

INDIANA DEPARTMENT OF TRANSPORTATION

Interstate Highways Congestion Policy 2026

APPENDICES

The appendices for this policy are posted online on the Department's website. Refer to the most recently updated version of the appendices at the following location:

<https://www.in.gov/indot/IHCP>

TABLE OF CONTENTS

Appendix A – Emergency and Urgent Repairs.....	2 Pages
Appendix B – Select Interstate Restrictions and Times	92 Pages
Appendix C – Policy Exceptions	3 Pages
Appendix D – Construction Contracts on High-Volume Interstate Routes.....	5 Pages
Appendix E – District Special Project Corridor Segments.....	1 Page
Appendix F – Interstate Operations Outside of Paved Areas	1 Page
Appendix G – Terms and Definitions	8 Pages
Appendix H – Additional Resources	1 Page

APPENDIX A – EMERGENCY AND URGENT REPAIRS

The Department shall have the ability to respond to incidents with unplanned operations when needed to make repairs to Department infrastructure in response to a failure, damage incurred due to an incident, or for other reasons. A Condition of Emergency Repair or a Condition of Urgent Repair may be declared to allow for the immediate restriction of shoulders, lanes and ramps. Such a declaration may be made at the discretion of the Commissioner, Deputy Commissioner, or the INDOT District Deputy Commissioner of the district in which the condition has occurred, or their designee. Per the policy, such a Condition of Emergency or Urgent Repair is exempt from the requirements of Appendices B, C and D.

Mobility impacts resulting from these restrictions shall be mitigated, when possible, by notifying other strategic parties involved with work zone safety and incident management.

Shortness of time or potential impending delays to a schedule due to a lack of planning do not constitute an emergency or urgent situation within the context of this appendix and its application.

EMERGENCY REPAIRS

A Condition of Emergency Repair may be declared for repairs requiring lane, shoulder or ramp restrictions that must occur immediately without delay. Such conditions may include, but are not limited to:

- Pavement failure
- Bridge deck failure
- Roadway damage due to an incident
- Bridge structure impact damage
- Damaged roadside appurtenances
- Slope instability or failure

Restrictions for Emergency Repairs may be implemented simultaneously with proper notifications being made as outlined herein. When practical, mitigation strategies should be in place prior to restrictions being implemented.

URGENT REPAIRS

A Condition of Urgent Repair may be declared for repairs requiring lane, shoulder or ramp restrictions that must be initiated within 24 hours of the determination or over a weekend when it is not possible to comply with the requirements of Appendices B, C and D. Such conditions may include, but are not limited to:

- Replacement of worn temporary pavement markings
- Correction of a drainage or slope issue in a temporary crossover
- Filling potholes

- Other repairs that will close or restrict a lane or lanes that are otherwise required to remain open and unrestricted to traffic under this policy

The District shall assess the needed restrictions necessary to perform the Urgent Repairs to select the best time for the restrictions to occur.

A limited analysis may be conducted by the District before proceeding with Urgent Repairs if the restrictions will occur outside of either the Select Interstate Restrictions and Times in Appendix B or the restrictions and times allowed by an approved Policy Exception related to the location of the planned Urgent Repairs. Ideally, the restrictions should be implemented during the lowest traffic volume period possible.

If queuing is anticipated, some type of queue mitigation strategy should be included with the implementation of the restrictions for an Urgent Repair. If available, options may include the use of, but are not limited to, a queue detection and warning system, queue trucks, or law enforcement protecting the back-of-queue.

Restrictions for Urgent Repairs shall not be implemented until all proper notifications have been made as outlined herein. Any mitigation strategies identified as necessary via this process shall be in place prior to restrictions being implemented.

During Urgent Repair operations, if a queue develops and if it is possible and safe to do so, the restriction shall be removed, and the work stopped, to allow the queue to dissipate.

NOTIFICATION REQUIREMENTS

Once a District Deputy Commissioner declares a Condition of Emergency or Urgent Repair, the District shall notify the following parties about the necessary restrictions. This notification should occur as soon as the repair schedule is determined and, whenever possible, prior to the work occurring.

1. Traffic Management Center (TMC) Dispatch
2. District Public Information Office (DPIO)
3. The appropriate Indiana State Police (ISP) Post
4. Local emergency services, if applicable

The District shall also enter the restrictions into the Condition Acquisition Reporting System (CARS). The TMC can assist with this, if necessary. The information entered into CARS shall be in accordance with the CARS & TMC Reporting Policy.

Immediately prior to the restrictions being implemented and during their implementation, notifications shall be made in accordance with the Department's CARS & TMC Reporting Policy.

The TMC can be contacted by phone at 317-899-8690, ext. 1, and by email at indytmc@indot.IN.gov. Contact information for the District Media Contacts can be found at www.media.indot.in.gov. The Indiana State Police can be notified via email at indpc@isp.IN.gov or by phone at the TMC, 317-899-8690, ext. 1.

APPENDIX B - SELECT INTERSTATE RESTRICTIONS AND TIMES

Appendix B provides Select Interstate Restrictions and Times that have been identified to minimize traffic impacts on the interstate and allow for their safe implementation. All planned restrictions shall be reviewed by the District Traffic Office in which the planned restrictions will occur. Concurrence by the appropriate District Traffic Office will indicate that the planned restrictions are deemed compliant with the requirements of Appendix B and therefore compliant with this policy.

If the Select Interstate Restrictions and Times provided in Appendix B do not offer sufficient opportunity to accomplish the work, a Policy Exception may be requested in accordance with Appendix C.

The requirements of Appendix D shall apply via a Policy Exception in accordance with Appendix C for any restriction meeting **all** the following criteria:

- The work is associated with an INDOT Construction Contract
- The restriction will be on a High-Volume Interstate Segment
- At least two open lanes will not be provided for a series of 24-hour closures totaling a duration of longer than 14 days

CONDITIONS AND REQUIREMENTS FOR DISTRICT CONCURRENCE

All restrictions, including those within the Select Interstate Restrictions and Times, must be reported with an IHCP Restriction Notification form submitted to the INDOT District Traffic Engineer's Office of the district in which the restriction occurs. This is to ensure agency awareness and to provide the Department the opportunity to give feedback and guidance.

All restrictions, including those within the Select Interstate Restrictions and Times, must satisfy all the notification and reporting requirements of the policy. The Select Interstate Restrictions and Times do not supersede Department policies or contract documents concerning work on designated holidays.

Implementing restrictions in the field in accordance with these Select Interstate Restrictions and Times does not excuse, absolve, or obviate the need for queue mitigation if queues form because of work zone-related restrictions. In the event that queues form, the Responsible Site Supervisor shall have the immediate responsibility to either 1) implement protection of the back-of-queue with in-place and operational queue mitigation, or 2) where roadway conditions would allow for the safe removal of temporary traffic control, to immediately remove the restriction from the roadway to stop the formation or growth of a queue and to dissipate any formed queue.

For concurrence based on the Appendix B Select Interstate Restrictions and Times, the following conditions shall also be met:

- For restrictions involving INDOT Construction Contracts and where continuous restriction durations will be longer than 14 days, adherence to Appendix D for High-Volume Interstate Route segments, if applicable.

- All open lanes must have a minimum lane width of 11 feet.
- Except where allowed to be 1 foot by the Indiana Design Manual (IDM) or by an approved Design Exception in accordance with the IDM, a minimum of 2 feet of paved surface must be provided on either side of the open lanes to provide shy distance between the lane of traffic and any drop off, traffic barrier, traffic control device or other obstruction.
- A restriction may not occur within an interstate highway segment that is designated as a detour or alternate route for another interstate highway restriction that is already in place or has already been approved. Where this is unavoidable, a Policy Exception will be required.

SELECT RESTRICTIONS AND TIMES

The following types of restrictions shall be valid only if all above conditions and requirements have been met and with the concurrence of the District Traffic Office.

1. Interstate operations outside of paved areas that will have encroachments onto or across an open interstate lane or ramp:
 - a. Table B-1 provides Select Interstate Restrictions and Times.
 - b. See Appendix F for additional requirements for such operations.
2. Shoulder width reductions that maintain sufficient room for vehicles to take refuge without encroaching into a lane of traffic:
 - a. These restrictions may occur at any time.
 - b. Shoulders must provide a useable width of at least 8 feet and shall provide a minimum of 2 feet of paved surface.
3. Shoulder closures where the ability for a vehicle to take refuge without encroaching into a lane of traffic due to a useable shoulder width of less than 8 feet being provided:
 - a. Table B-1 contains Select Interstate Restrictions and Times for shoulder closures.
 - b. Except where allowed to be 1 foot by the Indiana Design Manual (IDM) or by an approved Design Exception in accordance with the IDM, a minimum of 2 feet of paved surface must be provided.
 - c. System interchange ramps with more than one lane shall be assessed under the mainline segment of interstate from which they originate.
 - d. Non-system interchange ramp shoulder closures may occur at any time.

4. Lane width reductions that provide the above-stated required minimum widths and do not reduce the number of lanes:
 - a. These restrictions may occur at any time.
 - b. Note that implementing lane width reductions will likely require the use of and phasing of other restrictions, such as short-term lane closures, to implement temporary traffic control elements such as pavement markings and delineation devices for the lane width reduction. Such restrictions are also subject to the policy regardless of their duration and must also be planned carefully to comply with this policy.
5. Lane closures:
 - a. Table B-1 contains Select Interstate Restrictions and Times for lane closures.
 - b. System interchange ramps with more than one lane shall be assessed under the mainline segment of the interstate from which they originate but shall always have at least one open lane.
6. The full closure of any interstate non-system interchange exit or entrance ramp:
 - a. These restrictions may occur at any time.
 - b. However, care should be taken to avoid multiple adjacent, consecutive and concurrent ramp closures that would eliminate access to an area. Ideally, when one ramp is closed, an adjacent ramp will be available for use.
7. Traffic breaks that meet all the following conditions:
 - a. The traffic volume shown on Table B-1 for the interstate segment and hour of the operation and the hour following the operation is 800 PCE/hour or less.
 - b. The maximum duration of interruption to traffic is 20 minutes per traffic break. Note that the actual available work time with full access across the roadway will be less than 20 minutes.
 - c. After a traffic break and before another traffic break may be performed, all restrictions shall be removed from the roadway for minimum of at least 20 minutes or until all queued traffic has dissipated, whichever is longer.

NOTES APPLICABLE TO THE TABLES

Tables B-1 are set up by interstate route, then by day of the week, then by direction.

Tables labeled as Weekdays include and apply to Mondays, Tuesdays, Wednesdays and Thursdays. Separate tables are provided for Fridays, Saturdays and Sundays.

Interstate segments are by row and can be identified by the provided beginning and ending mile markers (MM) and crossing roads.

The colored cells indicate the calculated hourly traffic volumes in Passenger Car Equivalents (PCEs) used for the determination of acceptable restrictions.

APPENDIX C – POLICY EXCEPTIONS

When work (1) is not exempted by the policy, (2) is not declared to be a Condition of Emergency Repair or a Condition of Urgent Repair as described in Appendix A, and (3) cannot be accomplished within the Select Interstate Restrictions and Times as provided in Appendix B, a Policy Exception may be sought.

Approval of the Policy Exception request is required prior to proceeding with any work or the implementation of a roadway restriction. Additionally, once a Policy Exception request has been approved, work may not commence nor may a restriction be implemented until all necessary notifications have been made in accordance with the Department's Condition Acquisition and Reporting System and TMC Reporting Policy (referred to as the CARS Policy). The Responsible Site Supervisor shall ensure that queue mitigation measures, especially any required measures as a part of an approved Policy Exception, are available and ready for immediate implementation should there be a need for them, prior to commencing the implementation of a restriction.

Approval of a Policy Exception does not imply approval of any needed Maintenance of Traffic Level One Design Exception in accordance with the Indiana Design Manual.

ADDITIONAL REQUIREMENTS

Additional requirements may need to be considered based on the interstate segment where the restriction will occur. The Requestor shall confirm with the District Traffic office whether additional requirements apply to the Policy Exception request.

1. INDOT CONSTRUCTION CONTRACTS ON HIGH-VOLUME INTERSTATE ROUTE SEGMENTS

High-Volume Interstate Segments have been identified in Table B-1 of Appendix B. The High-Volume Interstate Segment column indicates whether a segment has been determined to be a High-Volume Interstate Segment.

The requirements of Appendix D shall apply via a Policy Exception in accordance with this appendix for any restriction meeting **all** the following criteria:

- The work is associated with an INDOT Construction Contract
- The restriction will be on a High-Volume Interstate Segment
- At least two open lanes will not be provided for a series of 24-hour closures totaling a duration of longer than 14 days

2. RESTRICTIONS IN DISTRICT SPECIAL PROJECT CORRIDOR SEGMENTS

Appendix E outlines additional requirements when a Policy Exception is being sought within segments identified as Special Project Corridors by the Districts. Restrictions located within segments identified as District Special Project Corridors must comply with the requirements of Appendix E.

POLICY EXCEPTION REQUEST PREPARATION

The Requestor shall complete a quantitative analysis of the impact on the motoring public of any proposed closure or restriction. They will also describe methods to inform and protect traffic such as those used in the Transportation Management Plan (TMP). If queuing is expected, steps should be taken to mitigate for the presence of queue by warning traffic of the queue and protecting the end of the queue.

Policy Exception requests may cover multiple aspects of the work. For instance, a single request may analyze lane closures, shoulder closures, and ramp closures for a specific project. Special attention should be given to additional short-term needs for the initial traffic maintenance setup and during traffic maintenance phase changes. Including all the closures needed for the various types of work and phasing planned for the entire duration of a project into a single request will decrease the amount of paperwork required and the number of Policy Exceptions that will need to be prepared, reviewed and approved.

COMPONENTS OF A POLICY EXCEPTION REQUEST

1. IHCP Restriction Notification Form

This form summarizes the key information of all planned restrictions, including those for which the Policy Exception request is being sought. This form will be used by the Department to document all applicable Concurrences and Approvals.

2. For INDOT Contract Work, any required Recurring Special Provisions, such as 801-T-216 LANE CLOSURES, shall be completed and included with the form.

3. Explanation of Analyses and Justification of Work Hours Selected

The Policy Exception request should provide detailed information about the nature of the restriction, the work, the analysis that was used to evaluate the impact on traffic and, if needed, any mitigation measures that are to be implemented to address adverse effects on safety and mobility.

4. Traffic Modeling and Queue Analysis

Procedural details for obtaining traffic data, adjusting it, and performing an analysis may be found in the Queue Analysis Guidelines.

5. Other Supporting Information

Policy Exception requests should include relevant supporting information, including but not limited to:

- Relevant excerpts of the Transportation Management Plan (TMP)
 - Temporary Traffic Control Plans (TTCP)

- Transportation Operations Plans (TOP)
- Public Information Plans (PIP)
- Relevant correspondence

SUBMITTING A POLICY EXCEPTION REQUEST

Requestors shall submit all Policy Exception requests via email to the appropriate Reviewer in the District Traffic Office of the District in which the project is located.

APPENDIX D – CONSTRUCTION CONTRACTS ON HIGH-VOLUME INTERSTATE ROUTES

This appendix outlines additional requirements for interstate segments identified as High-Volume when a Policy Exception is being sought per Appendix C. This appendix applies to any restriction meeting **all** the following criteria:

- The work is associated with an INDOT Construction Contract
- The restriction will be on a High-Volume Interstate Segment
- A least 2 open lanes will not be provided for a series of 24-hour closures totaling a duration of longer than 14 days

The requirements of this appendix shall apply via a Policy Exception in accordance with Appendix C. Additional requirements of Appendix E may also apply.

High-Volume Interstate Segments have been identified in Table B-1 of Appendix B. The High-Volume Interstate Segment column indicates whether a segment has been determined to be a High-Volume Interstate Segment. Background information on this determination is provided at the end of this appendix.

ADDITIONAL REQUIREMENTS FOR POLICY EXCEPTIONS ON HIGH-VOLUME INTERSTATE SEGMENTS

A. Alternatives Analysis for Maintenance of Traffic (MOT)

An MOT alternatives analysis is required and should include the following:

1. A queue analysis for each alternative. Procedural details for obtaining traffic data, adjusting it, and performing an analysis may be found in the [Queue Analysis Guidelines](#).
2. Construction cost estimates for at least the following three scenarios. For each scenario, include separate cost estimates for providing the preferred roadway cross section as well as Options 2 and 3 in the cross-section elements hierarchy of Ch 503 “Maintenance of Traffic” of the Indiana Design Manual.
 - A fully compliant alternative providing two lanes of traffic in each direction, such as, but not limited to, temporary widening, a 3-and-1 contraflow crossover, or a runaround with temporary structure.
 - A partially compliant alternative that during peak hours provides two lanes of traffic either for the prevailing direction (if applicable), such as movable barrier (zipper wall), or for both directions via short term lane restrictions with construction drums, such as nighttime lane restrictions. Such an alternative would likely require a Policy Exception.
 - A non-compliant alternative that would offer a lower cost or require a shorter duration. Such an alternative would typically be at the expense of mobility and would likely require a Policy Exception.

3. Work zone road user costs for each alternative that accounts for impacts to the motoring public and the community at large as a result of the work zone activity. Guidance on user costs may be found in Chapter 311/50 “Economic Analysis” and Chapter 503 “Maintenance of Traffic” of the Indiana Design Manual. User costs should, at a minimum, include:
 - Travel delay costs from detours due to closures or from delay due to congestion associated with restrictions
 - Vehicle operating costs
 - Crash costs
4. A review of historical safety and mobility performance during similar construction activities on the corridor and documentation of the findings.
5. The recommendation of a preferred alternative.

B. Cross Section Elements

The cross section for each MOT alternative should be determined in accordance with the requirements of Ch 503 “Maintenance of Traffic” of the Indiana Design Manual.

ADDITIONAL PROCEDURES FOR POLICY EXCEPTIONS ON HIGH-VOLUME INTERSTATE SEGMENTS

A. Alternatives Analysis for MOT

1. For Projects in Scoping Phase

For projects within High-Volume Interstate Segments, an MOT alternatives analysis should be included as part of the Engineer’s Report. The budget and construction schedule should account for any shoulder strengthening or temporary widening and adjustments to infrastructure needed to maintain two lanes in each direction through the work zone. Any Policy Exception requests should be approved prior to beginning the design phase.

2. For Projects in Design Phase

For projects within High-Volume Interstate Segments currently in design that do not provide at least two lanes in each direction, an MOT alternatives analysis should be completed. The analysis and the recommended MOT scheme should be coordinated with the appropriate DTE, who will submit it to the Work Zone Council for a determination. The Engineer’s Report should be amended with the analysis and approved alternative.

B. Policy Exceptions Involving High-Volume Interstate Segments

Policy Exception requests to maintain fewer than two lanes will be considered. Requests should be submitted as early as possible, ideally during planning/scoping or early in the design phase (Stage 1). The full evaluation of MOT alternatives and their associated costs should include an option that completely adheres to the policy. Reasonable, cost-effective alternatives that provide necessary mitigating measures to provide safer traffic flow will be considered. Alternatives should be presented in a fashion that allows for a reasonable correlation and comparison to be made among them.

Policy Exception requests should be coordinated with the appropriate DTE, who will submit with supporting justification to the Work Zone Council. Approval is at the discretion of the Work Zone Council with the final approval issued as an approved Policy Exception.

1. Shoulder Strengthening and Temporary Widening

Shoulder strengthening or temporary widening that requires geotechnical work may warrant special consideration. Short-term, one-lane cross sections to complete shoulder strengthening or temporary widening will be considered. The remaining phases of TTCP will require the two-lane cross section. Approval of this Policy Exception will be at the discretion of the Work Zone Council and the IHCP Approving Authority (the Approver).

2. Duration of Restrictions, Phases, and the Policy Exception

The longer the duration of restrictions, phases and the Policy Exception overall, the stronger the justification that is needed to accompany the request. Repeated short-term restrictions should not be utilized when a longer restriction is more appropriate to complete the work.

Ensure the duration of the restrictions, phases and the Policy Exception is included in the request. The Policy Exception request should be submitted to the District Traffic Engineer (DTE) who will then forward the request to the Approving Authority. Consideration and justification for duration ranges are as described in Table D-1.

3. Queue Mitigation

Appropriate queue mitigation strategies for the proposed MOT alternatives must be included, regardless of the duration.

Duration	Description	Policy Exception Submittal Requirements	Determination Made By
15 - 30 days	A series of 24-hour closures totaling a duration of 15 to 30 days. (Greater justification needed.)	Justification statement for why the restriction is reasonable and prudent. An MOT alternatives analysis that includes queue and cost analyses (construction and user).	Work Zone Council
> 30 days	A series of 24-hour closures totaling a duration of greater than 30 days. (This duration is discouraged and will be considered only with a comprehensive alternatives analysis and a compelling and defensible justification statement.)	All requirements for duration of 15 - 30 days. A full description of the unique circumstances warranting a longer duration.	Work Zone Council

Table D-1 – Exception Requirements by Duration of Restriction or Phase.

BACKGROUND INFORMATION ON THE HIGH-VOLUME DETERMINATION

This section provides background information on how the identification of High-Volume Interstate Segments was determined.

The Department has found that two lanes must be maintained at all times during major construction operations for certain high-density Interstate segments to prevent extensive queuing and the resulting undesirable exposure to safety risk that results when only one lane is maintained. In these areas, the likelihood of extensive queuing persists throughout the day as well as increased chances of severe crashes. It is necessary, therefore, to evaluate at a high level the relative considerations of overall truck traffic as well as cross sectional elements of the traffic space of a work zone.

For Interstate highway construction operations where truck volumes exceed 10,000 trucks per day or total volume exceeds 30,000 vehicles per day, densities are elevated and safety risk due to exposure increases. An examination of conditions on highways such as I-65 and I-70 reveals that each time that the threshold is neared or passed, queuing and safety exposure escalates.

Additionally, where peak hour volumes are 7% of the total daily volume or higher, and either the daily vehicular volume or the truck volume approaches the thresholds of 30,000 and 10,000,

respectively, densities can approach levels that produce significant queuing. In these situations, two lanes per direction must be maintained even if volumes are below 30,000 and 10,000 vehicles per day. Situations may present where hourly volumes exceed 6% of 30,000 vehicles per day for one or two hours per day but the overall daily volumes are generally much lower than the 30,000 vehicles per day.

Segments with peak hour percentages and traffic volume characteristics shown in Table D-2 are considered to be High-Volume Interstate Segments.

Peak Hour Volume Percentage	Daily Vehicular Volume	Daily Truck Volume
Any	≥ 30,000	≥ 10,000
7%	≥ 26,000	≥ 8,000
8%	≥ 23,000	≥ 7,000
9%	≥ 20,500	≥ 6,500
≥ 10%	≥ 18,500	≥ 6,000

Table D-2. Minimum Thresholds Requiring Two Lanes.

Segment determinations have been summarized in the High-Volume Interstate Segment column found in Table B-1 in Appendix B.

APPENDIX E – DISTRICT SPECIAL PROJECT CORRIDOR SEGMENTS

This appendix outlines additional requirements when a Policy Exception is being sought per Appendix C for interstate segments located within corridors identified as Special Project Corridors by the Districts. If a restriction will be located within a High-Volume Interstate Segment, additional requirements of Appendix D will also apply.

CRAWFORDSVILLE DISTRICT

(This space reserved for future use.)

FORT WAYNE DISTRICT

(This space reserved for future use.)

GREENFIELD DISTRICT

(This space reserved for future use.)

LAPORTE DISTRICT

(This space reserved for future use.)

SEYMOUR DISTRICT

(This space reserved for future use.)

VINCENNES DISTRICT

(This space reserved for future use.)

APPENDIX F – INTERSTATE OPERATIONS OUTSIDE OF PAVED AREAS

This policy applies to other interstate operations occurring outside of paved areas, including, but not limited to, trash removal, ditch work, clearing right of way, mowing operations, and other work operations occurring off the roadway and shoulder.

- The following operations are subject to Appendix B:
 - All operations outside of paved areas, including mowing and herbicide, that encroach onto the roadway
 - All operations outside of paved areas, including mowing and herbicide, that encroach onto the shoulder
 - All operations outside of paved areas, including mowing and herbicide, that cross an open interstate lane
 - All operations outside of paved areas, including mowing and herbicide, that cross an open interstate ramp
- The following rural mowing operations may occur at any time:
 - Rural mowing operations that do not encroach onto the roadway
 - Rural mowing operations that do not encroach onto the shoulder
 - Rural mowing operations that do not cross an open interstate lane
 - Rural mowing operations that do not cross an open interstate ramp
- The following urban mowing operations may occur at any time except weekdays between 4 p.m. and 6 p.m.:
 - Urban mowing operations that do not encroach onto the roadway
 - Urban mowing operations that do not encroach onto the shoulder
 - Urban mowing operations that do not cross an open interstate lane
 - Urban mowing operations that do not cross an open interstate ramp

APPENDIX G – TERMS AND DEFINITIONS

The following definitions are provided for use within the context of this policy.

CONTENTS

Restrictions
Work Zone Concepts
Roadway Concepts
Traffic Concepts
Policy Concepts

RESTRICTIONS

1. **Restriction.** A restriction is the broadest term for any type of temporary traffic control operation that either closes or reduces in width a lane, lanes, shoulder or shoulders. Restrictions typically reduce the capacity of a roadway and often lead to increased congestion and possibly queuing.
2. **Closure.**
 - a. **Full Closure.** A type of restriction that fully closes an interstate by closing all lanes in both directions for more than 20 minutes. A full closure of an interstate requires Federal Highway Administration (FHWA) approval. For full closures that last 20 minutes or less, see Traffic Breaks.
 - b. **Full Directional Closure.** A type of restriction that closes all lanes in only one direction of an interstate for more than 20 minutes. The opposing direction will have lanes open to traffic. A full directional closure of an interstate requires FHWA approval. For full closures that last 20 minutes or less, see Traffic Breaks.
 - c. **Lane Closure.** A type of restriction that reduces the number of lanes by fully closing one or more lanes.
 - d. **Ramp Closure.** A type of restriction that fully closes an interstate ramp to all traffic. When one or more lanes on a ramp are available to traffic, the ramp is not considered closed (see Lane Closure). The full closure of an interstate system interchange ramp requires FHWA concurrence.
 - e. **Shoulder Closure.** A type of restriction that either fully closes a shoulder or reduces it to a width that does not offer a vehicle sufficient room for refuge. Closing a shoulder will cause a greater capacity reduction than a shoulder width reduction. Closing both shoulders will have a greater capacity reduction than closing a single shoulder. A shoulder should be considered closed if the usable shoulder width is less than 8 feet.

1. **Traffic Break.** A category of restrictions that provides short-term closures that affect all lanes of traffic in one or both directions of a highway for up to 20 minutes at time. Types of traffic breaks include Rolling Slowdowns (RSD), Temporary Stoppages (TS), and other strategies.
 - a. **Rolling Slowdown (RSD).** A type of traffic break restriction that is a short-term form of a full direction closure that affects all lanes of traffic in one direction of a highway for up to 20 minutes at time. Using Chase Vehicles and Pilot Vehicles, a break in traffic is created to allow work to occur. The time available for work will be less than the 20 minutes allotted for the restriction to traffic. It is distinguished from a temporary stoppage by traffic being kept moving or rolling at speed of no more than 20 mph.
 - b. **Temporary Stoppage (TS).**
A type of traffic break restriction that is a short-term form of a full direction closure that affects all lanes of traffic in one direction of a highway for up to 20 minutes at time. Using Chase Vehicles and Pilot Vehicles, a break in traffic is created to allow work to occur. The time available for work will be less than the 20 minutes allotted for the restriction to traffic. It is distinguished from a rolling slowdown by traffic being brought to a full stop.
2. **Width Reduction.**
 - a. **Shoulder Width Reduction.** A type of restriction where the available width of an existing shoulder is reduced. Unlike a shoulder closure, a shoulder width reduction will still allow a vehicle to take refuge, possibly using an unpaved shoulder. This may occur where lanes of traffic are shifted onto a paved shoulder, reducing the width of the paved shoulder. A shoulder width reduction will cause less capacity reduction than a shoulder closure.
 - b. **Lane Width Reduction.** A type of restriction where the available width of an existing lane is reduced. A lane width reduction will cause less capacity reduction than a lane closure. The minimum allowable lane width on an interstate in a work zone shall be 11 feet unless there is a Design Exception in accordance with the Indiana Design Manual.

WORK ZONE CONCEPTS

1. **Buffer Space.**
 - a. **Lateral Buffer Space.** Lateral buffer space provides protection for traffic and workers. The buffer space is a lateral area that separates road user flow from the workspace and might provide some recovery space for an errant vehicle. The lateral buffer space may be used to separate the traffic space from the workspace or such areas as excavations or pavement edge drop-offs. A lateral buffer space also may be used between two travel lanes, especially those carrying opposing flows.

- b. **Longitudinal Buffer Space.** Longitudinal buffer space provides an errant vehicle space to recover. They are typically found directly after a transition area, such as a lane merge or lane shift. Longitudinal buffer spaces should be based on stopping sight distance to allow a vehicle to come to a stop within this space. Stopping sight distance in turn is based on speed. On all interstates, longitudinal buffer spaces shall be based on a speed of 70 mph.
- 2. **Lateral Shy Distance.** Lateral shy distance is an empty space provided between the edge of an outside travel lane and an adjacent workspace separated by a barrier or drums. Lateral shy distances should be a paved surface. In general, the minimum lateral shy distance width shall be 2 feet. Under certain circumstances, such as across an existing bridge structure where available space is limited, a 1-foot minimum lateral shy distance width may be allowed in accordance with the Indiana Design Manual.
- 3. **MOT for MOT.** Short-term temporary traffic control (TTC) and restrictions needed to install longer term TTC, such as the initial setup of a TTC Plan or when switching from one phase to another. Typically, this work is not addressed by TTC plan and often left to the contractor to determine. This work can be quite complex even though it is short term, often taking place over only a night or two.
- 4. **Transportation Management Plan.** A Transportation Management Plan (TMP) is an overall strategy to accommodate traffic during road work and restrictions that minimizes adverse impacts and maximizes safety and mobility. The TMP should minimize the exposure to potential hazards for both motorists and highway workers in the work zone vicinity. The TMP should also minimize the vehicular delay in the work zone vicinity. A TMP consists of 3 components: a Temporary Traffic Control Plan, a Transportation Operations Plan (TOP), and a Public Information Plan (PIP). Although the TOP and PIP components are optional for projects that are not determined to be significant, on interstates they may nonetheless be required as a part of this policy to mitigate safety and mobility impacts caused by the restrictions. For more guidance on TMPs, see the Indiana Design Manual.
 - a. **Temporary Traffic Control Plan.** The Temporary Traffic Control Plan (TTCP or TTC Plan) is a required component of every TMP. It is often referred to as a Maintenance of Traffic Plan (MOT Plan). It may involve provisions and specifications in addition to plans. Having a good TTCP is crucial to understanding the impacts that work zone restrictions will have on an interstate. (See Transportation Management Plan.)
 - b. **Public Information Plan.** The Public Information Plan (PIP) is intended to create an organized and systematic process to communicate work zone restriction information to the traveling public and prospective stakeholders. The PIP will include information to be communicated, communication strategies, and methods of delivery potentially including, but not limited to, newspapers, TV, and radio media; TrafficWise; DMS and PCMS ITS messaging; temporary motorist information signs; web-based motorist information campaigns or project websites; email listservs; social media; and freight informational campaigns. (See Transportation Management Plan.)

- c. **Transportation Operations Plan.** The Transportation Operations Plan (TOP) is the set of strategies that will be used to minimize adverse impacts in the work zone. The TOP includes strategies for the operations and management of the work zone and all facilities affected by the work zone, which can include transit, rail, air, and pedestrians. The proposed mitigation measures should also be included in the TOP. These strategies may include traffic incident management plans, Intelligent Traffic System (ITS) components, maintenance or enhancement of other modes of transportation, emergency service provider access and communication, work zone law enforcement, and other related strategies. ITS strategies include Automated Work Zone Information Systems (AWIS), such as Queue Detection and Warning Systems. For the purposes of the policy, the TOP will often contain queue mitigation strategies. (See Transportation Management Plan.)
6. **Work Duration.** Work Duration is the length of time a work operation occupies a spot location. It is a key concept of work zone safety and mobility. It is a major factor in the selection of an appropriate work zone strategy and in the determination of required temporary traffic control. For the purposes of the policy, it also has direct impact on the length of needed interstate restrictions. There are five categories of work duration:
- a. **Long-Term Stationary.** Work or restriction that occupies a location for more than three days.
 - b. **Intermediate-Term Stationary.** Work or restriction that occupies a location for more than one daylight period up to three days, or nighttime work lasting more than one hour.
 - c. **Short-Term Stationary.** Daytime work or restriction that occupies a location for more than one hour up to one daylight period.
 - d. **Short Duration.** Work or restriction that occupies a location for up to one hour.
 - e. **Mobile Work.** Work or restriction that moves intermittently or continuously.

ROADWAY CONCEPTS

- 1. **Auxiliary Lane.** An auxiliary lane is the portion of the roadway adjoining the mainline lanes for speed change, turning, weaving, truck climbing, maneuvering of entering and leaving traffic, and other purposes supplementary to through-traffic movement. Auxiliary lanes are used to balance the traffic load and maintain a more uniform level of service on a highway. They facilitate the positioning of drivers at exits and the merging of drivers at entrances.

2. **Freeway.** Freeways are a type of highway facility characterized by the following features: (a) a divided, multilane highway, (b) full control of access to ensure that vehicles can only enter or exit the facility at specific, controlled points, (c) grade separation of crossing routes to ensure traffic flow is not interrupted, and (d) high design speeds. Freeways are designed to allow for faster travel and efficient movement of vehicles with a high level of driver comfort and safety.
3. **Interchange.** A grade-separated freeway junction where the intersecting roadways are connected via a network of ramps. Intersecting roadways are placed at different elevations using bridges or tunnels. Ramps allow traffic to move from one roadway to another and permit drivers to enter or exit the access-controlled highway without disrupting the flow of traffic.
 - a. **Service interchange.** Connects a freeway to a non-freeway roadway
 - b. **System interchange.** Connects two or more freeways
4. **Interstate Segment.** For the purposes of the policy, an Interstate Segment is a portion of a route's mainline lanes and paved shoulders between two adjacent interchanges and may include auxiliary lanes.
5. **Intersecting Roadway.** The pavement inside an interchange area that is not part of an interstate mainline or ramp. This includes all the pavement that is a part of a ramp touchdown intersection, including turn lanes, and the lanes between ramp touchdown intersections.
6. **Interstate.** An Interstate highway is a type of freeway. The Interstate System is a part of the National Highway System and a part of the Federal-aid system.
7. **Lane Width.** The width of a travel lane as measured from the center of the pavement marking at the left edge of the lane to then center of the pavement marking at the right edge of the lane.
8. **Mainline Lanes.** Mainline lanes of an interstate are the primary travel lanes focused on through-traffic movement.
9. **Ramp.** A roadway feature that connects different freeway routes at interchanges. For interstates, this includes any entrance and exit lanes, connecting lanes between routes at a system interchange, and collector/distributor lanes.
 - a. **Entrance Ramp.** A type of ramp that provides access to a freeway from a non-interstate. (See Ramp.)
 - b. **Exit Ramp.** A type of ramp that provides access to a non-freeway from a freeway. (See Ramp.)
 - c. **System Interchange Ramp.** A type of ramp that connects a freeway to another freeway. Full closure of an interstate system interchange ramp requires FHWA concurrence. (See Ramp.)

10. **Rural Segment.** Rural areas encompass all population, housing, and territory not included within an urban area. For the purposes of this policy, the classification of interstate segments as rural or urban shall be as reported by the Department's Traffic Count Database System (TCDS).
11. **Urban Segment.** Urban areas represent densely developed territory, and encompass residential, commercial, and other non-residential land uses. For the purposes of this policy, the classification of interstate segments as rural or urban shall be as reported by the Department's Traffic Count Database System (TCDS).

TRAFFIC CONCEPTS

1. **Back of Queue.** The back of queue is the location of the interface between higher speed traffic upstream of slower, congested traffic in a queue. This area is a dangerous space for distracted or impaired motorists and is where some of the most severe crashes occur. Queue mitigation strategies employed in conjunction with restrictions aim to minimize the danger associated with the back of queue by getting motorist attention and slowing them down as they approach slower traffic. ([See Queue Mitigation.](#))
2. **Capacity.** The maximum number of vehicles which can reasonably be expected to traverse a point or uniform section of a road during a given period under prevailing roadway, traffic, and control conditions. The presence of work, incidents and other roadside distractions tend to cause a reduction in capacity. Lane and shoulder restrictions also cause a reduction in capacity.
3. **Congestion.** A roadway condition when the traffic volume exceeds the capacity of a roadway leading to a loss of mobility for motorists and increased delays.
4. **High-Volume Interstate Segment.** Interstate segments which exceed the thresholds of peak hour percentages and traffic volume characteristics defined in Appendix D. For INDOT Construction Contracts, interstate segments that are identified as High-Volume must maintain a minimum of two open lanes each direction. [See](#) Appendices C and D for more information.
5. **Passenger Car Equivalent.** A Passenger Car Equivalent (PCE) is a unit used in traffic analyses to represent the impact of a large vehicle on a road by expressing it as the number of equivalent passenger vehicles. PCE factors are used to convert traffic counts of mixed heavy and light vehicles into an equivalent traffic stream consisting entirely of passenger cars. For the purposes of the policy, the methodology to convert raw traffic counts to PCEs is defined in the [Procedure to Convert Raw Traffic Counts to PCEs](#) in the [Queue Analysis Guidelines](#).
6. **Queue.** For the purposes of the policy, a queue is a line or lines of closely spaced vehicles on an interstate travelling below 30 mph in a congested condition.
7. **Queue Length.** Queue Length is the length of the pavement occupied by a queue and is measured from the point of the restriction toward oncoming traffic.

8. **Queue Mitigation Strategy.** Queue Mitigation Strategies are best management practices that reduce the dangers related to the presence of a queue. Queue mitigations strategies can be the application of technologies, such as Queue Detection and Warning Systems, or manned operations involving law enforcement or queue trucks. Although there are static strategies such as static signage, a dynamic strategy that adjusts based on current traffic conditions is preferred on freeways.

POLICY CONCEPTS

1. **Approver.** The party with authority to approve Policy Exception requests.
2. **Condition of Emergency Repair.** A Condition of Emergency Repair may be declared for repairs requiring lane or shoulder restrictions that must occur immediately without delay to respond to incidents with unplanned operations when needed to make repairs to Department infrastructure in response to a failure, incurred damage due to an incident, or for other reasons.
3. **Condition of Urgent Repair.** A Condition of Urgent Repair may be declared for repairs requiring lane or shoulder restrictions that must occur soon but not immediately to respond to incidents with unplanned operations when needed to make repairs to Department infrastructure in response to a failure, incurred damage due to an incident, or for other reasons. Work must be initiated within 24 hours of the determination or over a weekend when it is not possible to secure a Policy Exception.
4. **District Special Project Corridor Segments.** Segments along select interstate corridors identified by the District as needing special consideration or additional requirements for projects. See Appendix E.
5. **Exemption to the Policy.** Exemptions are operations and situations to which the policy does not apply. These operations and situations are outside of the scope of the policy.
6. **High Volume Interstate Segment.** Interstate segments identified by the Department as needing to have at least two lanes open at all times to prevent extensive queuing and the resulting undesirable exposure to safety risk that results when only one lane is maintained. The determination is based on a consideration of Peak Hour Volumes, Percentage Daily Vehicular Volumes, and Daily Truck Volumes. High Volume Interstate Segments are identified in the Tables in Appendix B. See Appendix D for additional details.
7. **IHCP Restriction Notification Form.** The notification document to be submitted to the relevant District traffic office for all work zone-related restrictions. This form summarizes the key information of all planned restrictions, including those for which a Policy Exception request is being sought, and documents all applicable Concurrences and Approvals. It is required for all restrictions within the Scope of this policy, except for restrictions declared as Emergency and Urgent Repairs per Appendix A.

8. **Policy Exception.** A document that provides formal authorization to implement restrictions affecting the interstates for work or operations that deviate from this policy and which (a) are not exempted by the policy, (b) are not deemed to be a Condition of Emergency Repair, (c) are not deemed to be a Condition of Urgent Repair, or (d) cannot be accomplished within the Select Interstate Restrictions and Times.
9. **Requestor.** The party responsible for (a) identifying the need for an interstate restriction, (b) for determining if the proposed restriction falls within the Select Interstate Restrictions and Times, (c) preparing and submitting a Policy Exception request, including any required analysis and supporting information. This party may be a permittee, a contractor, a consultant, Department staff or their designee. For restrictions relating to INDOT contracts, this is typically the designer of record or their designee.
10. **Responsible Site Supervisor.** The party in charge of implementing a restriction in the field. This party may be a permittee, a contractor, a consultant, Department staff or their designee.
11. **Reviewer.** The party responsible for facilitating the review and approval process within the Department and other interagency coordination. This typically includes coordinating restrictions with the Requestor, reviewing Policy Exception requests and forwarding reviewed Policy Exception requests on to the Approver for approval. Typically, the Reviewer is associated with a District Traffic Office. As needed, the Reviewer may also coordinate with the District Traffic Engineer to escalate a policy exception request to the Work Zone Council. If needed, the Reviewer will also coordinate with FHWA to obtain their concurrence.
12. **Select Interstate Restrictions and Times.** Restrictions that have been identified by the Department to minimize traffic impacts to the interstate and to allow for their safe implementation. See Appendix B.
13. **Work Zone Council.** For High-Volume Interstate Segments where two lanes cannot be maintained and a Policy Exception is being sought, this party will review all such Policy Exception requests for restriction consisting of a series of 24-hour closures totaling a duration of 15 to 30 days. The Work Zone Council (“Council”) may also assess such Policy Exception requests if the Approver escalates the review to the Council.
