

March 15th, 2024

Quench proposes to install a bottle-less water cooler(s) for the State of Indiana. Quench will utilize an existing potable water source as determined by the State of Indiana and will run the required plumbing from the source to the location of the installed cooler. The installation will include shut-off valves at the source and at the point of use, as well as filtration that will be mounted within the body of the cooler. Installation will be per industry standards and care will be taken not to disrupt existing operations. Installation timing will be dependent on the completion of the rental agreements and subsequent scheduling by Quench.
