INDOT Reference Post Book

July 2015 - Version 1.0

Back Ground

The last official version of the INDOT Reference Post Book was created in 2004 based on a tabular listing of routes and measures and was a time consuming manual process. This version of the Reference Post Book was created based on GIS data maintained by the Road Inventory Group of the Planning Division. The intent is to be able to update and reproduce the book annually at a minimum or more frequently if needed.

Reference Post Book Defined

The Reference Post book is a Route-by-Route listing of all INDOT Maintained Roads (Interstates, State Roads and US Highways) within Indiana. It traces the length of each route from beginning to end detailing the measures to significant points along the route. The significant points are Reference Posts, Street Intersections, Railroad Crossings, Bridges, Town or City Limits, County Lines, and locations of Concurrent Routes (Travel-Overs). Future versions may include small structures and other features that are deemed useful, as data is available for inclusion.

Appearance

The RP Book is organized by Route Type (Interstate then State Road then US Highways) and Route Number. The Bookmarks within the PDF version will direct the user to the selected road. The fields shown are:

"**Route**" which is the common route name (Ex. US 40, SR 3, I 70).

"**Reference Post + Offset**" is the Reference Post number and the offset in miles from the field location of the post to the feature being located (14+0.40 is 0.40 miles in the increasing direction from Post number 14).

"**Event**" is the indicator of what type of feature is being located (Ex. Bridge, Intersection, City or Town Limit).

“**Description**” is information about the feature being located such as street names for intersections or what route is being carried over what type of obstruction for bridges.

“**State Log Measure**” is the road inventory measure of the state roads. It generally starts at 0.00 at the beginning of each route and increases to the end of the route. In many cases the State Log Measure is not equal to the Post and Offset value.

“**County Log Route ID (LRS IS)**” is the Road Inventory ID created for each route including local streets and county roads. It is 17 character string with a certain amount of logic coded into the ID. The ID is made up of 6 parts that uniquely identify each piece of road.

- The first character is the jurisdiction code, 1 for Interstate, 2 for U.S. Highway and 9 is for State Routes.
- The next two characters are the numeric code for the counties in Indiana (01 for Adams , 02 for Allen…. etc).
- The next four characters represent the city code (0000 is for roads outside of any Corp. Limits, 0950 is for Indianapolis….etc).
- The next three characters indicate the road number (065 for I 65, 109 for State Road 109….etc).
- The next character is to indicate if the road section is a distributor collector, toll road, or other special type of route (0 Standard route, 5 is for toll roads, 7 is for Old State or US Routes, a letter is a designator for Distributers or Collectors).
- The next four characters or for the ramp designators (0000 is not a ramp, 104B is for the ramp at mile post 104 ramp B).
- The last two characters are the section code (01 thru 90 is the sequential order of non-continuous routes, 91-99 indicates a non inventory direction of a route, R1 thru R9 has been newly created to indicate rotaries or roundabouts).

If you have any desire to learn more about the LRS ID please contact the Road Inventory staff and we will be happy to make further explanations and/or share the Technical Code document that goes into more detail with examples of all of the elements of the LRS ID code.

"**County Log Measure**" is the running measurement along the route that beginnings at the point where the route crosses the county line and continues in an increasing direction to the point where the route crosses out of the county. Example: I 70 starts at the west line of Vigo County as LRS ID 18400000700000001 at measure 0.000 and continues to the east county line of Vigo County to measure 16.440 then it becomes LRS ID 11100000700000001 measure 0.000 and so on.

"**County**" is the name of the county the route is located in.

Limitations and Disclaimers

As this document is a human endeavor and humans make mistakes, please be aware that:

THERE ARE ERRORS, MISTAKES AND OMMISSIONS WITHIN THIS BOOK!

This book was created using digitized line work and data points and GPS located line work and data points stored and maintained within a GIS database. The line work is limited in accuracy to any aerial photography used or the accuracy of any GPS data collected. Not all data is field verified. Some data is created and checked using aerial photos and/or the video log photo set. Every effort has been made to assure that the information contained within this document is up to date and accurate. If, however, in the course of using this book you find an obvious error, or even a discrepancy that you feel needs to be investigated, please contact the person responsible for the latest version of the book listed below. All comments will be reviewed and used to update the next versions created. When reporting issues please provide the Route, the Post and Offset the Event and one of the measure values along with any information that would be helpful in properly locating, renaming, or eliminating the condition that is creating the error. Any future versions will only be as good as the input we receive from our customers.

Special Case

US 40 in Vigo County has a special issue that needs to be addressed. Due to relinquishments and creating a travel over for US 40, the alignment does not follow the historic path. US 40 now traverses where SR 46 has traditionally been and SR 46 is considered the Travel Over on US 40. However, the existing reference posts are still for the SR 46 route and are running in a contrary direction to the increasing direction of US 40. Therefore, for the purposes of this book, RP and Offset for the first 3 miles of US are based on the State Log Measure until it reaches the traditional location for US 40 and then jumps to RP 11 + 00 at the intersection of SR 46 and US 40. There may be other such instances within the State System. If you know of them or find

examples in this book, please inform the Road Inventory Staff so that we can address them for future versions.
