

Connecting to Indiana Secure WiFi

Follow the instructions to connect to Indiana Secure WiFi. The directions below are specific to iPhone, but the process will be similar for other devices.

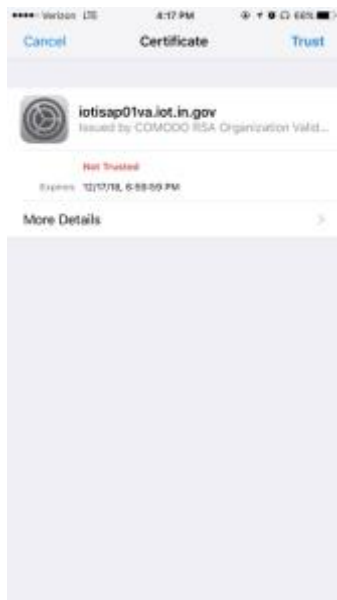

Open the WiFi settings on your device and find Indiana Secure WiFi

Click on the WiFi network and then enter your username and password. You may use either your State email address or your State domain and username (DOMAIN\username) combination

If you are prompted to trust a certificate, click Trust

You are now connected to Indiana Secure WiFi. If your device is not known to the network, i.e, registered in MobileIron or joined to Active Directory, you will need to log in to the guest network.

If so, please follow the instructions at <https://myshare.in.gov/IOT/NTS/Shared%20Documents/guestaccess.pdf> to log into or register for access to the guest network.
