SECTION E

ENVIRONMENTAL IMPROVEMENT INITIATIVE RESULTS

Why do we need this information?

Facilities need to share the results of the environmental improvement initiative that was pursued during the reporting period. IDEM needs to report cumulative program reduction results.

What do you need to do?

Reference Section F for "Category" and "Indicator" options to complete this section. Summarize your facility's progress on achieving the initiative you identified in the application or last year's APR. For assistance, please call (800) 988-7901 or email esp@idem.IN.gov.

Initiative #1			
Category 1: <u>Material Procurement</u>	Baseline	Current	Cost Savings
Indicator 1: <u>Recycled Content</u>	(indicate measurement unit)	(indicate measurement unit)	
Calendar year	2015 (gallons)	2016 (gallons)	\$168,202.00

Actual quantity (<i>per year</i>)	63973 gallons	27110 gallons	\$168,202.00
Production unit (<i>select one</i>)	Earned Labor Hours Engines Produced Production units Production lbs. Other -- specify (e.g. Gallons, length, etc.)		
Production Quantity	16112	15132	NA
Normalization factor (Current year production ÷ Baseline year production) 0.939			
Normalized quantity (Actual current year quantity - Actual baseline quantity) x Normalization factor -34614 gallons x 7.28 = 252,039.69 pounds			

Briefly describe *how* you achieved improvements for this environmental initiative or, if relevant, any circumstances that delayed progress.
 In January 2016, CAT Reman in Franklin Indiana implemented an oil reclamation process to reduce oil consumption and waste. The previously used process involved pumping our used engine oil into a large holding tank. The tank, approximately 2500 gallons, that housed the used oil would then get pumped out approximately once per week, whereupon it would be transported over state lines to be disposed of and partially recycled. The reclamation project involved installing a new used oil tank and a series of filtration mechanisms. One of the filtration units was equipped with a water removal mechanism and a particulate filter for wear metal removal. Another filtration unit was installed on a continuous loop within the used oil tank. Used process oil was returned to the used oil tank. The oil was cleaned by means of the filter series and pumped into a clean oil tank. The clean oil was then reused in process. Virgin oil was reintroduced to the system as needed. This new process enabled the plant to clean and reuse in-process oil, greatly reducing used oil transport, and reducing oil waste and oil spend by over 50%. There were some project delays throughout the year that revolved around filter maintenance.
