DISCLOSURES:

Past performance is not a guarantee or a reliable indicator of future results. Bond values fluctuate in response to changes in interest rates, the financial condition of individual issuers, general market and economic conditions. In general, when interest rates rise, bond values fall and investors may lose principal value. The use of derivatives may reduce returns and/or increase volatility. Active trading results in increased turnover and trading expenses, and may generate higher short-term capital gains. Certain investment strategies tend to increase the total risk of an investment (relative to the broader market). This Fund is exposed to foreign investment risk and mortgage- and asset-backed securities risk.

Fund performance is net of fees, except for the underlying PIMCO Total Return Fund component which is gross of fees prior to 4/1/2013 and net of fees after 4/1/2013.
