Ok, I just learned how to do this and added the password "NPS" to the file. Fingers crossed.

Now I'm getting this message: IOT has quarantined a message addressed to you due to the restricted attachment file type. If you need to receive this file, please have the sender resend using a password protected zip file. I will have to contact our IT department to see how we can get around it, if you are unable to send it the way the message suggests.

Oh interesting... Let me try attaching it differently since this could be a OneDrive linking issue. Thank you for your persistence. I will post the zip file to our website if this doesn't work.

Best,
Melanie

Subject: RE: [EXTERNAL] RE: Alternate version of consultation spreadsheets.

When I click on the file, a dialog box comes up with a few options to choose from in Outlook. When I choose open, I'm taken to a Microsoft Office 365 SharePoint Online page where it says "AADSTS50177: User account 'JBoling@idem.IN.gov' from identity provider '<https://sts.windows.net/2199bfba-a409-4f13-b0c4-18b45933d88d/>' does not exist in tenant 'DOI' and cannot access the application '00000003-0000-0000-0000-000000000000' (Office 365 SharePoint Online) in that tenant. The account needs to be added as an external user in the tenant first. Sign out and sign in again with a different Azure Active Directory user account."

Ok, did you try downloading (and then renaming) the "piz" file that was attached to the first email in this string? If you are not seeing that maybe your email system did not let it come through?

Thanks,
Melanie

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

I know that the zip file that you sent earlier did not work so you can try renaming it.

Hi Jean,

I am so glad that the pdf finally came through. Was this re-naming trick for the spreadsheets successful or should I post the zip file for you to download? Again, I am very sorry that this transfer of information has become a challenge and appreciate you working through it with us.

Best,
Melanie

Subject: Alternate version of consultation spreadsheets.

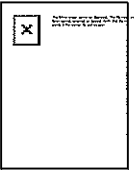

Hi again,

Now I am going to try sending the spreadsheet zip file renamed with a ".piz" extension. If this comes through, please edit the file extension to ".zip" and then you should be able to extract the files. We have to do this when emailing compressed files to the EPA. Apologies for all of the hoops - if this is not successful I will post the files to a webpage temporarily.

Best,
Melanie

I might only be able to share internally that way...

Here's the .pdf. It's 6mb, so maybe the size is an issue. See if this one will work.

That must be what's happening. The attachments appears as one single attachment, the same way it did in your first email. Unfortunately we are unable to open it. Maybe the link will work. I'm happy to try it.

There should have been 3 files attached to the original email:

Word document with comments (the one I resent this morning)
PDF of PowerPoint slides from the consultation call
zip folder with calculation spreadsheets.

Jean,

Hmmm, is it all of the attachments, or just one in particular? I'll attach the main comment doc here again to see if it works now.

Sorry they are not opening for you. Thanks for working through this with us!

Subject: Consultation Comments on the Draft Indiana Regional Haze SIP

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. ****

Hello Jean,

The National Park Service (NPS) appreciates the opportunity to review the Indiana Department of Environmental Management's (IDEM's) May 18, 2021, federal land manager (FLM) review draft of the Indiana Regional Haze (RH) State Implementation Plan (SIP) for the Second Implementation Period (2018-2028). This email summarizes the consultation call we had in coordination with the other FLM agencies on July 14, 2021, as well as our staff-to-staff email correspondence and detailed analysis of several SIP components. As such, this email and supplementary attachments serve as documentation of NPS conclusions and recommendations resulting from formal regional haze consultation as required by 42 U.S.C. §7491(d).

While Indiana does not contain any NPS managed Class I areas, emissions from sources in the state affect visibility at Mammoth Cave National Park in Kentucky, Great Smoky Mountains National Park in North Carolina and Tennessee, and Shenandoah National Park in Virginia. We appreciate your continued involvement in LADCO and commend Indiana for putting together a well laid out and detailed SIP, and for engaging early in the process with the NPS.

Consistent with the FLM consultation requirements found in 42 U.S.C. §7491(d), a summary of our conclusions and recommendations for the Indiana haze SIP are as follows:

- Source Selection:
 - We agree that IDEM applied a reasonable method for source selection that resulted in a reasonable set of sources to address in the SIP.
- Electric Generating Units (EGUs):
 - It is not reasonable for IDEM to exempt EGUs from four-factor analyses. We recommend IDEM conduct four-factor analyses for EGUs within the state and include these in the draft RH SIP.
 - Based on initial NPS analyses, there may be cost-effective controls for some of the Indiana EGUs, including (but not limited to) Alcoa Unit 4, Clifty Creek and Petersburg. (Specific measures and requests for EGUs are discussed in section 2 of the attachment "National Park Service (NPS) Regional Haze SIP feedback for the Indiana Department of Environmental Management (IDEM)".)
 - Any EGU shutdowns relied upon in the SIP should be made federally enforceable.
- Non-EGUs:
 - IDEM found cost-effective controls for several non-EGUs but is not including any of these emission reduction measures in the draft SIP.

- We request that IDEM incorporate these cost-effective controls for non-EGUs identified through the four-factor analyses, including the Alcoa Warrick facility, the Burns Harbor facility, and Greencastle Cement (specific measures and requests are discussed in section 3 of the attachment "National Park Service (NPS) Regional Haze SIP feedback for the Indiana Department of Environmental Management (IDEM)").
- We recommend that the emission controls evaluated in the four-factor analyses may be even more cost-effective than estimated by IDEM due to analysis errors that inflated the costs. These analysis errors should be corrected.

Detailed information to support our review, conclusions, and recommendations is provided in the narrative below and in the attachments (see list below).

The EGUs warrant consideration in this planning period for several reasons. First, we disagree with IDEM's assertion that the EGU sector was evaluated in detail for the first implementation period of the Regional Haze Rule. Instead, Indiana's EGUs were subject to the Clean Air Interstate Rule (CAIR) and its successor, the Cross-State Air Pollution Rule (CSAPR). Under CAIR/CSAPR, individual EGUs were not evaluated for their SO₂ or NO_x emissions.

Second, IDEM's decision to exclude EGUs but evaluate non-EGU sources is an inconsistency in decision-making for these sources. Of the facilities required by IDEM to conduct four-factor analyses, Alcoa Warrick Operations had the highest Q/d at 80.9. However, three EGUs have a higher Q/d values, but were not required to conduct four-factor analyses (AEP Rockport, 259.5; Gibson, 134.8; AES Petersburg, 83.7). Of the facilities required by IDEM to conduct four-factor analyses, SABIC – Mt. Vernon had the lowest Q/d at 5.3, which is lower than the Q/d of every EGU selected by IDEM but exempted from four-factor analysis. This highlights the disparity in the IDEM treatment of emission sources which were all reasonably selected as potentially affecting visibility at Class I areas.

Third, EGUs are the biggest Indiana emitters of haze-causing pollutants affecting NPS Class I areas. LADCO modeling results show that Indiana EGUs contribute significantly to visibility impairment at multiple Class I areas. Indiana EGUs account for 7% of total visibility impact at Mammoth Cave NP one of the most visually impaired NPS Class I areas. Based on the Area of Influence (AOI) analyses completed by VISTAS, five of the top ten facilities impacting Mammoth Cave NP are Indiana EGUs. We conclude that this is a significant contribution to haze at Mammoth Cave NP and should be considered in this round of haze planning.

Fourth, while it is difficult to make an assessment without four-factor analyses, we were able to identify potential cost-effective controls based on available information for several of the facilities. (Please see the attachments for details and specific recommendations.) Complete four-factor analyses would likely identify further cost-effective controls on Indiana EGUs. We recommend that Indiana require four-factor analyses for all EGUs in its original list that don't have *federally enforceable* retirement dates on-the-books.

Finally, IDEM identified several cost-effective controls in their four-factor analyses yet determined that these controls were not necessary "considering the significant progress already made towards achieving the national visibility goal." We note that the 2017 preamble to the Regional Haze Rule, the August 2019 Guidance, and the recent July 2021 clarification memo all clearly state that having made significant progress (i.e., being below the uniform rate of progress (URP)) is not a "safe harbor" that can be used to dismiss otherwise reasonable controls. Furthermore, the visibility benefit of emissions reductions from individual facilities is not one of the four statutory factors that should be considered in reasonable progress determinations.

Please know that we welcome the opportunity for further dialogue with you as Indiana progresses to a final SIP revision. If you have any questions, do not hesitate to reach out to us. Also, feel free to let us know if you have any edits to this summary and especially if any corrections are needed.

Best,

David

--

Good morning Don,

The existing federal rules along with Indiana's Nitrogen Oxide Rules been instrumental in getting EGU sources to use their NO_x emission controls more since 2016. The resulting reduction in emissions is part of the reason Indiana has chosen to wait to bring forward the EGUs for four-factor analysis. As mentioned in the state's RH SIP, the industry-wide emission control measures mandated by strict regulations and far less reliance on coal over the past decade or more due to alternative power generation; numerous shutdowns and fuel conversions of boilers have reduced NO_x emissions by tens of thousands of tons in Indiana and additional reductions are expected as a result of federal regulations to be implemented over the course of the next few years (such as the revised CSAPR Update). As such, IDEM intends to evaluate EGUs more in depth for the third implementation period of the RH Rule and defer any additional requirements for these units until then, when that evaluation is completed as part of Indiana's RH SIP for the third planning period.

Subject: NOx emissions at the Petersburg power plant

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. ****

Good morning, Jean,

I have a similar question regarding Petersburg.

Graph 6-2 shows the unit-by-unit comparison of NO_x emissions at the Petersburg power plant. There are significant projected decreases in NO_x emissions with the retirement of Units 1 and 2 and modest NO_x emission reduction from Units 3 and 4 as observed from actual CAMD data for 2011 and 2016 and ERTAC's projected 2028 emissions.

Why are NO_x emissions expected to decrease if utilization is expected to increase? Looking at AMP data over the past few years shows a pronounced decrease in NO_x emission rates at Petersburg. Is there some IDEM "on-the-books" requirement that is driving this decrease? If not, would IDEM consider a requirement that EGUs make better utilization of emission controls?

thanks,

Boling, Jean

Subject: Clifty Creek question

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. ****

Good morning, Jean,

I would appreciate it if you would help me with this question. The statement below from your draft SIP appendix on EGUs says that utilization will increase, with a resulting increase in SO₂ emissions, but NO_x emissions will decrease--how would that happen?

Clifty Creek 2028 EGU NO_x emissions are projected to be reduced by 59% or 5,534 tons from 2016 emission levels and SO₂ emissions are expected to increase slightly, by 6% or 286 tons from 2016 to 2028. The ERTAC model projects small increases in utilization at the facility for all six units.

thanks,

Boling, Jean

Hello All,

We are looking forward to the NPS/Indiana Regional Haze Consultation Call this afternoon. Please see a working agenda below and feel free to suggest additional items. NPS is planning to share a powerpoint presentation during the call so please join using Teams if possible. If not, there is a phone line also listed in the invitation.

Best,
Melanie

Agenda:

- Welcome & Introductions
- NPS Regional Haze Background
- NPS Class I Areas affected by Indiana
 - Shenandoah, Great Smoky Mountains, and Mammoth Cave NPs
- NPS SIP Feedback for Indiana
 - Engagement
 - Source Selection
 - Source Sector Comments
 - EGU, Steel Mills, Cement
 - Long Term Strategy
- Next-Steps

Subject: ERTAC model

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. ****

Good morning, Zac,

I wanted to send you these questions so as not to catch you by surprise on our call this morning.

We have been reviewing Indiana's draft RH SIP which contains extensive references to ERTAC modeling which predicts how some EGUs will respond to retirement of other EGUs. As you know, EGUs are in an ongoing state of flux, and keeping up with retirements is a major challenge. For example, in April 2021, AEP announced that Rockport's Unit 2 will also be retired by the end of 2028. So, my questions are:

- How up-to-date is the ERTAC EGU model?
- How much time and effort are required to update the model?
- Is LADCO planning to update the ERTAC EGU model for the 2023 mid-term progress reports?

thanks,

Boling, Jean

Subject: FYI - EPA R5 invited to consultation call

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. ****

Hello Jean,

I invited Alisa Liu to sit in on our NPS/IN RH consultation call next month. She asked if it was OK for her to invite some additional EPA-R5 staff. I said that it was OK with me and I would let you know and see if you have concerns. If you do have concerns let me know and I will un-invite them or ask them to send a single representative. In other consultation calls I have participated in this year EPA sometimes listens in but very rarely speaks up unless called on. I expect this would be the same. Hope all is well.

Best,
Melanie

Hello Jean,

As we just discussed by phone it would be a great relief to the NPS RH team if we could extend our regional haze consultation deadline with IN to 7/23. That will give us the time we need to thoroughly review your draft SIP and work around the leave plans of staff around the fourth of July holiday.

If possible, I would like to reschedule our call currently set for 6/24 to the week of 7/12 and then follow up with our written comments and documentation by 7/23. Some potential meeting times are listed below, if none of these work feel free to suggest an alternative or to call me so that we can figure it out together. I appreciate your flexibility and hope all is well.

Best,
Melanie

Potential times dates for a rescheduled NPS/IN RH Consultation Meeting:

- Tuesday 7/13
 - 12-1pm ET (10-11am MT)
 - 3-4pm ET (1-2pm MT)
- Wednesday 7/14
 - 10-11am ET (8-9am MT)
 - 2-3pm ET (12-1pm MT)
 - 3-4pm ET (1-2pm MT)

Hello Jean, Trent,
It would really be better for the NPS team if we can wait and meet the week of June 21st. We are reviewing several other state SIPs right now and need additional time to prepare for an Indiana focused call. Feel free to go ahead and schedule your meeting if you need to move forward more quickly. If you do this I would love to listen in. Thanks for understanding.
Best,

Melanie

p.s. The week of 6/21 our best openings are:

- 6/22
 - 1pm-2pm ET (11am-12pm MT)
 - 2pm-3pm ET (12pm-1pm MT)
 - 3pm-4pm ET (1pm-2pm MT)
- 6/24
 - 12pm-1pm ET (10am-11am MT)
 - 3pm-4pm ET (1pm-2pm MT)

Good morning, Trent.

Please address comments to me and see the dates and times our team can meet below.

6/14
8-11 am and 12-2 pm

6/15
8 am - 1 pm

6/17

8-10 am and 12-3 pm

6/18

8-10 am and 12-3 pm

Thanks.

Jean

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. ****

Hi Jean

I hope you are well.

A couple quick things:

- I am working on our comment letter. Who do you want it addressed to?
- Also do you have some time to touch base in a couple weeks to go over our comments? I know the other FLMs are at a point where we probably can't meet until the week of 6/14. Does IN have any availability that week?

Thanks

Trent

Hi David,

I apologize for not getting back to you sooner. Is that 3:00 p.m. for Indiana, EST? If so, we are all available at 3:00 p.m. Both Mark and Susan have a meeting at 1:00 p.m. (EST) that day.

Thanks.

It looks like Tuesday 6/16 at 2 Central/1 Mountain works for all our people. If that's good for you, go ahead and put it on your calendar and let me know. I'll get a conference call number and send out an appointment.

Thanks!

Hi Jean,

I hope this note finds you well! I heard your update on Regional Haze progress during the most recent LADCO call. My NPS colleagues and I would love to talk with you soon to learn about which sources Indiana has identified for Regional Haze 4-factor analysis and how those are progressing (if they are underway). Would you have time for an informal check-in phone call during the second or third week in June? As of now, we have good availability on Wednesday June 10th or Tuesday/Wednesday of the following week (6/16, 17). If those dates are not good for you (or if you aren't ready to talk) please let me know and we will adjust accordingly.

Thanks!

David

Good afternoon everyone,

I have been unable to figure out how to send Appendix C to you all because the file is too big. As a result, IDEM has decided not to include it as part of the FLM/EPA review at this time. Appendix C will be available for review during the public comment period when it is posted to IDEM's website. Until then, one of the back trajectories included in the file is shown below to provide an example of what to expect.

We apologize for the inconvenience.

Good afternoon everyone,

Below is a link to Indiana's draft regional haze state implementation plan for the second planning period document and appendices for your review. I recommend downloading the files prior to opening them to maintain formatting, which will make them easier to read. If anyone has any questions or concerns that you would like to discuss with our project team, please let me know and I will set up a conference call meeting for us to discuss them with you. Otherwise, please send all comments to me as soon as your review is complete.

Good morning,

Sorry to bother you again. I pulled the 2017, 2018 SO₂ emissions for Lehigh from the Table below, which was in the Indiana Cement Kilns Four Factor Analysis. You sent me a new tables for both Sabic and Lehigh that included the 2019 emissions. The emissions for Sabic match up, however the tables for Lehigh have different data. The SO₂ emissions in the attached PDF show 306 (2017), 312 (2018), and 246 (2019). I'm not sure which values I should use. Thanks.

Table 4-2 Lehigh and Lone Star Kilns NO_x and SO₂ Emissions and Throughput

Inventory Year	LEHIGH CEMENT COMPANY, LLC			LONE STAR INDUSTRY, INC DBA BUZZI UNICEM		
	Actual Throughput	NO_x Emissions (ton/yr)	SO₂ Emissions (ton/yr)	Actual Throughput	NO_x Emissions (ton/yr)	SO₂ Emissions (ton/yr)
2008	616064	1603.62	745.97	1274148	1726.36	500.46
2009	577076	1563.28	698.58	1318451	2012.33	410.76
2010	610039	1527.39	719.56	1122421	1763.10	208.76
2011	563803	1833.23	949.57	1083141	1746.21	167.76
2012	676583	2162.70	1108.30	1090071	2118.19	158.82

Subject: Re: Emissions Data for Regional Haze SIP

Good afternoon Leslie,

Please find Indiana's draft cement kiln and iron and steel mill, aluminum production, and plastics manufacturing plants four-factor analysis documents and appendices for the second implementation period Regional Haze State Implementation Plan (RH SIP) attached in response to your request to provide the annual SO₂ emissions from Lehigh Cement Company LLC, Mitchell Plant (Essroc Cement Corp) and Sabc Innovative Plastics Mt. Vernon LLC for 2017, 2018, and 2019. The Lehigh Mitchell Plant analysis is included in the Nitrogen Oxides and Sulfur Dioxide Four-Factor Analysis for Cement Kilns (files attached to this email) and the SABIC Mt. Vernon Plant analysis is included in the Nitrogen Oxides and Sulfur Dioxide Four-Factor Analysis for Iron and Steel Mill, Aluminum Production, and Plastics Manufacturing Plants (files attached to the Part 2 email following this one). These four-factor analyses evaluate the highest emitting NO_x and SO₂ emission units at Indiana sources selected for the RH SIP four-factor analysis for the second implementation period. The visibility analysis and determination for whether new control measures will be required are not included in these documents; however, they will be addressed in Indiana's RH SIP for the second implementation period document. In addition, the Lake Michigan Air Directors Consortium Organization (LADCO) (Regional Planning Organization) is conducting source apportionment modeling for LADCO states. This includes Indiana's cement manufacturing and plastics/resins emission sectors for more source specific results, which will be included in Indiana's RH SIP document as well.

Please feel free to contact me if you have any questions.

Best Regards,

Jean Boling

Subject: Emissions Data for Regional Haze SIP

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. ****

Good morning,

I am working on language to include in the Kentucky SIP to justify why certain facilities impacting the Mammoth Cave Class I area were not asked to perform a four-factor analyses. There are two particular facilities that were shown to be just above the 1% threshold that was set for our PSAT modeling. There were other Indiana facilities that were shown to significantly impact Mammoth Cave that were identified in the letter sent by VISTAS on our behalf back in June of last year. However, we feel that these two facilities do not significantly impact the area enough to warrant a four-factor analysis. I was hoping you could provide the annual SO₂ emission for these two facilities for the years 2017, 2018, and 2019. This information would help me calculate a new impact percentage based off of current data which will hopefully put the contribution below the 1% threshold. If there is any other information you think would be useful, closures, installation of control equipment at either of these facilities, I would appreciate the information. The two facilities of interest are:

Sabic Innovative Plastics Mt. Vernon LLC (18129-7364611)
Essroc Cement Corp (18019-8198511)

Thank you in advance

Boling, Jean

Subject: [EXTERNAL] Indiana's RH SIP Cement Kiln Four-Factor Analysis Question

This email has been received from outside of DOI - Use caution before clicking on links, opening attachments, or responding.

Hello Don,

I hope this email finds you healthy and safe. Trent mentioned in the last LADCO RH SIP workgroup monthly conference call that you will be reviewing the cement kiln 4-factor analyses for the Federal Land Managers. Indiana's draft RH SIP cement kiln four-factor analysis document is currently under review by the cement kiln sources selected for four-factor analysis. This draft document does not include the visibility analysis because Indiana is awaiting source appointment modeling results from LADCO in order to complete this portion of the cement kiln four-factor analysis. The source apportionment modeling that LADCO is currently conducting for the states includes tagging for Indiana's point inventory sector groups. Indiana requested tagging for six groups related to its four-factor analysis selected sources in the source apportionment modeling. IDEM expects to receive the results from LADCO soon; however, the timing is out of our hands. Meanwhile, IDEM would like to know if you would like to go ahead and review the draft document, after the selected sources' comments are received and incorporated, without the visibility analysis or, if you would rather wait until IDEM completes the visibility analysis and includes it in the four-factor analysis document before it is sent to you for review? Please let us know which way you prefer.

Thank you, in advance, for your cooperation and assistance and have a great day.

Good morning Saeid,

Monday 8/24, 11:00 to 12 noon works best for us. IDEM uses Microsoft Teams for meetings. I can send out a Teams meeting invitation to our team and anyone you would like to be included, if you like. Please let me know if this will work for you and the email addresses for the individuals you would like to attend.

Thank you.

Jean,

Missouri Department of Natural Resources (DNR) is in the process of developing its State Implementation Plan (SIP) for the Second Implementation Period under the Regional Haze Rule, for Mingo and Hercules-Glades wilderness areas.

The states in the Central States Air Resources Agencies (CenSARA) organization, which includes Missouri, contracted with Ramboll US Corporation (Ramboll) to produce a study examining the impact of point sources of NOx and SO2 on each Class I area in the central region of the United States and nearby states. For each Class I area, the study took into account light extinction-weighted wind trajectory residence times, 2016 sulfur dioxide and nitrogen oxides facility emissions, and distance from sources of nitrogen oxides and sulfur dioxide to Class I Areas. The study produced an area of influence (AOI) for each Class I area, which shows the geographic areas with a high probability of contributing to anthropogenic visibility impairment.

Based on the results of the AOI study, DNR has identified the following source in your state that is reasonably anticipated to impact visibility conditions at Mingo wilderness areas.

Duke Energy Indiana LLC - Gibson Genera

We would like to discuss, with you, your state's plans for a reasonable progress analysis for the mentioned facilities in order to determine whether it would be feasible for the facilities to reduce their SO2 and/or NOx emissions to improve visibility at Missouri class I areas.

Please let us know if any of the below times would work with your schedule to hold a conference call, and we will send you an outlook invitation with instructions to connect to the call. All times are CST.

Wednesday 8/19- 1-2 pm

Friday 8/21- 10-11 am

Friday 8/21- 2-3 pm

Monday 8/24- 11am - 12 pm

Thanks,
Saeid

Folks, while the "% contribution" approach can be used to rank facilities for selection, if used to set a contribution threshold, it penalizes the most-impacted Class I areas by setting a threshold for selecting facilities based upon a percentage of the total impact at a given Class I area--the higher the total impact, the higher the selection threshold.

Hi Donna – if we have time, I have another agenda item for tomorrow's call. I'm wanting to use this modeling (well, the final version when it's ready but am looking at this version as a preview) to help identify the class I areas impacted by Ohio. The RH guidance indicates we can use the same areas identified in Round 1, which I'm doing, but need to consider whether the assumptions have changed. I was thinking I could use the LADCO modeling as support/validation. My question arises as to what metric would be considered to determine what "contributes" means. Looks like in Round 1 we used 2% or greater contribution to light extinction based on back trajectories and modeling. I don't see that we specified if that was 2% of U.S. anthropogenic or total. I'd like to hear how other states are approaching this.

Holly

EPA's reaction to the National Parks Conservation Association (NPCA) petition on their final guidance

Agenda:

1. Alisa Liu, EPA R5, has a few updates on EPA positions to pass along to us.

2. Hassan requested discussion on 2 items:

---EPA's reaction to the National Parks Conservation Association (NPCA) petition on their final guidance--Initial thoughts? What happens moving forward? Etc.

--- Methodology for identifying sources in other states that LADCO states would want to see a four factor analysis performed. I've been having a few conversations with other states as they contact us, and they're interested in whether or not we had identified specific facilities from other states that we were interested in and vice versa. Maybe this is part of the eventually "asks" to different states? Anyway, it might be worthwhile to start having these conversations earlier than later.

3. Tsengel has a new version of the source apportionment results spreadsheet, attached below. Please let her know if you have questions or corrections. It includes the following updates:

1. Corrected calculation for international contribution in the 'Summary Data-Most Impaired' tab.

2. Included 18 more Class I areas' analysis results by pulling model outputs at additional 17 IMPROVE sites (BALD1, BRCA1, BRIS1, GAMO1, GICL1, LOST1, LYEB1, NOAB1, PORE1, SAGA1, SAGU1, SHRO1, SIAN1, SYCA2, TRIN1, WHPE1, and ZICA1), which were missing in previous version.

3. The analysis based on following datasets:

a. ClassIareas_NEWIMPROVEALG_2000to2018_2020_may5_IMPAIRMENT.csv

b. The LADCO_2011en base run and LADCO_2028HAZE PSAT model outputs

c. Most recent natural and baseline visibility condition values from

Subject: [EXTERNAL] RH SIP Four-Factor Analysis Selected Sources for Second Implementation Plan Information

Hello David and Melanie,

I have attached part of the presentation IDEM gave to sources selected for four-factor analysis. The portion of the presentation included is specifically related to IDEM's source selection process and results. IDEM met with the company representatives of sources selected for four-factor analysis in advance of sending out the information requests to them.

We look forward to discussing IDEM's selected source process and results and answer any other questions you all may have related to the Regional Haze State Implementation Plan development steps that IDEM has completed so far and where we plan to go from here.

Regards,

Jean Boling

Oh yeah, sorry, I forgot you are an hour later than me. I'm in Minnesota, and most of the other NPS folks are in Denver area. That would be 3pm eastern, 2pm central, 1pm mountain. I will send an appointment.

For the call, we are mostly interested in hearing where IN is in the planning process for Regional Haze - particularly your methodology/results for selecting sources for the 4-factor analysis. If there's anything else you'd like to discuss or if you have materials to send out before the call, just let me know.

Thanks!

Hi David,

I apologize for not getting back to you sooner. Is that 3:00 p.m. for Indiana, EST? If so, we are all available at 3:00 p.m. Both Mark and Susan have a meeting at 1:00 p.m. (EST) that day.

Thanks.

It looks like Tuesday 6/16 at 2 Central/1 Mountain works for all our people. If that's good for you, go ahead and put it on your calendar and let me know. I'll get a conference call number and send out an appointment.

Thanks!

Hi Jean,

I hope this note finds you well! I heard your update on Regional Haze progress during the most recent LADCO call. My NPS colleagues and I would love to talk with you soon to learn about which sources Indiana has identified for Regional Haze 4-factor analysis and how those are progressing (if they are underway). Would you have time for an informal check-in phone call during the second or third week in June? As of now, we have good availability on Wednesday June 10th or Tuesday/Wednesday of the following week (6/16, 17). If those dates are not good for you (or if you aren't ready to talk) please let me know and we will adjust accordingly.

Thanks!
David

Greetings,

I wanted to reach out to you as part of the our Regional Haze Planning Period two interstate consultations. As part of this process, we have identified sources in your state that potentially impact visibility at Arkansas Class I areas. The attached PowerPoint presents an overview of our methodology. We would like to set up a call with you in the as part of our interstate consultation process to discuss our methodology, and which sources we identified. Please let me know what your availability is at your convenience.

Wishing you a happy new year!

Subject: Fw: [EXTERNAL] RE: cement kiln BART
Attachments: Cement kiln BART.xlsx

**** This is an EXTERNAL email. Exercise caution. DO NOT open attachments or click links from unknown senders or unexpected email. ****

Hi Jean,

I was very favorably impressed by your presentation today and would appreciate it if you would send me the spreadsheet on which your slide #6 was based so that i can update the list of facilities we sent to you about a year ago via LADCO.

As promised, i have attached the latest version of our "scorecard" that i am using to help us track this nationwide effort and to provide a resource to the states. For example, i know that AZ, CO, and MT have received 4-factor analyses from cement plants and that may be helpful to you. And, WA has experience with BART for an ALCOA primary aluminum smelter that you may want to tap into. As for EGUs, CO, MT, ND, and NM have posted 4-factor analyses that you can access on their websites. The scorecard is a work in progress--please let me know if you see something that needs corrected.

Another work in progress is the workbook i have attached that tries to pull together info on controlling emissions from cement kilns.

Because we are a national office, we receive info from all over the country and have been involved with the technical aspects of the regional Haze Rule since its promulgation. We would be happy to share our experiences with you. For example, we are seeing many 4-factor analyses that do not take advantage of EPA's Control Cost Manual, that do not use the current prime interest rate, and/or use an incorrect "remaining useful life" for control equipment.

I hope this helps--please feel free to contact me with any questions or comments.

Thanks Don, this will be very helpful.
Holly, I'm forwarding to you because Ohio was/is? the 4-factor lead for cement and lime kilns.

On Fri, Sep 27, 2019 at 10:38 AM Shepherd, Don <don_shepherd@nps.gov> wrote:

Hi Donna,

It is my understanding that LADCO has a group working on the cement source sector. We have been compiling information on BART determinations around the US and i am sharing it with you in the attachment. While i would like to have been able to pull this info together in a more coherent manner, i figured it was better to get this to you sooner rather than later.

I shall send you any updates as i can find the time to create them.

Please feel free to contact me if you have any questions.
