

APPENDIX D:
STATUS OF CATEGORY 4 WATERS (REVISED)

STATUS OF CATEGORY 4 WATERS AS OF APRIL 1, 2014

In accordance with U.S. EPA guidance (U.S. EPA 2005, 2006, 2009, 2011, 2013, 2015), Indiana's Category 4 waters are identified in Indiana's Consolidated List, which is included in Indiana's 2016 Integrated Monitoring and Assessment Report, Appendix I. Category 4 consists of impairments for which a Total Maximum Daily Load (TMDL) is not required. The subcategories of Indiana's Category 4 list are described below:

- Category 4A consists of impairments for which a TMDL has been approved by U.S. EPA and is expected to result in attainment of all applicable water quality standards (WQS).
- Category 4B consists of impairments for which other pollution control requirements are expected to result in the attainment of the WQS in a reasonable period of time.
- Category 4C consists of impairments that are not caused by a pollutant and as such, do not require a TMDL.

Categories 4 and 5 of IDEM's Consolidated List together provide the most comprehensive assessment of impairment of Indiana waters to date. With each 303(d) listing cycle, U.S. EPA requests an update on the status of Indiana's Category 4 waters to facilitate tracking of all known impairments. These impairments and their current status are discussed in the following sections.

CATEGORY 4A IMPAIRMENTS

Category 4A consists of impairments for which a TMDL has been approved by U.S. EPA and is expected to result in attainment of all applicable WQS. IDEM's progress in TMDL development since the 2014 cycle is discussed in the Notice of Comment Period for the draft 2016 303(d) list and the narrative accompanying IDEM's 2016 303(d) list submittal on April 1, 2016. This appendix has been revised since April 1, 2016 and is included with IDEM's addendum to its 2016 Integrated Report to provide a comprehensive update on all TMDLs approved to date and the impairments they cover. With the submittal of its addendum to the 2016 Integrated Report, IDEM has developed a total of one thousand seven hundred seventy seven (1,777) TMDLs, which have been approved by U.S. EPA.

Table D-1 provides a list of all TMDLs approved to date and a key for their corresponding impairments in Table D-2. Table D-2 also identifies any changes made to the assessment units previously listed in Category 4A. This information appears in the columns with updated assessment unit IDs and names where applicable.

Table D-1: TMDLs approved as of IDEM's submittal of the addendum to its 2016 Integrated Report.

CATEGORY 4B IMPAIRMENTS

Category 4B consists of impairments for which other pollution control requirements are expected to result in the attainment of the WQS in a reasonable period of time. As of 2010, IDEM's Category 4B list contains a total of ten (10) impairments. IDEM did not add any impairments to Category 4B for the 2016 cycle.

IDEM originally placed the impairments identified in Table D-3 in Category 4B in 2002 based on evidence that the electric generating facilities discharging to these waters were responsible for the thermal impairments identified. The facilities in question have NPDES permits for with thermal discharge limits based on site-specific standards and have contested this decision based on annual reports they had submitted indicating no detrimental effects from their discharges. As a result of this apparently contradictory information, IDEM determined that that additional study was needed to determine whether the monitoring and reporting requirements under section 316(a) were sufficient to ensure a well balanced aquatic community of waters outside the mixing zone.

Through an Interagency Agreement with IDEM, the U.S. Fish and Wildlife Service developed a report entitled, "Evaluation and Assessment of Fish Assemblages Near Electric Generating Facilities: with Emphasis on Review of Discharge Submitted Data, Development of the Standard Operation Procedures, and Traveling Zone Assessment." The objectives of this study were:

- To evaluate the information submitted by the thermal discharge permittees for compliance with 316(a) requirements;
- To develop standard methods that would provide industrial contractors specific protocols for use in meeting permit monitoring requirements for their heated effluents;
- To conduct traveling zone studies of discharge relationships from selected thermal generating facilities, including specifically two of the three facilities to which the above impairments were attributed.

IDEM reviewed the results of this study and determined that additional monitoring and reporting requirements were necessary under Section 316(a) of the Clean Water Act (CWA) and Indiana Administrative Code 327 IAC 5-7 to ensure a well balanced aquatic community of waters outside the mixing zone. In 2006 and 2007, IDEM renewed permits for most electric generating facilities, which included additional conditions that require the permittees to submit a new 316(a) demonstration/variance request with the renewal application for their next NPDES permit cycle. In order to be granted a 316(a) variance, these facilities must include a site-specific biological study plan in their request that demonstrates that the variance will not result in biological impairment outside the mixing zone.

IDEM recently developed a guidance for permittees requesting a 316(a) thermal limits variance in their NPDES permit: “*Guidance for Conducting a Demonstration as a Requirement of a 316(a) Alternative Thermal Effluent Limitation Request*”. This document contains the guidance necessary for completing an application for alternative thermal effluent limitations, a Type I, II, or III Demonstration, and sampling and monitoring consistent with associated standard operating procedures. A demonstration for alternative thermal effluent limitations, in accordance with section 316(a) of the CWA and 327 IAC 5-7, should provide IDEM with adequate information to establish alternative thermal effluent limitations that will ensure the protection and propagation of a Balanced, Indigenous Community (BIC) in and on the waters into which a thermal discharge is made. IDEM’s guidance document is currently under internal (IDEM/U.S. EPA) review. In the meantime until IDEM begins full implementation of its approach to issuing 316(a) thermal variances, when NPDES permits with existing 316(a) thermal variances come up for renewal, IDEM is adding year round alternative thermal limits (if they do not already exist) to the permit until a complete revised 316(a) application can be submitted and evaluated.

With regard specifically to Turtle Creek Reservoir, IDEM did not renew the 316(a) thermal variance the Hoosier Energy – Merom Generating Station NPDES Permit at the time the permit was up for renewal (December 22, 2010). The facility was instead given a three-year schedule of compliance to meet the thermal water quality standards found in rule but were unsuccessful. The facility entered into an Agreed Order that was adopted on December 30, 2013. The Agreed Order requires the facility to submit a 316(a) study plan for review and comment in the spring of 2014.

Table D-4 identifies Category 4B impairments attributed to other sources. These waters were placed on in Category 4B in 2004. The identified impairments were attributed to the Picnic Wood Wastewater Treatment Plant, owned by LMH Utilities Corporation and are presently being addressed through IDEM's NPDES program. While the plant continues to have sporadic issues related to maintenance problems, it has maintained an approximately 95% compliance record since the original enforcement case was closed in 1996. In addition, LMH Utilities Corporation completed upgrades to its facility in late 2007, and IDEM inspectors report no recent enforcement issues. It is anticipated that these upgrades will result in the attainment of water quality standards within a few years. However, these impairments will remain in Category 4B through the 2018 303(d) listing cycle to allow time for biological communities to recover and for IDEM to conduct the monitoring necessary to verify that their impairment no longer exists.

CATEGORY 4C IMPAIRMENTS

IDEM did not add any impairments to Category 4C for the 2016 cycle. To date, Category 4C consists of twenty five (25) impairments that are not caused by a pollutant and as such, do not require a TMDL. These are impairments resulting from stressors for which a load cannot be calculated. Category 4C impairments and their sources are shown in Table D-5. Although a TMDL is not required for these impairments, IDEM may conduct additional monitoring on these waters through its rotating basin monitoring schedule.

Table D-5: Indiana's Category 4C impairments.
