The data in this document is to be used for historical purposes only. It has been deemed unreliable for current locations.
What is new in the 2004 edition of the reference post book?

Reference Post Notation

The biggest, and most notable change in the 2004 Reference Post Book is the notation of the offset. In order to reduce confusion, the implied decimal point has been made explicit and is now a part of the offset. The offset now clearly notes the whole mile, tenth, hundredth and permits the future expansion to the thousandth of a mile.

Actual reference post notation has also changed. The new format includes the letters “RP” followed by an underscore, the route type (e.g. S – state road, U – US Route, I – Interstate), underscore, the route number, underscore, the word “Post”, underscore, and the post number e.g. RP_S_1_21. This change has come about for technical stability, usability, and clarity.

Additional (New) Information

This year we have added the known monuments in the Crawfordsville District. Noted as to type and position, they have been placed as close to the surveyed location as possible, but due to limitations in technology, and resources the locations identified are a general reference and should not be used for anything other than a quick guide to locate them.

This year also notes the inclusion of the “Continuous Log Mile”. The continuous log mile – noted at the right margin of each record – reflects the distance from the beginning of the route, continuously accumulating mileage until the end of the route.

General

Appearance

For simplicity in appearance and ease of use, the county number per line has been eliminated. The county of presence will continue to be noted at the beginning of that county’s section with the county name followed by the county’s number in parenthesis () enlarged and set off in the left margin.

Efforts have also been made to consolidate location references. Multiple events occurring at the same location have been edited to appear on one line rather than each element having its own line element. On occasion, a second line of text will appear due to formatting constraints.

Printing

The district area level books, while appearing to be organized by route type, then route number will actually print by numeric route value. For example, printing the Greenfield District Area book would result in: State Roads 1 through 22 then US 24 followed by State Roads 25, 26 and then US 27. This is a result of multiple requests from field and office personnel.

Bookmarks

The bookmarks included in the Adobe file(s) organize and present the routes by type, then number, and within each route the counties in order of occurrence from south to north, west to east. Each bookmark will quickly direct the user to the appropriate page within the document. Selecting the route type will direct the user to the first page of the first route of that type. Selecting the route number will direct the user to the first page of the route selected (the beginning of the route).
Selecting the county will direct the user to the first page of the route within that county. Regardless of the page or location within the document, the route is listed at the bottom of the page.

Page Numbers

Page numbers have been omitted from all versions. This will allow the user to print and organize the route information in a fashion most suited to that user’s needs.
