Hi Jean

In an effort to promote early consultation and to facilitate the expeditious development of your Regional Haze SIP I am providing the results of my preliminary analysis of sources within the State of Indiana which identifies those for which I feel a 4-factor analysis is warranted. Each of these sources has a Q/d of  $\geq 4$  (as determined by LADCO's Q/d spreadsheet V5.6) and together represent over 80% of the cumulative impact to the closest Forest Service Class I area – either Hercules Glades or Dolly Sods Wildernesses.

- Most of these sources have high SO2 emission rates. Many are well above the presumptive SO2 rates EPA set for BART in 2005 of 0.15 lb/MMBtu. One source has no SO2 controls at all.
- Clifty Creek, Gibson and IPL-Petersburg look like they may have very poorly performing SCR systems for NOx. The mean for all steam boilers with SCR in the EPA EGrid database is 0.11 lb/MMBtu and the median is 0.08 lb/MMBtu.

#### Other sources:

- Steel Mills and coke ovens – I know the state is looking into these sources
- SABIC Innovative Plastics Mt Vernon LLC – need more information

My analysis assumes the following permanent shutdowns by 2028. These facilities should have some sort of permit/SIP conditions to make these shutdowns enforceable.

NOTE: Highlighted shutdown years are beyond 2028, so 4-factor analyses are necessary for these.

I look forward to working with you to review the four factor analyses. Feel free to call me with any questions.
