

Cyanide Copper Plating Conversion

Tim Miller, Sr Exper Chem/Metallurgist

Cyanide Copper Plating

- For decades, Allison and most others, used a process for copper plating that utilized cyanide as the metal chelating agent.
- Cyanide has serious potential health and environmental issues.
- Housekeeping and worker safety became major concerns.

Cyanide Copper Plating

Cyanide Copper Plating

Non-Cyanide Copper Plating

- Discussions regarding the feasibility and quality concerns of non-cyanide copper plating had taken place for several years.
- Several test pieces from small scale users were produced and tested.
- New ownership accelerated the plan.
- Project was completed in April 2009 with funding from ATI, the military and IDEM's Partners for Pollution Prevention program.

Non-Cyanide Copper Plating
