On April 28, 1971, United States Environmental Protection Agency (U.S. EPA) established primary and secondary 24-hour TSP standards at a level of 260 and 150 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$) ([36 FR 8186](#)). All other areas of Indiana not listed above were designated “attainment/unclassifiable” under the 24-hour TSP standards.

Attainment of the 24-hour TSP standards was determined by evaluating the second maximum 24-hour values which was not to be exceeded more than once per year. On June 2, 1987, U.S. EPA replaced the primary and secondary 24-hour TSP standards with primary and secondary 24-hour coarse particulate matter (PM_{10}) standards ([52 FR 24634](#)).

On July 1, 1987, the 24-hour TSP standard was replaced by the 24-hour PM_{10} standard.
