CANCER is a group of diseases characterized by uncontrolled growth and spread of abnormal cells. Anyone can get cancer at any age; however, middle and older aged people are most likely to develop cancer. In Indiana, during 2006 to 2010, the overall cancer incidence rate was 480.4 per 100,000 people. Public Health District 6 (District 6), which is comprised of Blackford, Delaware, Fayette, Grant, Henry, Howard, Jay, Madison, Randolph, Tipton, Union and Wayne counties, had a rate of 489.8 per 100,000 people for the same time period.

Chances of Getting Cancer
- About 2.4 million Indiana residents, or two in five people now living in Indiana, will eventually develop cancer.
- In District 6, on average, during 2006 to 2010 3,791 residents were diagnosed with cancer each year.
  - 1,965 of those were male
  - 1,826 of those were female

Economic Impact of Cancer
- $1.01 billion was spent on the direct costs of treating Indiana residents with cancer in 2003.
- $2.76 billion is the estimate of what will be spent on the direct costs for cancer care in 2023 if current trends continue.

- Disparities between blacks and whites in cancer incidence and mortality rates have been decreasing.
- However, blacks still had almost a five percent greater incidence of cancer and over a 20 percent higher mortality rate than whites.
- In Indiana and the United States, for all cancers combined, and for the most common cancers (prostate, female breast, colorectal and lung), incidence and mortality rates have been lower among Hispanics than among non-Hispanic whites.

District 6 and Lung Cancer
District 6 has a significantly higher rate of lung and bronchus cancer compared to the state rate. You can play a vital role in addressing this cancer burden.
- **First, learn about lung cancer.** Research has found several risk factors for lung cancer. However, tobacco use is still the leading risk factor.
- **Second, support local smoke-free air policies and promote public awareness campaigns.** Policy, system and environmental interventions are among the most cost-effective approaches to control tobacco use and prevent cancer death.
- **Third, demonstrate leadership.** Help our statewide coalition implement evidence-based cancer control interventions within your district and around the state.

The District’s four highest-burden cancers mimic those of the state and include prostate, breast, colorectal and lung cancer. During 2006 to 2010, the District 6 lung cancer incidence rate of 83.6 per 100,000 people was significantly higher than the state’s (77.7 per 100,000 people). For prostate, breast and colorectal cancer, the District 6 incidence rate was comparable to the state incidence rate [see Figure 2].

Know Your Risk

- Smoking accounts for 87 percent of lung cancer deaths and at least 30 percent of all cancer deaths. If all tobacco smoking was stopped, the occurrence of lung cancer would decrease by an estimated 90 percent, however, 26.8 percent of adults in District 6 continue to smoke, putting them at greater risk for developing lung and other types of cancer.
- During 2001 to 2010, 62.6 percent of Indiana adults were considered overweight or obese (defined by having a body mass index of more than 25). In District 6, Tipton County has the lowest percentage of overweight or obese adults at 61.3 percent and Fayette County tops the list at 69.9 percent. As far as physical activity, 83.1 percent of Indiana adults reported not getting the recommended 150 minutes per week of physical activity. For District 6, Grant County tops the list with 87.1 percent of adults reporting not getting the recommended 150 minutes per week of physical activity.
- Many cancers can be prevented or identified at an early stage if people obtain early detection screenings [See Figure 3].

TAKE ACTION: Steps you can take to prevent or control cancer

- Be tobacco free.
- Avoid secondhand smoke.
- Limit alcohol consumption.
- Maintain a healthy weight throughout life.
- Consume a healthy diet that:
  - Emphasizes plant sources.
  - Supports a healthy weight.
  - Includes five or more servings of a variety of vegetables and fruit each day.
  - Includes whole grains in preference to processed (refined) grains.
  - Has minimal processed and red meats.
- Adopt a physically active lifestyle.
- Protect yourself from too much sun exposure.
- Talk to your primary health care provider about:
  - Any potential signs and symptoms of cancer, including unexplained weight loss, fever, fatigue, pain and skin changes.
  - Cancer screening options for breast, cervical, colorectal and prostates cancers.
  - Vaccines that can reduce your risk for developing cancer, like hepatitis B and human papillomavirus (HPV).

GET INVOLVED: Join the Indiana Cancer Consortium (ICC)

- Join your regional cancer coalition! Learn more about local cancer control efforts and become a member at [www.indianacancer.org](http://www.indianacancer.org).
- Join the Indiana Cancer Consortium (ICC)! The ICC is a statewide network of over 100 agencies including the Indiana State Department of Health.
- Help reduce the cancer burden in Indiana through the development, implementation and evaluation of a comprehensive plan that addresses cancer across the continuum from prevention through palliation.
- Become a member at [www.indianacancer.org](http://www.indianacancer.org).

Community resources

- To get help with tobacco cessation, call the [Indiana Tobacco Quitline](http://www.quitnowindiana.com) at 1-800-QUIT-NOW (800-784-8669) or visit [www.quitnowindiana.com](http://www.quitnowindiana.com).
- To help Hoosiers and their families eat better, move more and avoid tobacco, go to INShape Indiana at [www.inshapeindiana.org](http://www.inshapeindiana.org).
- To learn more about how to support healthy eating and physical activity throughout Indiana, visit the Indiana Healthy Weight Initiative at [www.inhealthyweight.org](http://www.inhealthyweight.org).
