RETURNS

DISCLOSURES:

Past performance is not a guarantee or a reliable indicator of future results. An investment in the Fund could lose money over short or even long periods. You should expect the Fund’s share price and total return to fluctuate within a wide range, like the fluctuations of the overall stock market. The Fund’s performance could be hurt by stock market risk, which is the chance that stock prices overall will decline. Stock markets are volatile and can decline significantly in response to adverse issuer, political, regulatory, market, or economic developments. Further, the Fund’s performance could be hurt by investment style risk, which is the chance that returns from large-capitalization stocks will trail returns from the overall stock market. Large cap stocks tend to go through cycles of doing better – or worse – than the stock market in general. These periods have, in the past, lasted for as long as several years.

All data presented is calculated from manager composite performance prior to 4/1/2013.
