As our undeveloped greenspace continues to disappear, it is becoming more and more important to redevelop and reuse land that has already undergone development. The existence of buildings and infrastructure and access to transportation resources can actually lower the costs to a potential developer. Redevelopment of brownfield properties benefits entire communities by rejuvenating vacant properties, increasing the tax base and reducing blight. However, when the potential environmental liability at these properties is unknown, prospective purchasers are often unwilling to assume the risk of undetermined potential cleanup costs. Thus, the properties remain idle.

How can the Indiana Brownfields Program help?

Educational Assistance
The Indiana Brownfields Program (Program) participates in various conferences and workshops across the state to inform stakeholders of available resources to facilitate brownfield redevelopment. The Program is also available to conduct additional informal workshops and meetings upon request.

Financial Assistance
The Indiana Brownfields Program offers financial assistance for environmental site assessment, remediation, and demolition activities under certain circumstances to eligible public and private entities.

Environmental Technical Assistance
The Indiana Brownfields Program performs technical oversight and review for all projects receiving financial and/or legal assistance from the Program and/or U.S. EPA.

Liability and Legal Assistance
To address concerns of potential environmental liability, the Indiana Brownfields Program offers Comfort Letters and Site Status Letters. These letters are designed to clarify or limit the liability of site owners and prospective purchasers for past actions by previous owners, so as to encourage an entity to redevelop a brownfield property.

Indiana Brownfields Program

The Indiana Brownfields Program (Program) was created by 2005 legislation (Senate Enrolled Act 578) under the management of the Indiana Finance Authority (IFA), which combined existing state resources to better assist communities with brownfield redevelopment. The Program works in partnership with the U.S. Environmental Protection Agency (EPA) and other Indiana agencies to assist communities in making productive use of their brownfield properties.

The Indiana Brownfields Program works in partnership with the U.S. Environmental Protection Agency and other Indiana agencies to assist in the cleanup and reuse of brownfields by helping communities identify and mitigate environmental barriers that impede sustainable redevelopment and local economic growth.
