Guidelines for the Assessment and Educational Evaluation of Deaf and Hard of Hearing Children in Indiana

Based on 511 IAC Article 7, 2014
This document is dedicated to all deaf and hard of hearing children in Indiana and their families. Since 1843, deaf and hard of hearing children have been educated in this state and become productive citizens. The purpose of this guide is to ensure that all deaf and hard of hearing children leave the educational system with the knowledge and tools they need to maximize their potential. This guide was developed to help educators use assessment information and evaluations to help parents and case conference committees determine how to meet students’ educational needs.

This guide is made possible by the teamwork and collaboration of audiologists, psychologists, speech pathologists, language specialists, social workers and parents. We also thank additional contributors, including (but not limited to):

Lorinda Bartlett
Pam Burchett
Tina Caloud
Linda Charlebois
Joyce Conner
Louise Fitzpatrick
Janet Fuller
Amanda Hager
Angela Hull
Jacqueline D. Hall-Katter
Sarah Kiefer
Cindy Lawrence

Debra Liebrich
Rachel Mehringer
Carolyn Pimentel
Dana Ramsey
Susan Sehgal
Shannon Stafford
Katie Taylor
Terri Waddell-Motter
Michelle Wagner-Escobar
Sheryl Whiteman
Carol Wild
Mary Zuercher

We would like to thank peer reviewers who share the vision of improving educational outcomes for deaf and hard of hearing children.

The 2017 Revisions to Guidelines for the Assessment and Educational Evaluation of Deaf and Hard of hearing Children in Indiana, based on the Article 7 changes of 2014, was modified by Assessment staff at the Center for Deaf and Hard of Hearing Education. The staff includes diverse professionals and parents including those who are Deaf, hearing, and hard of hearing; those raised in environments using spoken English; and others, who grew up as proficient users of American Sign Language (ASL) in the Deaf community. This guide represents a consensus of this diverse population. Comments or questions regarding these guidelines may be addressed to The Center for Deaf and Hard of Hearing Education, 2 North Meridian, Indianapolis, Indiana 46204, 317-232-7349, cdhhe@isdh.in.gov.

Notice
The guidance in Guidelines for the Assessment and Educational Evaluation of Deaf and Hard of hearing Children in Indiana, Based on 511 IAC Article 7, 2008, is not binding on local educational agencies or other entities. Except for the statutes, regulations, and court decisions that are referenced herein, the document is exemplary, and compliance with it is not mandatory.

PREFACE

All children have the right to a free appropriate public education (FAPE) in their least restrictive environment (LRE) in order to have the opportunity to succeed. An educational evaluation of a child’s strengths and areas for improvement provide professionals with the insight needed to allow for that success.

In December 2010, Indiana’s special education rules were promulgated in Indiana Code 511 IAC 7-32 through 7-47. The eligibility requirements changed to look at evaluation data most impacted by the child’s “disability.” Cognitive evaluations are no longer required for the more than 2,000 deaf or hard of hearing students in the state of Indiana. Absence of hearing does not cause cognitive delays. However, professionals and families must keep in mind that a lack of exposure to language early in life can affect cognitive functioning.

The Universal Newborn Hearing Screening (UNHS) legislation enacted in 2000 also created the opportunity for early identification of hearing levels in infants leading to earlier opportunities for parental support and the development of communication and language. Many of these children, given appropriate early intervention services, are arriving in our schools with language and communication commensurate with their hearing peers. Before 2000, the average age of identification was 2.5 years of age, leading most educators to spend the early years focusing on closing a significant language gap. While not every child is identified early and begins receiving early intervention, that is our goal for all children.

The caveat is that many students do not perform as well as we would anticipate, and they will continue to need a comprehensive evaluation to develop specific, appropriate academic goals unique to each student. Expectations for these students should align with hearing peers for all facets of language and achievement. Perhaps an additional concern, such as a specific learning disability or emotional challenges, interferes with the child’s learning. It is important to look at the whole child so that academic and methodology decisions are not based solely on a child’s audiogram and communication skills. Parents and professionals need to consider the child’s cultural background, cognitive potential, thinking skills, preferred mode of communication, learning style and academic abilities when making critical decisions. All factors need to be considered to raise the bar for academic success, and all children need to meet their full potential.

This guide is in accordance to the Indiana State Board of Education Special Education Rules, Article 7 found at the following web address:

**Deaf or hard of hearing** defined:

a) “Deaf or hard of hearing,” which may be referred to as a hearing impairment, means the following:

1) a disability that, with or without amplification, adversely affects the student’s:
   A) ability to use hearing for developing language and learning,
   B) educational performance
   C) developmental progress
2) the hearing levels may be:
   A) permanent or fluctuating
   B) mild to profound
   C) unilateral or bilateral

3) students who are deaf or hard of hearing may use:
   A) spoken language,
   B) sign language
   C) a combination of spoken language and signed systems

According to Rule 26, certain eligibility components are minimally required to be synthesized in an educational evaluation for each suspected area of eligibility. For a child who is deaf or hard of hearing, the following is required:

• Assessment of academic achievement, defined by 511 IAC 7-32-6
• Evaluation of functional skills or adaptive behavior across various environments and from multiple sources
• Evaluation of communication skills
• Completion of a social and developmental history
• Written report from an educational or clinical audiologist, otologist, or otolaryngologist
• Any other educational evaluations or information necessary to determine eligibility and inform the case conference committee

The first five components are included with the initial eligibility determination. The last component may be the most overlooked and the most critical. This provides for the educational evaluation of areas that are most relevant for students who are deaf or hard of hearing, such as cognition, motor and sensory abilities, and obtaining relevant medical information. To determine if the language and communication skills are commensurate with the student’s cognitive abilities, especially for children identified early, information regarding cognitive potential is important. Because of the particularly high incidence (40 to 50 percent) of accompanying exceptionalities in this population, it is especially important that attention be given to these areas as well. Though not included in this guide, occupational and physical therapy evaluation may provide invaluable information for some students and can be included under the last component.

The information that follows is a collection of suggestions for parents and professionals to use in determining what should be included in an educational evaluation procedure, along with best practices for administration.
In looking at each student as a whole and attempting to meet his or her unique needs, the student’s Individualized Education Plan (IEP) is developed, once eligibility is established, by the case conference committee. The following components listed provide information that will help the IEP team determine whether the eligibility criteria are met. See Appendix III for the full list of eligibility criteria. As part of this educational evaluation process, the following interrelated variables should be considered:

- **Audiological Factors**
  - Age of onset and age of identification
  - Age of full-time amplification
  - Auditory skills and use of residual hearing
  - Effectiveness of hearing technology
  - Etiology of the hearing loss
  - Type and degree of hearing loss

- **Behavioral Factors**
  - Attitude and motivation level of the student
  - Psychosocial behaviors

- **Communication Factors**
  - Augmentative communication devices; assistive technology
  - Language abilities or disabilities
  - Primary language
  - Preferred mode of communication

- **Educational Factors**
  - Additional eligibilities or exceptionalities
  - Attendance consistency and stability
  - Early education (First Steps, preschool, etc.)
  - Performance on curriculum-based assessments and measures

- **Social-Developmental-Medical Factors**
  - Family history (i.e., home language, cultural factors, etc.)
  - Genetic history
  - Medical issues/concerns: risk factors (i.e., birth trauma, infections, syndromes and medical alerts), mental health, routine medications, etc.
  - Parent knowledge and support
  - Vision status

The importance of parental involvement during the educational evaluation process is critical. Therefore, parents provide information for the following components:

- Birth history and Universal Newborn Hearing Screening results
- Medical and audiological histories
- Social and developmental history
- Mode of communication, home language, cultural factors
- Educational history, (e.g., grades and portfolios)
- Description of the child’s/student’s strengths, weaknesses and interests
- Description of the child’s/student’s temperament and behavior
- Other pertinent information
- Complete adaptive behavior or other inventories as requested
PERSONS CONDUCTING THE EDUCATIONAL EVALUATION

Evaluations should be conducted by personnel who understand and are specifically trained to work with deaf and hard of hearing students. They should have knowledge about research, technological innovations, language and child development, diversity within the Deaf Community, and resources for families and professionals. Personnel should be skilled in administering the evaluation tools and have the necessary qualifications as listed in the test manuals and in interpreting the results to ensure nondiscriminatory testing. Personnel administering evaluation tools must be able to communicate in the student’s native language or mode of communication. This is essential in making collaborative and informed decisions about their educational needs.

Recommendations are based on the results of the evaluation as they relate to the impact of hearing on communication, language, literacy, social-emotional behaviors and academic competency. A multidisciplinary evaluation may include the following licensed personnel, as appropriate:

- American Sign Language (ASL) Specialist
- Audiologist
- Deaf Educator
- Early Childhood Specialist
- Educational Consultant
- Occupational Therapist
- Physical Therapist
- School Psychologist
- Social Worker
- Speech-Language Pathologist
- Teacher of deaf and hard of hearing students

To better facilitate collaborative testing between the Center Assessment Team and local school assessment professionals, we recommend using the DHH Evaluation Delegation Sheet (see page 36 of this document).

AREAS THAT MAYBE EVALUATED

Auditory Abilities and Skills

The goals of the evaluation include confirmation and determination of potential educational impact. This information will help guide appropriate planning for educational and classroom accommodations to promote auditory access to the curriculum.

An assessment should provide necessary information regarding the nature and degree of hearing, the child’s auditory perception skills and abilities, use and benefit from amplification and assistive technology, and specifics related to their auditory and listening performance in the typical classroom. To ensure appropriate expectations, consider the overall needs of the student with respect to chronological age, age of full-time device use, and language and academic skills expected of their same aged peers. Speech perception testing should be completed under ideal
listening conditions, as well as under simulated classroom conditions and may include traditional sound booth testing, classroom observation and input from the student’s instructors. In addition, these skills should be assessed in auditory-only and combined auditory and visual conditions to determine how the child is accessing academic information. The following is a guide for assessment and is not an exhaustive list.

<table>
<thead>
<tr>
<th>Areas of Audiological Evaluation</th>
<th>Assessment Tools</th>
</tr>
</thead>
</table>
| **Case History Review**          | • Universal Newborn Hearing Screening results  
• Medical history, including pre-, peri-, and post-natal history  
• Family history  
• Additional risk factors for hearing loss |
| **Otосcopy**                     | • Visual inspection of the structure of the outer ear, ear canal and eardrum |
| **Physiologic Assessment or Objective Measures of Auditory System** | • Immittance measures  
  - Tympanometry  
  - Acoustic reflexes  
• Otoacoustic Emissions  
  - Distortion product otoacoustic emissions (DPOAEs)  
  - Transient evoked otoacoustic emissions (TEOAEs)  
• Auditory Brainstem Response (ABR) |
| **Measures to Determine Nature and Degree of Hearing loss** | • Pure tone testing (air and bone conduction)  
• Speech Awareness Threshold (SAT) or Speech Detection Threshold (SDT)  
• Speech Reception Threshold (SRT)  
• Word recognition testing |
| **Assessments of Auditory Function with amplification and assistive technology–Speech Perception** | • Emerging Auditory Perception Skills  
  o Ling Seven-Sounds Test (Detection and Recognition)  
  o Early Speech Perception (ESP) test  
  o Environmental Sound Recognition tests  
    • Sound Effects Recognition Task  
    • Familiar Sounds Test  
• Word Recognition- Open- and Closed-Set Tests  
  o Northwestern University Children’s Perception of Speech (NU-CHIPS)  
  o Word Intelligibility by Picture Identification (WIPI)  
  o PB-Kindergarten Lists  
  o Lexical Neighborhood Test (LNT)  
  o Multisyllabic Lexical Neighborhood Test (MLNT)  
  o CID W-22 Lists  
  o NU-6 Lists  
• Speech Recognition for Sentences and Phrases  
  o Pediatric Speech Intelligibility Test (PSI)  
  o Bamford-Kowal-Bench Speech in Noise Test (BKB-SIN)  
  o QuickSIN |
A communication evaluation includes signed, spoken, and/or written language, as deemed appropriate for the individual. This evaluation may include the testing and gathering of information in the following areas:

- Articulation and phonological skills
- Augmentative/Alternative communication needs
- Basic Interpersonal Communication Skills (BICS)
- Cognitive Academic Language Proficiency (CALP)
- Executive function skills as it relates to language
- Expressive and receptive language
- Fluency
- Listening skills
- Intelligibility of connected speech
- Metacognitive language skills
- Oral motor function as needed
- Phonemic awareness
- Pragmatics/discourse
- Printed language skills
- Prosodic features: intonation, pitch, rhythm, and stress
- Self-advocacy and independence with communication
- Thinking and reasoning skills
- Voice quality, including nasality

The child’s performance on the communication evaluation provides information regarding the child’s language skills and language learning style on a battery of age-appropriate standardized test measures, as well as the need for the case conference committee to investigate interventions and approaches to education. The evaluation needs to interpret the findings to provide information on strategies to assist the child on mastering skills, prognosis of improvement with current interventions and suggestions for modifications and accommodations to encourage language development and growth. As age-appropriate language is essential to reading development, consideration of the student’s skills are an important component with the development of an Individualized Education Plan. Additionally, the evaluation needs to investigate a student’s functional social language and the cognitive language essential to school success; therefore, informal observations or other tools are beneficial. Evaluators’ decisions should not be invested in only one tool or instrument when determining eligibility or intervention. Individuals conducting the evaluations should be intimately familiar with normal language developmental language milestones for 3-21 years and expect deaf or hard of hearing students to meet these milestones without lowering expectations.

The following list of instruments for the evaluation of speech and language skills is intended to serve as a guide and is not an exhaustive list. When in doubt, contact the Center for Deaf and Hard of Hearing Education for consultation or for an evaluation at no cost.

### Articulation and Speech Production

- Cottage Acquisition Scales for Listening, Language & Speech
- Functional Auditory Performance Indicators (FAPI)
- Infant–Toddler Meaningful Auditory Integration Scale (IT-MAIS)
- Ling 7 sound check
- Listening Comprehension Test 2
- Listening Inventory for Education (L.I.F.E.)
- Oral Passage Understanding Scales
- Test of Auditory Processing Skills 3

Note: many auditory perceptual skills with students should be monitored with ongoing intervention and tracking tools and are not appropriately assessed with a onetime assessment measure.

#### Arizona Articulation Proficiency Scale 3rd edition
- CID Picture Spine
- Clinical Assessment of Articulation and Phonology (CAAP) 2
- Goldman-Fristoe Test of Articulation 3rd Edition
- Phonological Awareness Test
- Sunny Artic Test for the iPad
- Linguisystems Articulation Test
- Kahn-Lewis Phonological Analysis-3
- Photo Articulation Test – 3
- Test of Language Development Fourth Edition Primary

### Semantics

- Articulation and Speech Production: the ability to form and produce words accurately and the ability to improve production with feedback, including prosodic features (i.e., intonation, pitch, rhythm, and stress), voice quality (including nasality), and the intelligibility of connected speech

- Arizona Articulation Proficiency Scale 3rd edition
- CID Picture Spine
- Clinical Assessment of Articulation and Phonology (CAAP) 2
- Goldman-Fristoe Test of Articulation 3rd Edition
- Phonological Awareness Test
- Sunny Artic Test for the iPad
- Linguisystems Articulation Test
- Kahn-Lewis Phonological Analysis-3
- Photo Articulation Test – 3
- Test of Language Development Fourth Edition Primary

- Clinical Evaluation of Language Fundamentals, 5th edition (CELF-5) & Preschool
- Clinical Evaluation of Language Fundamentals-5th Edition Metalinguistics
- Comprehensive Assessment of Spoken Language second edition (CASK-2)
- Comprehensive Receptive and Expressive Vocabulary 3
- Expressive Language Test – 2:NU
- Expressive One Word Picture Vocabulary Test 4
- Expressive Vocabulary Test 2
- Language Processing Test 3, Elementary
- Language sample analysis (most appropriately used with ages 2-5)
- Listening Comprehension Test 2
- The MacArthur-Bates Communicative Developmental Inventory
- Comprehensive Assessment of Spoken Language second edition (CASK-2)
- Expressive Language Test – 2:NU
- Expressive One Word Picture Vocabulary Test 4
- Expressive Vocabulary Test 2
- Language Processing Test 3, Elementary
- Language sample analysis (most appropriately used with ages 2-5)
- Listening Comprehension Test 2
- The MacArthur-Bates Communicative Developmental Inventory
- Montgomery Assessment of Vocabulary Acquisition for the iPad
- Peabody Picture Vocabulary Test 4 (PPVT4)
- Preschool Language Scale 5
- Receptive, Expressive & Social Communication Assessment
- Receptive One Word Picture Vocabulary Test 4
- Test of Adolescent and Adult Language 4
- Test for Auditory Comprehension of Language 3
- Test of Early Language Development 4
- Test of Integration of Language and Literacy Skills
<p>| <strong>Syntax</strong>: receptive and expressive abilities in the use of word order and morphemes to create grammatically correct sentences |
|• Test of Language Development, Primary, Fourth Edition (TOLD-P:4) and Test of Language Development: Intermediate, Fourth Edition (TOLD: I-4) |
|• Test of Semantic Reasoning |
|• Test of Semantic Skills, Primary and Intermediate |
|• The Word Test 2 (elementary &amp; adolescent) |
|• Wigg Assessment of Basic Concepts |
|• Word Test and Word Test 2 |
|<strong>Pragmatics and Discourse</strong>: the ability to use language for self-advocacy and independence; the ability to hold a socially appropriate conversation at the basic interpersonal level as well as the abstract, complex level |
|• Clinical Evaluation of Language Fundamentals, 5 (CELF-5) &amp; Preschool |
|• Comprehensive Assessment of Spoken Language 2 (CASL2) |
|• Expressive Language Test 2:NU |
|• Oral and Written Language Scale 2 (oral scale, ages 3–2; written scale, ages 5–21) |
|• Receptive, Expressive &amp; Social Communication Assessment |
|• Test of Auditory Comprehension of Language 3 |
|• Test of Integration of Language and Literacy Skills |
|<strong>Thinking and Reasoning</strong>: the ability to use language to reason solutions, solve problems, and other executive function skills that include, but are not limited to: organization, abstract concepts, humor, planning, attention and memory |
|• Adolescent Test of Problem Solving |
|• Clinical Evaluation of Language Fundamentals-5th Edition Metalinguistics |
|• Language sample analysis |
|• Listening Comprehension Test 2 |

<th>Functional Language: When students are in need of a more functional or life skills approach but still need a description or assessment of their language skills</th>
</tr>
</thead>
<tbody>
<tr>
<td>American Sign Language (ASL): a visual-spatial language used in the United States and parts of Canada. In the brain, linguistic information is processed through the eyes and conveyed by the movement of hands and nonmanual signals. ASL has its own rules of grammar, phonology, morphology, semantics, syntax and pragmatics; therefore, signing a test intended for spoken English will often result in difficulties and invalid results, particularly if grammar and vocabulary are significant portions of the test. This practice is not recommended. Some test that focus on language reasoning can be signed and provided essential cognitive academic language information</td>

Areas of a Psychoeducational Evaluation

A psychological evaluation includes the testing and interpretation of human development and learning domains (i.e., cognitive, achievement, adaptive behavior, emotional, social, behavior, language and perceptual-motor) within a collaborative, databased frame, respecting diversity of student strengths, needs, learning styles and cultures. Standardized evaluations may provide information regarding the student’s skills and abilities in comparison with that of hearing peers. It is important to consider the evaluation results in conjunction with other evaluation information (e.g., criterion-referenced educational evaluation, portfolio educational evaluation, etc.) when developing the individualized education program. In addition to taking part in academic achievement testing for initial and additional evaluations, deaf and hard of hearing students should participate in the age-appropriate statewide and local educational evaluation programs unless they qualify for alternative forms of testing as determined by established criteria.

If a child is delayed in any area, a test of intellectual functioning may be conducted as part of the evaluation, if deemed appropriate by the team. Current best practices recommend the assessment of both verbal and nonverbal abilities as language reasoning is considered a good indicator of academic functioning. Verbal reasoning abilities should be considered along with the student’s performance on the language skills measures. An educational evaluation of visual perceptual skills is of great significance for a student who relies heavily on the visual channel for communication. Early identification of areas of weakness is important. Areas evaluated may include visual discrimination, visual memory, visual-motor integration, visual figure-ground, visual closure and spatial relations.

Pre-Academic Skills, or a developmental evaluation of readiness skills (e.g., visual discrimination skills, identification of letters and numbers, identification of body parts, matching, predicting, sorting, and basic concepts) is important for developing IEP goals and objectives and for determining when the child is able to acquire age-appropriate standards leading to academic instruction.

Achievement, or an evaluation of academic skills should provide information regarding the student’s present level of functioning. This may include formal, standardized evaluations of student’s skills as well as a review of academic progress in their current program and documentation of previous assessment data as pertinent to the current referral.

Adaptive behavior rating scales may be used for deaf or hard of hearing children for initial eligibility referrals as well as for those who are very young or who have multiple disabilities. Areas evaluated may include self-help skills, daily living skills, independent functioning, and communication and social skills.
Social-emotional maturity should be a major component of the educational evaluation process for a deaf or hard of hearing student. Communication problems that result from lack of access to meaningful language contribute toward the development of personality and social/emotional adjustment. Emotional factors have a direct influence on the learning behavior. Social-emotional evaluations examine self-image, social/interpersonal skills, emotional adjustment, and life-style expectations.

The evaluation of visual-perceptual motor skills may be especially significant for deaf and hard of hearing students. Etiologies such as meningitis, rubella, and neurologically based hearing levels may result in vestibular damage affecting an individual’s equilibrium, body awareness, and visual-motor functioning. If a student is referred for a comprehensive motor evaluation, it should be conducted by an occupational therapist or a physical therapist. Areas evaluated may include both fine- and gross-motor skills.

In addition to other testing, if one or more of the following symptoms are noted, screening for Usher Syndrome is strongly recommended:

- Balance problems
- Decreased night vision
- Gradual loss of visual field
- Profound hearing levels from birth with balance problems
- Moderately-severe hearing levels from birth with normal balance
- Normal hearing at birth with progressive hearing levels beginning in childhood or the early teen years

Follow-up with qualified medical professionals is needed to establish additional deaf-blind eligibility for appropriate programming. Identified students should be reported to the Indiana Deaf-Blind Registry for additional services as this combination limits access to auditory and visual information and creates unique challenges for communication and education.

This is not an exhaustive list and only select subtests from the following tests are deemed appropriate for specific students. When in doubt, contact the Center for Deaf and Hard of Hearing Education for consultation or for an evaluation at no cost.

- Bender Visual Motor Gestalt II
- Developmental Test of Visual Perception-3
- Motor-Free Visual Perception Test-4
- Test of Visual Perceptual Skills—Fourth Edition (TVPS-4)

Collaborative Play-Based Assessment

When making plans for the education of young children who are transitioning into preschool (such as Part C to Part B) or are preschool age, a thorough evaluation of their skills is important. This evaluation may best be conducted by the multidisciplinary assessment team in collaboration with a teacher of the deaf/early intervention specialist or First Steps provider who is proficient in the child’s primary language or mode of communication.

Tests Administered in the Primary Language and Preferred Language Mode

Valid results are obtained when tests are provided and administered in the student’s primary language and preferred mode of communication. The important issue is that the students’ preferred language, which may be signed or spoken (with or without the support of signs or cues), must be respected. In doing so, the students’ primary or preferred language should be used throughout the educational evaluation. Please note that Manually Coded English systems, such as Signing Exact English, Cued Speech, and Visual Phonics are not considered forms of language, rather they are systems of expressing phonemes and/or grammar of spoken English.

If assessing verbal or language-comprehension abilities and using an interpreter, there are challenges (e.g., errors in translation from examiner to student and vice versa). Test translations often result in significant changes in the underlying psychological constructs assessed by the translated version, altering test validity and possibility resulting in errors leading to serious consequences when decisions are made based on inaccurate translations.
Communication Mode

The determination of how a family and child will communicate is a critical decision. A comprehensive assessment including audiological test results and an in-depth language evaluation will be crucial in providing information to guide informed decision making in this area. Evaluation should provide guidance in determining:

- If hearing levels (with or without hearing technology) will allow a child sufficient access to learn language through audition in a manner and time-frame that will allow for communicative competence, basic interpersonal communication skills and cognitive academic language proficiency
- Whether American Sign Language will enhance a child’s communicative competence and potential to develop basic interpersonal communication skills and cognitive academic language proficiency
- If the addition of visual supports and systems provide sufficient access to auditory language

Readers are encouraged to review the Deaf/Hard of Hearing Eligibility Checklist in Appendix III as well as the Consideration of Special Factors When an Indiana Student is Deaf or Hard of Hearing in Appendix IV located at the end of this document. The purpose of the checklist and special factors worksheet is to assist the case conference committee in the decision of whether a student meets the eligibility criteria documented in the Indiana Special Education Rules Article 7, 2010 (511 IAC 7-41-4). The Considerations of Special Factors worksheet provides structure for discussion by the case conference committee regarding: language and communication needs; opportunities for direct communication with peers and professional personnel in the student’s language and communication mode; academic level; and full range of needs, including opportunities for direct instruction in the student’s language and communication mode. The eligibility checklist and special factors worksheet when a child has been determined eligible for special education services may be included with the multidisciplinary team assessment reports from the Center for Deaf and Hard of Hearing Education Assessment Team.

STATEWIDE RESOURCES AND SERVICES FOR DEAF AND HARD OF HEARING STUDENTS IN INDIANA

For some of their educational evaluation needs, local educational agencies may decide to refer deaf and hard of hearing students to the Center for Deaf and Hard of Hearing Education. Assessments may occur at the central location in Indianapolis or one of the Center’s regional locations.

In 2012, the Center for Deaf and Hard of Hearing Education was established by legislation. The purpose of the Center for Deaf and Hard of Hearing Education is “to support parental choice, including the full continuum of communication options [including American Sign Language, other forms of sign language, cued speech, listening and spoken language (oral), or any combination of these skills].” The Center for Deaf and Hard of Hearing Education’s goal is “to ensure that children who are deaf and children who are hard of hearing acquire optimal
language skills and academic abilities, regardless of the mode of communication used.” (IC 20-35-11).

As part of transition plan duties determined in 2012, the Center for Deaf and Hard of Hearing Education’s Assessment Team professionals provide testing of deaf and hard of hearing students in their communication mode — sign language, spoken communication or a combination. Referrals to the Center for Deaf and Hard of Hearing Education are made for a variety of reasons, including questions regarding eligibility for special education, concerns regarding lack of progress, behavioral challenges, specific educational struggles, or a need for the Center for Deaf and Hard of Hearing Education’s participation in the case conference. The Center for Deaf and Hard of Hearing Education typically works in conjunction with the director of special education at the local school level or by another local education agency representative. The referral form is available on the Center for Deaf and Hard of Hearing Education website, and in the appendices of this document. Referrals are received directly from parents, schools, physicians and other agencies.

The Center for Deaf and Hard of Hearing Education collaborates with local educational, clinical professionals and students’ parents to provide a complete evaluation of the student. The professionals at the Center for Deaf and Hard of Hearing Education can complete a file review of previous educational and medical records, test results already completed by the local schools, and other independent evaluations to determine the need for additional formal and informal testing, observation and parent/guardian interview. Using recent audiological test results from the student’s primary audiologist, spoken English evaluations from his or her speech-language therapist, and academic testing or progress monitoring administered in the student’s educational setting avoids duplication or invalidation of test measures used at the Center for Deaf and Hard of Hearing Education and saves the student from unnecessary testing. Any members of the child’s educational team are encouraged to be a part of the assessment day at the Center for Deaf and Hard of Hearing Education and are welcome to provide information, which might assist the assessment team in gathering more comprehensive data during the relatively brief, one-day evaluation. Furthermore, the Center for Deaf and Hard of Hearing Education gathers observations from teachers or will travel to conduct observations in the natural environment, as appropriate, to include in our comprehensive assessment reports (see form on pages 38-40 of this document). As in all successful educational evaluations, parents are an integral part of the team, providing important social, developmental, communication and emotional information.

The Center for Deaf and Hard of Hearing Education offers a multidisciplinary team of professionals who are knowledgeable in the unique needs of deaf and hard of hearing students and who conduct an intensive diagnostic study of the child. The team collects information through formal and informal testing, observation analysis, and parent interviews. At the end of the evaluation, members of the evaluation team meet with the parents and school personnel to discuss the diagnostic findings and to outline educational recommendations based on the students’ identified strengths and areas of need.
This glossary is included to provide clear definitions and descriptions of the terms used in the educational evaluation of children who are deaf and hard of hearing. When culturally and linguistically appropriate, the term *elevated hearing levels* may be used in place of hearing loss.

**Acoustics**: pertaining to sound, the sense of hearing, or the science of sound

**Acoustic room treatment**: the use of sound-absorbing materials (such as carpets and acoustical tile) to reduce room noise and reduce the signal-to-noise ratio, thus enhancing the usefulness of hearing aids and other listening devices

**Acquired hearing loss**: a hearing loss that is not present at birth; sometimes referred to as an adventitious loss

**Air conduction (AC)**: sound from the air delivered through the ear canal, the eardrum and middle ear to the inner ear

**Ambient noise**: background noise that may interfere with the main speech signal

**American Sign Language (ASL)**: a visual-spatial language used in the United States and Canada. In the brain, linguistic information is processed through the eyes and conveyed by the movement of hands and non-manual signals. ASL has its own rules of grammar, phonology, morphology, semantics, syntax and pragmatics

**Amplification**: the use of hearing aids and other electronic devices to increase the loudness of sound

**Asymmetrical hearing loss**: different degree and/or configuration of hearing loss in each ear

**Assistive listening devices (ALDs)**: all types of electronic systems including FM/DM systems, infrared systems, special input devices for telephone or television, amplified alarms and signals, etc.

**Audiogram**: the graph on which a person’s threshold (loudness level at which a person just perceives a sound) is plotted for different frequencies (i.e. pitches)

**Auditory-based intervention**: provided by a professional who utilizes specific listening and spoken language strategies to maximize a student’s auditory skills to develop their spoken language

**Auditory neuropathy spectrum disorder (ANSD)**: a type of hearing loss in which the outer hair cells within the cochlea are present and functional, but sound information is not adequately transmitted to the brain via the auditory nerve

**Auditory/oral**: see Listening and Spoken Language definition

**Aural habilitation**: therapy designed to make use of a child’s residual hearing with the potential of closing the gap between their language age and chronological age

**Aural rehabilitation**: therapy designed to make use of a child’s residual hearing who may have a more significant gap between their language age and chronological age that requires more intensive services than aural habilitation

**Bicultural**: membership in two cultures, such as deaf culture and hearing culture

**Bilateral**: refers to two sides (e.g. bilateral hearing loss)
**Bilingual:** being fluent in two languages

**Bilingual Bicultural Education (BiBi):** programs that use sign language as the native, or first, language of deaf children. English, spoken and/or written, is viewed as a secondary language to be acquired at the same time as the native language. In BiBi education, sign language is the primary method of instruction. The bicultural aspect of BiBi education emphasizes Deaf Culture and strives to create confidence in deaf students by exposing them to the Deaf Community

**Bimodal:** The simultaneous use of two different forms of amplification such as a hearing aid on one ear and cochlear implant on the other ear

**Bone conduction:** sound received through the vibration of the bones of the skull

**C-Print:** a speech-to-text system (captioning) technology used to provide communication access to individuals

**Central Auditory Processing Disorder (CAPD) or Auditory Processing Disorder (APD):** a disorder characterized by challenges in the processing of auditory information within the central nervous system

**Classroom Audio Distribution System (CADS):** electroacoustic distribution of the audio portion of spoken communications and curricular throughout a targeting listening area (formerly referred to as soundfield systems)

**Cochlear implant:** a surgically implanted electronic device, which receives an acoustic signal from an external speech processor and converts it to an electrical signal to stimulate the cochlea

**Communication Access Realtime Translation (CART):** Also called open – captioning or real time stenography. A captioner/transcriptionist uses a stenography machine, a computer and software to display everything that is being said, word for word. The text is displayed on a computer, television or projection screen. Services can be provided onsite or remote where the captioner is offsite and the text appears on the computer or screen at the student’s location

**Conductive hearing loss:** hearing loss caused by a problem in the outer or middle ear resulting in a reduction in the sound energy being conducted to the inner ear

**Congenital hearing loss:** a hearing loss that is present at birth

**Cued Speech:** is a visual representation of a spoken language using handshapes and hand placements in combination with natural mouth movements of speech

**Deaf:** (1) hearing levels within the severe to profound range bilaterally (2) a cultural, linguistic term that means the person’s communication mode is visually based (e.g. ASL); vision is often the major channel for receiving information

**(NOTE)** In 2017, the National Deaf Center recognizes that for many individuals, identity is fluid and can change over time or with setting. NDC has chosen to use one term, deaf, with the goal of recognizing experiences that are shared by all members of various diverse communities while also honoring individual differences. The all-inclusive term “deaf” includes people who may identify as Deaf, deaf, deafblind, deaf disabled, hard of hearing, late-deafened and hearing impaired

**Deaf-Blind:** varying degrees of both hearing and vision loss; students should be reported to the Indiana Deaf-Blind Registry for additional services as this combination of losses limits access to auditory and visual information and creates unique challenges for communication and education
**Deaf Community**: the community of people whose primary mode of communication is American Sign Language and who share a common identity and culture

**Decibel (dB)**: the unit of measurement for the loudness of sound; the higher the dB, the louder the sound

**Degree of hearing loss**: refers to the severity of the hearing levels. Seven categories are typically used:
- Normal range = -10 to 15 dB
- Slight Loss/Minimal loss = 16 to 25 dB
- Mild Loss = 26 to 40 dB
- Moderate loss = 41 to 55 dB
- Moderate/severe loss = 56 to 70 dB
- Severe loss = 71 to 90 dB
- Profound loss = 91 dB or more ([www.ASHA.org](http://www.ASHA.org))

**DM system**: an assistive listening device that consists of a transmitter and receiver(s); the speaker’s voice is transmitted using a digitally modulated (DM) signal to an electronic receiver worn by the listener or a speaker placed near the listener. The system reduces the negative effects of background noise, reverberation, and distance from the person wearing the transmitter.

**Earmold**: a custom-made ear piece that fits into the outer ear to transmit sound from a behind-the-ear hearing aid; earmolds may also be used to improve retention of other ear level devices

**Fingerspelling**: representation of the alphabet by finger positions in order to spell out words

**Fluctuating hearing loss**: hearing loss characterized by hearing levels that are variable over time

**FM system**: an assistive listening device that consists of a transmitter and receiver(s); the speaker’s voice is transmitted using a frequency modulated (FM) signal to an electronic receiver worn by the listener or a speaker placed near the listener. The system reduces the negative effects of background noise, reverberation, and distance from the person wearing the transmitter.

**Frequency**: the number of vibrations per second of a sound. Frequency, expressed in Hertz (Hz), determines the pitch of sound

**Gesture/Pantomime**: movement of any part of the body to express, emphasize or act out an idea, an emotion or a function

**Hard of Hearing**: range of hearing levels outside of the normal hearing range

**Hearing Assistance Technology (HAT)**: a variety of technologies that improve listening in a variety of situations

**Hearing screening**: Procedures designed to identify children in need of diagnostic hearing evaluations

**Intensity**: the loudness of a sound measured in decibels (dB)

**Interpreter**: a trained person who facilitates communication between two people who communicate using two different languages (**Oral interpreter**: a trained person who inaudibly mouths verbal communication to enhance understanding for individuals who read lips)
**Intervener:** a trained person who facilitates access to environmental information that is usually gained through hearing and vision but is unavailable or incomplete to an individual who is deaf-blind

**Language:** a formal method of receptive, expressive and pragmatic communication, including spoken, signed, and printed

**Language Facilitator:** a special education assistant who adjusts academic and social language to the level of the student for improved access and understanding in the educational environment

**Listening and Spoken Language:** a communication approach that encourages children to make use of the hearing they have (i.e., residual hearing) through technology (e.g., hearing aids, cochlear implants, FM systems) and educational intervention. In this approach, children are taught to listen and speak through the application of techniques, strategies and procedures that promote optimal acquisition of spoken language through listening

**Mixed hearing loss:** a combination of characteristics associated with both a conductive loss and a sensorineural loss

**Otitis media:** An infection caused by a virus or bacteria where fluid is often present in the space behind the eardrum (middle ear)

**Otolaryngologist (ENT):** physician specialized in medical conditions of the ear, nose and throat

**Otologist:** a physician who specializes in medical conditions of the ear

**Remote Microphone (RM):** Hearing assistance technology consisting of a microphone worn by a speaker whose voice is transmitted wirelessly to a listener’s personal hearing device (i.e. Bluetooth)

**Residual hearing:** the remaining amount of measurable hearing in an ear with hearing loss

**Reverberation:** prolongation (echo) of a sound after the sound source has ceased

**Sensorineural hearing loss:** a hearing loss that is caused by reduced function or abnormalities in the cochlea and/or auditory nerve

**Signal-to-noise ratio:** the intensity of the speech signal as compared to the intensity of the background noise

**Single-sided deafness (SSD):** A complete loss of hearing in one ear and normal hearing sensitivity in the opposite ear

**Soundfield System:** see CADS definition

**Speechreading:** the use of visual cues that accompany verbal communication to understand an intended message

**Speech perception:** the ability to recognize and understand speech stimuli

**Speech intelligibility:** the ability for one’s speech to be understood by others

**Speech recognition:** the ability to correctly identify words, phrases or sentences

**Symmetrical hearing loss:** Similar degree and/or configuration of hearing loss in each ear

**Transcriptionist:** the person who provides real-time captioning

**Transition:** A period of time during which 1) a child moves from Part C (Early Intervention) to Part B (school-aged) services 2) coordinated activities and services to prepare a student for school exit that begins the school year in which the child turns 14

**Unilateral:** refers to one side (e.g. unilateral hearing loss)

### Deaf/Hard of Hearing Eligibility Checklist

**Criteria Met?**

<table>
<thead>
<tr>
<th>Yes/No</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>1. With or without amplification adversely affects the student’s:</td>
</tr>
<tr>
<td></td>
<td>• Ability to use hearing for developing language and learning</td>
</tr>
<tr>
<td></td>
<td>• Educational performance</td>
</tr>
<tr>
<td></td>
<td>• Developmental progress</td>
</tr>
<tr>
<td></td>
<td>2. The hearing levels may be:</td>
</tr>
<tr>
<td></td>
<td>• Permanent or fluctuating</td>
</tr>
<tr>
<td></td>
<td>• Mild to Profound</td>
</tr>
<tr>
<td></td>
<td>• Unilateral or bilateral</td>
</tr>
<tr>
<td></td>
<td>3. Students who are deaf or hard of hearing may use spoken language or sign language or a combination of spoken language and signed systems</td>
</tr>
<tr>
<td></td>
<td>I. An assessment of current academic achievement has been completed</td>
</tr>
<tr>
<td></td>
<td>II. Assessments of functional skills or adaptive behavior across various environments from multiple sources have been completed</td>
</tr>
<tr>
<td></td>
<td>III. As assessment of communication conducted in the language or system utilized for the student’s instruction or the student’s preferred mode of communication that assesses the student’s receptive and expressive language skills</td>
</tr>
<tr>
<td></td>
<td>IV. A social and developmental history has been completed that may include, but is not limited to:</td>
</tr>
<tr>
<td></td>
<td>• Communication Skills</td>
</tr>
<tr>
<td></td>
<td>• Social Interaction Skills</td>
</tr>
<tr>
<td></td>
<td>• Motor Skills</td>
</tr>
<tr>
<td></td>
<td>• Responses to sensory experiences</td>
</tr>
<tr>
<td></td>
<td>• Relevant family and environmental information</td>
</tr>
<tr>

APPENDIX IV: CONSIDERATION OF SPECIAL FACTORS WORKSHEET

CONSIDERATION OF SPECIAL FACTORS WHEN AN INDIANA STUDENT IS DEAF OR HARD OF HEARING

NOTE. The intent of this form is to guide discussion among all members of the team who review a student’s needs based on language and communication skills and access. This result of this thoughtful discussion about the student’s communication access, social, and instructional needs will be documented and utilized in determining the current performance levels as well as other components of the IEP, including appropriate specially designed instruction and IEP goals, and will, as appropriate, result in any necessary action plan to address the student’s needs.

Indiana State Board of Education Special Education Rules Title 511 Article 7
511 IAC 7.42.6 Developing an Individualized Education Program
(c) The Case Conference Committee must also consider the following special factors when applicable:
(A) Language and communication needs;
(B) Opportunities for direct communications with peers and professional personnel in the student’s language and communication mode;
(C) Academic level; and
(D) Full range of needs, including opportunities for direct instruction in the student’s language and communication mode.

Date of this Form: ___________________________ Completed By: ___________________________

Child’s Name: ___________________________ Grade: ___________________________

Language(s) Used in the Home Environment (i.e., English, ASL, Spanish, etc.): ___________________________

The IEP team has considered each item below:

(A) The child’s language and communication needs;

The child primarily comprehends/uses one or more of the following forms of communication in the various contexts:

Expressive/Receptive Communication Continuum
(indicate ‘E’ for expressive AND ‘R’ for receptive as well as add notes to clarify if needed, some boxes may be left blank)

<table>
<thead>
<tr>
<th>Communication Type</th>
<th>In the home</th>
<th>In the classroom or childcare setting</th>
<th>In social situations</th>
</tr>
</thead>
<tbody>
<tr>
<td>Accesses information visually via ASL/signs</td>
<td>With Parent/siblings</td>
<td>With teacher/provider</td>
<td>With peers</td>
</tr>
<tr>
<td>Accesses most information visually via ASL/signs obtains some benefit from auditory information</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Equally able to access information visually via ASL/signs or through listening</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Accesses most information through spoken language; sometimes needs visual support via signs/visual cues for clarification</td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Accesses all information via spoken language</td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

NOTE: Identify all necessary assistive devices and environmental accommodations necessary to ensure access to and participation in the general education curriculum or required by the student to benefit from necessary specialized instruction.

What assistive technology devices are used by the child? (Hearing aids, cochlear implant, FM system, captioning, Video Phone, etc.)

- What age did child receive hearing aids?
- Cochlear implant?
- How consistently are current devices used (include hours per day)?

What is needed to increase the proficiency of parents and family members in communicating with the child?
(B) Opportunities for direct* communications with peers and professional personnel in the child’s language and communication mode:

*Direct language/communication/instruction occurs person to person, not through an additional source (e.g., education interpreter, classroom note-taker, etc.).

The IEP team has considered opportunities for direct communication which may be provided by the school and/or family:

Opportunities for direct* instruction.

☐ Yes     ☐ No     ☐ Not sure

Opportunities for direct* communication with peers.

☐ Yes     ☐ No     ☐ Not sure

Opportunities for direct* communication with professional staff and other school/childcare personnel.

☐ Yes     ☐ No     ☐ Not sure

List strategies for increasing opportunities for direct communication/instruction as needed.

*Do you have access to Deaf/Hard of Hearing adults and/or peers in your area?

☐ Yes     ☐ No     ☐ Not sure

(C) Academic level;

NOTE: Considering the mode or modes of communication used by the student, identify all supports needed by this student to participate in the general curriculum and extracurricular activities and benefit from other school services available to all students; this information assists with the development of specialized instruction as well as appropriate accommodations and modifications.

Does the child have the communication and language necessary to acquire the age/grade-level academic skills and concepts included in the general education curriculum?

☐ Yes: What supports have been provided to this child previously or currently?

☐ No: What strategies are needed to increase the child’s proficiency in language and communication to acquire age/grade-level academic skills and concepts?

Does the child have the communication and language necessary to acquire daily living/functional living skills?

☐ Yes: What supports have been provided to this child previously or currently?

☐ No: What strategies are needed to increase the child’s proficiency in communication and language development to acquire daily living/functional living skills?

(D) Full range of needs,

The IEP team has considered the full range of needs, which is defined as encompassing academic, language and social needs involving opportunities for direct instruction in the student’s language and communication mode.

☐ Yes     ☐ No     ☐ Not sure

Deaf/Hard of Hearing Evaluation Delegation Sheet
(Indiana Special Education Rules Article 7)

Student: ___________________ DOB: __________ STN: ___________________

Date consent received: ______________ Date report due: __________ Conference scheduled: __________

Send your portion of the report to: __________________________ E-mail: __________________________

Personnel entering report into IEP: __________________________ E-mail: __________________________

[NOTE: The Center is available to conduct a comprehensive assessment in collaboration with the local school system to best meet your student’s needs.]

| I. An assessment of current academic achievement has been completed |
| School District (Date/Initials) | Center (Date/Initials) |
| Observation by: |

| II. Assessments of functional skills or adaptive behavior across various environments from multiple sources have been completed |
| Classroom Observation: Including, but not limited to a functional listening evaluation, access to instruction, AT evaluation, etc. |

| III. An assessment of communication conducted in the language or system utilized for the student’s instruction or the student’s preferred mode of communication that assesses the student’s receptive and expressive language skills; completed by a qualified language specialist such as an SLP |

| IV. A social and developmental history has been completed that may include, but is not limited to: |
| Communication skills |
| Social interaction skills |
| Motor skills |
| Responses to sensory experiences |
| Relevant family and environmental information |

| V. A written report from an educational or clinical audiologist, otologist or otolaryngologist is provided with information regarding the etiology of the hearing levels and the student’s potential requirement for amplification if appropriate |

| VI. Any other assessments and information are provided that were collected prior to referral or during the educational evaluation, necessary to: |
| Determine eligibility for special education and related services and |
| Inform the student’s case conference committee of the student’s special education and related service needs |

</table>

*when compared to the student's language level

## Teaching Strategies & Style Observed

- Repeats responses of other students
- Redundant teaching style
- Uses repetition
- Multi-sensory teaching approach
- Uses paraphrasing
- Some lecture
- Identifies speakers in discussions
- Mostly lecture
- Checks for understanding of verbal directions
- Hands on opportunities
- Provides visual and written information
- Little hands on opportunities
- Stands close to student to aid in audition
- Allows other students to use FM system
- Moves position to be eye to eye
- Center-based themes for younger
- Gains attention before speaking
- Use of pictures to aid concept development

Comments on teaching strategies:

## Student Characteristics

<table>
<thead>
<tr>
<th>Participation:</th>
<th>volunteers information</th>
<th>answers direct questions</th>
<th>rarely participates</th>
</tr>
</thead>
<tbody>
<tr>
<td>Attention to speaker:</td>
<td>always</td>
<td>usually</td>
<td>rarely</td>
</tr>
<tr>
<td>Speech:</td>
<td>intelligible</td>
<td>Audible</td>
<td>Other:</td>
</tr>
<tr>
<td>Behavior:</td>
<td>Appropriate</td>
<td>Withdrawn</td>
<td>Very physical</td>
</tr>
</tbody>
</table>

Check all that apply:

- Wears amplification consistently
- Does not wear amplification consistently
- Demonstrates comprehension of verbal directions
- Requests clarification/repetition of direction
- Uses vision to supplement auditory cues
- Uses visual cues inappropriately
- Turns around to follow comments from classmates
- Completes assignments independently
- Follows directions: 1st time 2nd time
- Interacts with peers
- Seated near speaker away from noise source
- Other: ____________
