Open new window for Google Chrome and click on the little buttons on the top, far right

A menu will expand and you will want to go to the Settings option (I couldn't get a screen shot of the expanded menu). Once you select Settings, you will get the Settings menu to appear. The first option is related to Passwords

When you click on the action button, it will bring up a list of websites and you will want to select "Remove" next to the ClientTrack website

.
