

Environmental Health & Safety

Medical First Aid

1 The Problem

At work locations where serious incidents can result in injuries such as bleeding, stoppage of breathing, cardiac arrest, etc., access to treatment should be within 3 to 4 minutes from the place of business. For many businesses, however, this is not possible due to their remote nature or location. Proximity and availability to first aid, AEDs and bloodborne pathogen solutions is key to helping prevent further harm to the victim or others responding to an incident. This can have a big impact on a company's:

- Compliance with safety standards
- Employee safety
- Incident rates
- Worker's compensation rates

2 Solutions that Work

Medical first aid programs provide information to help you properly apply first aid, build an exposure to bloodborne pathogens (BBP) plan and place/use eyewash stations. Established medical first aid programs can help save lives, reduce recovery time and be the difference between a temporary or lifelong disability for the victim.

- Rapid first aid response and AED help save lives
- Bloodborne pathogens plans help prevent exposure to HIV, hepatitis and other infections
- Eyewashes/showers help save employee eyesight and prevent chemical burns

3 How Grainger Can Help

Grainger has what you need to help you respond to the medical first aid needs of your employees and visitors.

Products

- First Aid Kits
- Eyewash Stations
- AED Machines
- Training Materials
- Cleaning Solutions
- Bloodborne Pathogen Kits
- Signage

Services

- First Aid Assessments
- Eyewash/Shower Survey & Assessment
- First Aid/CPR/AED/BBP Training
- Grainger Online SafetyManager Suite®

Expertise
