoring frequency.

Continuous educational outreach and concentrated compliance assistance efforts made by IDEM staff have resulted in the continued decrease in amount of RTCR violations as illustrated here:

A key indicator of the quality of the drinking water is the Community Water Systems’ (CWSs) populations meeting current health-based standards. IDEM and EPA Region 5 agreed on a strategic plan with shared goals including tracking the percentage of population served by CWSs that meets current health-based standards. During 2025, the percentage was measured quarterly and the average for the four (4) quarterly results was ninety-eight and forty-five hundredths percent (98.45%) of the population served by CWSs in Indiana meets all health standards.

Consumer Confidence Reports

All community public water systems are required to develop and distribute to their customers a brief annual water quality report called a consumer confidence report (CCR). The community water system is required to deliver a copy of the CCR to its consumers by July 1st. The purpose of the report is to inform and educate customers on the status and quality of their public water supply. The report contains information on the sources of drinking water, the levels of any detected contaminants, and educational information regarding drinking water.

Compliance Assistance Efforts

The Drinking Water Branch currently assists public water supply owners and operators to promote compliance with the drinking water regulations. Assistance is provided through several activities, namely: site visits, correspondence, telephone contact (including the use of interactive voice response (IVR) and regular phone calls),

e-mails, educational presentations and materials, and implementation of the small system laboratory assistance program (SSLAP) where IDEM provides free sampling for very small, nonprofit systems serving a population of one hundred (100) or less. Additionally, with RTCR, field staff are handling all the Level 2 Assessments and Capacity Development staff are helping systems with the Level 1 Assessments. Another way IDEM reduces sampling violations is by reminding all public water systems of their required monthly, quarterly, semi-annual, or annual sampling by utilizing the IVR system, which leaves automated messages indicating when their sampling requirements are due. Further, IDEM also uses e-mails (when available) as another way to notify systems of when sampling is due.

The following is a summary of the number of site visits and assistance efforts that were conducted in 2025 by the Drinking Water Branch staff:

Sanitary Surveys	1,030
Well Site Surveys	84
Technical Assistance Visits	323
Cap. Dev. Assistance Interactions	2,976
IVR Calls & E-mails	59,683

The Drinking Water Branch continues to provide assistance to all public water systems as a means to ensure drinking water is protective of human health.

For More Information

If you have any questions concerning this report or would like the lists of public water supplies that had violations in 2025, please contact the Drinking Water Branch at (317) 234-7430. Additional copies of this report are available on the Indiana Department of Environmental Management, Office of Water Quality, Drinking Water Branch web-site at: <https://www.in.gov/idem/cleanwater/drinking-water/drinking-water-compliance-section/water-systems/water-system-owners-and-managers> or by calling the Drinking Water Branch at (317) 234-7430.

Additional information regarding the quality of your drinking water may be obtained by contacting your local public water supplier. Please contact your local public water supply for a copy of their latest consumer confidence report (CCR).

For more information regarding all aspects of the environment in Indiana, visit IDEM's website at: <http://www.in.gov/idem/>. Also, for general information regarding drinking water, you may contact the EPA Safe Drinking Water Hotline by calling (800) 426-4791.

TABLE 2
REGULATED CHEMICAL DRINKING WATER CONTAMINANTS
MAXIMUM CONTAMINANT LEVELS

Contaminant	MCL	Contaminant	MCL	Contaminant	MCL
Inorganic Chemicals (IOCs)	mg/l	Volatile Organic Compounds (VOCs)	ug/l	Synthetic Organic Compounds (SOCs)	ug/l
Antimony	0.006	1,1-Dichloroethylene	7	2,4-D	70
Arsenic	0.01	1,1,1-Trichloroethane	200	2,4,5-TP (Silvex)	50
Barium	2	1,1,2-Trichloroethane	5	Alachlor	2
