

WIC Temperature, Cleaning and Control Log for Hemoglobin Testing Areas

Instructions: Note the date and time that temperature readings and cleaning occurred for each testing area each day the clinic site is open. Indicate days the clinic is closed.

Acceptable Temperature Ranges: The individually packaged microcuvettes are to be stored at room temperature (59-86° F). The HemoCue Hb 201+ analyzer can be stored at 32-122° F; operating temperature is 59-86° F. (Note action taken on the log when temperature readings are outside of the accepted range.)
