

Optum Benefits Analytic Manager®

A powerful reporting approach to summary analytical data

UMR offers clients access to Optum Benefits Analytic Manager (BAM), a secure, online decision support system for analytical reporting. The comprehensive analysis tool uses enrollment, paid medical claims, and pharmacy claims (if available) to translate health care data into actionable information.

The report data assists group health care plans in evaluating their cost drivers, benefit utilization, quality and performance trends, and the overall health of their member population to determine their impact on the plan.

Overview

BAM offers multiple analytical summary report templates in a dashboard environment with the ability to export data as a presentation style PDF or Microsoft PowerPoint file for further review and analysis.

BAM uses analytic methodology to help you understand your population's health status, based on paid claims activity.

Data can be filtered or summarized by the customer's UMR account structure.

Features and benefits include an interactive application with account specific data, customizable report templates, chronic condition and clinical reporting, catastrophic (high-cost) paid dollar thresholds at \$50K/\$100K, and cost comparisons against industry normative values with data updated monthly.

Summary report templates

- Plan performance activity with geographic and heat map tracking
- Admission activity
- Catastrophic (high-cost) activity
- Cost and utilization overview
- Dashboard – summary of plan activity overview
- Demographic activity
- Dental (if data is available)
- Distribution clinical conditions
- Drivers of change
- Evidence-based medicine key measures
- Outpatient activity
- Pharmacy activity (if data is available)
- Population health risk
- Preventive service snapshot
- Table and tile reports to provide an assessment of plan performance
