On April 26, 2010, Duke Energy Indiana, Inc. ("Petitioner" or "Duke Energy Indiana") filed a Petition with the Indiana Utility Regulatory Commission ("Commission") seeking to reflect additional values of qualified pollution control property ("QPCP") in its rates and charges for electric service, through Standard Contract Rider No. 62; seeking approval of Petitioner’s proposed methodology to apportion revenue from the new demand charge applied to Nucor Steel-Indiana’s interruptible load consistent with the Commission’s February 24, 2010 Order in Cause No. 43754 ("Nucor Contract Order"); seeking approval of an ongoing review progress report concerning certain clean coal technology projects; seeking approval of updated environmental projects, cost estimates and in-service dates for environmental projects; seeking approval of an adjustment to its rates through its Clean Coal Operating Cost Revenue Adjustment mechanism, Standard Contract Rider No. 71; and seeking approval of an adjustment to its rates through its sulfur dioxide ("SO₂"), nitrogen oxide ("NOₓ") and mercury ("Hg") Emission Allowance Adjustment, Standard Contract Rider No. 63.
Pursuant to notice published as required by law, proof of which was incorporated into the record, an Evidentiary Hearing was held in this case on July 22, 2010 at 9:30 a.m.in Room 224, National City Center, 101 West Washington Street, Indianapolis, Indiana. Petitioner and the Indiana Office of Utility Consumer Counselor ("OUCC") appeared at the hearing. During the hearing, Petitioner presented its case-in-chief, consisting of the testimony and exhibits of Mr. John J. Roebel, Ms. Diana L. Douglas, Mr. John P. Griffith, Mr. Edward O. Abbott, and Mr. Kent K. Freeman. The OUCC presented the testimony of Mr. Wes R. Blakley and Ms. Cynthia Armstrong.

Based on the applicable law and the evidence herein and being duly advised, the Commission now finds as follows:

1. **Notice and Jurisdiction.** Due, legal and timely notice of the Evidentiary Hearing in this Cause was given and published by the Commission as required by law. Petitioner is a public utility within the meaning of the Public Service Commission Act, as amended, Ind. Code § 8-1-2-1, and is subject to the jurisdiction of the Commission, in the manner and to the extent provided by the laws of the State of Indiana. Petitioner requests relief pursuant to Ind. Code § 8-1-2-6.6, Ind. Code § 8-1-2-6.8, Ind. Code § 8-1-2-42(a), Ind. Code § 8-1-8.7-1 et seq., Ind. Code § 8-1-8.8-1 et seq., and 170 IAC 4-6-1 et seq. The Commission has jurisdiction over Petitioner and the subject matter of this proceeding.

2. **Petitioner’s Characteristics.** Petitioner is a public utility organized and existing under the laws of the State of Indiana, and has its principal office at 1000 East Main Street, Plainfield, Indiana 46168. It is engaged in rendering electric utility service in the State of Indiana and owns, operates, manages, and controls, among other things, plant and equipment within the State of Indiana used for the production, transmission, delivery and furnishing of such electric service to the public.

3. **Petitioner’s Electric Generating Properties.** As of the date of the Petition in this Cause, Petitioner’s electric generating properties consisted of: (1) steam capacity located at five stations comprised of nineteen coal-fired generating units supplied by nineteen coal-fired boilers1 and one oil-fired boiler; (2) combined cycle capacity comprised of three natural gas-fired Combustion Turbines ("CT") and two steam turbine-generators; (3) a run-of-river hydroelectric generation facility comprised of three units; (4) peaking capacity consisting of seven oil-fired diesels located at two stations, eight oil-fired CT units located at two stations, and sixteen natural gas-fired CTs, one of which has oil back-up.

4. **Background to this Proceeding.**

   a. **NOx SIP Call.** The federal NOx State Implementation Plan ("SIP") Call and related Indiana NOx SIP Call required that Indiana reduce its NOx emissions during the ozone season of May 1 through September 30 to a level of 0.15 lb/mmBtu by May 31, 2004. The reductions in NOx emissions in Indiana came primarily from industrial and utility sources.

---

1 Pursuant to the New Source Review ("NSR") remedy order ("NSR Order"), issued on May 29, 2009, by the U.S. District Court for the Southern District of Indiana, Wabash River Units 2, 3, and 5 were shut down, effective September 30, 2009, pending a decision on appeal of the NSR Order. Therefore, although Petitioner’s generating properties consist of nineteen coal-fired boilers, only sixteen of those coal-fired boilers are in service at this time.
On July 3, 2002, the Commission issued an order in consolidated Cause Nos. 41744 S1 and 42061, wherein, among other things, we: found that Petitioner’s NO\textsubscript{x} Compliance Plan was reasonable; issued a certificate of public convenience and necessity (“CPCN”) for the use of clean coal technology; approved the use of Petitioner’s proposed QPCP; approved Petitioner’s updated cost estimates related to its NO\textsubscript{x} Compliance Plan equipment; and approved a Standard Contract Rider No. 62 that allows for construction work in progress (“CWIP”) ratemaking treatment for Petitioner’s QPCP. We found that Petitioner may update the value of its QPCP for CWIP ratemaking purposes no more often than every six months. Additionally, we found that, under our ongoing review rules, Petitioner should submit, at least annually, a progress report detailing any revisions in its cost estimates or in the planned construction of its clean coal technology projects.

b. **CAIR and CAMR Compliance Requirements.** In January 2004, the EPA published two new significant proposed emission reduction requirements: (1) the interstate air quality rule (later renamed the Clean Air Interstate Rule or “CAIR”); and (2) the utility mercury reductions rule (later renamed the Clean Air Mercury Rule or “CAMR”). EPA finalized CAIR on May 12, 2005 (70 Fed. Reg. 25162) and CAMR on March 29, and May 18, 2005 (70 Fed. Reg. 15994 and 70 Fed. Reg. 28606).

CAIR requires 29 states (plus the District of Columbia, and including Indiana) to adopt plans to dramatically reduce SO\textsubscript{2} and NO\textsubscript{x} emissions from power plants and other sources, to facilitate compliance with the 8-hour ozone and fine particulate matter (“PM 2.5”) national ambient air quality standards (“NAAQS”). CAMR regulates mercury emissions from power plants for all states. The final CAIR requires major SO\textsubscript{2} and NO\textsubscript{x} reductions in two stages: (1) a cap of 3.6 million SO\textsubscript{2} tons by 2010, and a cap of 2.5 million SO\textsubscript{2} tons by 2015 (for a total SO\textsubscript{2} decrease of approximately 65%); and (2) a cap of 1.5 million NO\textsubscript{x} tons by 2009, and a cap of 1.3 million tons of NO\textsubscript{x} by 2015 (for a total NO\textsubscript{x} reduction of approximately 70%). CAIR also establishes both an annual NO\textsubscript{x} trading program and a seasonal NO\textsubscript{x} trading program (similar to and replacing the NO\textsubscript{x} SIP Call requirements), effective in 2009. CAIR also prescribes that, instead of SO\textsubscript{2} emission allowances continuing to allow the holder to emit one ton of SO\textsubscript{2}, post-2010 vintage SO\textsubscript{2} emission allowances will only allow the holders to emit one-half to one-third as much per emission allowance. The Indiana Air Pollution Control Board adopted the final CAIR on November 1, 2006.\(^2\)

The final CAMR provides regulatory authority for a mercury cap and trade program, with a mercury cap for 2010 set at 38 tons, and 15 tons in 2018. The Indiana Air Pollution Control Board adopted the CAMR on October 3, 2007.\(^3\)

---

\(^2\) On July 11, 2008, the U.S. Court of Appeals for the District of Columbia in *State of North Carolina v. Environmental Protection Agency* issued an opinion vacating and remanding CAIR; however, parties to the litigation requested rehearing of aspects of the Court’s decision, including the vacatur of the rules. On December 23, 2008, the Court granted rehearing only to the extent that it remanded the rules to EPA without vacating them. The practical effect of this ruling is that CAIR remains in place until EPA issues a new rule in accordance with the July 11, 2008 decision (“CAIR Decision”).

On May 24, 2006, the Commission issued an order in consolidated Cause Nos. 42622 and 42718 approving a Settlement Agreement among Petitioner, the OUCC, and the PSI Industrial Group wherein, among other things, we: found that the Settlement Agreement was in the public interest; approved Petitioner’s Phase 1 CAIR/CAMR Compliance Plan; found that the proposed scrubber, scrubber upgrade and baghouse projects constitute clean coal technology, clean coal and energy projects and qualified pollution control property; issued a CPCN for the Phase 1 CAIR/CAMR Compliance Plan projects; approved Petitioner’s request for ongoing review of the Phase 1 CAIR/CAMR Compliance Plan projects; approved Petitioner’s cost estimates for the Phase 1 CAIR/CAMR Compliance Plan projects; approved the use of accelerated (20-year) depreciation for the Phase 1 CAIR/CAMR Compliance Plan projects as provided in the Settlement Agreement; and approved the timely recovery of costs associated with Petitioner’s CAIR/CAMR Compliance Plan.

c. Emission Allowance (“EA”) Adjustment. In Cause Nos. 42411 and 42359 the Commission approved the recovery of NO\textsubscript{x} EA costs in Petitioner’s then existing SO\textsubscript{2} Emission Allowance Adjustment mechanism. In Consolidated Cause Nos. 42622 and 42718, the Commission approved the inclusion of Mercury EA costs in this same mechanism. Petitioner has used the Commission’s 30-day filing process to implement these adjustments quarterly in accordance with the Settlement Agreement and Order in Cause No. 42411, but beginning with Cause No. 42061 ECR 10 elected to include future updates in these proceedings.

5. Relief Sought in this Proceeding. In this six-month update proceeding, Petitioner requests the authority to reflect additional values of QPCP, as of the date ending December 31, 2009, in its rates and charges for electric service. Petitioner also requests that the Commission approve Petitioner’s methodology to apportion revenue from the new demand charge applied to Nucor Steel-Indiana’s interruptible load consistent with the Nucor Contract Order. In addition, Petitioner requests approval of an ongoing review progress report concerning certain clean coal technology projects, approval of updated environmental projects, cost estimates and in-service dates for environmental projects, approval of an update and adjustment to Petitioner’s Clean Coal Operating Cost Revenue Adjustment Rider, and approval of an update and adjustment to Petitioner’s SO\textsubscript{2}, NO\textsubscript{x} and Hg Emission Allowance Adjustment Rider.

a. Clean Coal Technology Statute. Ind. Code § 8-1-8.7-7 provides that an applicant for a certificate of clean coal technology may elect ongoing review of its construction and construction costs, in which case the utility must periodically submit progress reports and cost estimate revisions to the Commission.

b. CWIP Statute and Administrative Rules. 170 IAC 4-6-4 provides that the Commission shall approve the use of QPCP if it consists of one or more air pollution control devices, the devices meet applicable state or federal requirements, the devices are designed to accommodate the burning of coal from the geological formation known as the Illinois basin, and the estimated costs of construction and installation are reasonable. Once pollution control equipment is found to be QPCP, then the utility is allowed to add the value of the QPCP to the value of the utility’s property for ratemaking purposes. See 170 IAC 4-6-5; Ind. Code § 8-1-2-6.6, and 6.8. Per the Commission’s CWIP rules, CWIP ratemaking treatment is available for
QPCP that has been under construction for six months or longer, and a utility can update the amounts of its CWIP balances no more often than every six months. See 170 IAC 4-6-9, 4-6-18.

c. **Utility Generation and Clean Coal Technology Statute, Ind. Code § 8-1-8.8 (also referred to as “Senate Bill 29”).** Ind. Code § 8-1-8.8-11(a)(1) and (5) provide that “the commission shall encourage clean coal and energy projects by creating the following financial incentives for clean coal and energy projects, if the projects are found to be reasonable and necessary: (1) the timely recovery of costs incurred during construction and operation of projects described in section 2(1) or 2(2) of this chapter; . . . (5) other financial incentives the commission considers appropriate.” Ind. Code § 8-1-8.8-2(1)(B) defines “clean coal and energy projects” as “projects to provide advanced technologies that reduce regulated air emissions from existing energy generating plants that are fueled primarily by coal or gases from coal from the geologic formation known as the Illinois Basin, such as flue gas desulfurization and selective catalytic reduction equipment.”

d. **Emission Allowance Adjustment Authority.** Ind. Code § 8-1-2-42(a) contemplates and recognizes rate adjustments in accordance with tracking provisions approved by the Commission, specifically exempting such rate adjustments from Indiana’s “fifteen month rule.”

7. **Summary of Evidence.** Petitioner presented case-in-chief testimony and exhibits of Mr. John J. Roebel, Senior Vice President of Generation Support, Ms. Diana L. Douglas, Director, Rates, Mr. John P. Griffith, Director, Portfolio Optimization, Fuel and Emissions, Mr. Edward O. Abbott, Consulting Engineer, Performance & Measures, and Mr. Kent K. Freeman, Rate Strategy and Projects Director, Rates Indiana.

Mr. Roebel stated that Petitioner is constructing its NO\textsubscript{x} Compliance Plan projects in order to meet federal and state NO\textsubscript{x} SIP Call regulations that took effect in May 2004 and is constructing its CAIR/CAMR Projects in order to comply with those federal requirements. Mr. Roebel explained that Petitioner’s NO\textsubscript{x} Compliance Plan is an ongoing process; however he indicated that the current NO\textsubscript{x} Compliance Plan is not significantly different from the plan presented in 42061 ECR14, the most recent six-month update case. Thus, the following projects are currently included in Petitioner’s current active NO\textsubscript{x} Compliance Plan for which Petitioner is seeking CWIP and Senate Bill 29 recovery:

<table>
<thead>
<tr>
<th>Gallagher Station</th>
<th>Cayuga Station</th>
</tr>
</thead>
<tbody>
<tr>
<td>Boiler Optimization Units 1-4</td>
<td>Boiler Optimization Units 1-2</td>
</tr>
<tr>
<td>Low NO\textsubscript{x} Burners &amp; Fuel Flow Monitoring Unit 4</td>
<td>Electrostatic Precipitator Units 1-2</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Gibson Station</th>
<th>Wabash River Station</th>
</tr>
</thead>
<tbody>
<tr>
<td>Selective Catalytic Reduction (“SCRs”) Units 1-5, including Injection System</td>
<td>Boiler Optimization Units 2-6</td>
</tr>
<tr>
<td>Boiler Optimization Units 1-5</td>
<td>Low NO\textsubscript{x} Burners Units 2, 3, 4, 5, and 6 (Units 4 and 6 Low NO\textsubscript{x} Burner recovery sought and approved for Senate Bill 29 only)</td>
</tr>
<tr>
<td>SCR catalyst beds Units 1-5</td>
<td>Units 4 and 6 Low NO\textsubscript{x} Burner recovery approved for Senate Bill 29 only)</td>
</tr>
</tbody>
</table>
Additionally, Mr. Roebel testified the estimated costs of the NO\textsubscript{x} Compliance Plan have remained reasonably accurate, but as with any multi-year plan there are ongoing impacts and refinements that could potentially affect costs. He further added that with the Commission’s approval, for CWIP ratemaking purposes, the Petitioner proposes to include the actual costs of the projects once they are known, whether higher or lower than the original estimates.

Mr. Roebel then testified that the NO\textsubscript{x} SIP Call Compliance Plan cost estimates that were approved in previous ECR proceedings remain valid, taking into account the previously recorded adjustments. He stated that Petitioner’s estimated costs for its NO\textsubscript{x} Compliance Plan have decreased slightly, reflecting cost reductions for the catalyst bed change-outs planned through 2019.

Mr. Roebel testified that the only projects added to Petitioner’s CAIR/CAMR compliance plan since the Settlement Agreement in Cause Nos. 42622/42718 have been the addition of mercury emission monitors that were under construction or purchased by the time CAMR was vacated. Petitioner’s remaining mercury monitors in Indiana are being stored pending further actions by the State of Indiana and/or the EPA related to mercury regulations. Thus, the following projects are currently included in Petitioner’s current Phase 1 CAIR/CAMR Compliance Plan for which Petitioner is seeking CWIP and Senate Bill 29 recovery:

<table>
<thead>
<tr>
<th>Gallagher Station</th>

Mr. Roebel discussed Petitioner’s updated cost estimates for the CAIR/CAMR Compliance Plan projects. He explained that as with any multi-year plan there are incremental changes from ongoing impact and refinements as a normal part of an ongoing construction program. He added that Petitioner expects these costs to continue to be refined to a small degree. Overall, he stated, Petitioner’s estimated costs for its CAIR/CAMR Compliance Plan have decreased slightly.

Mr. Roebel indicated that Petitioner proposed, for CWIP ratemaking purposes, to include only the actual costs of the projects once they become known, whether those costs are higher or
lower than the original estimate on any specific project. He stated he believed the current cost estimates of Petitioner’s CAIR/CAMR Compliance Plan are reasonable.

Mr. Roebel next provided some background on the NSR lawsuit brought by the U.S. Department of Justice against Duke Energy Indiana in U.S. District Court. He explained that in May 2008 a jury verdict was issued in favor of Duke Energy Indiana on four of the eight remaining projects and that the four projects for which the jury found liability were the projects on Wabash River Units 2, 3, and 5. He stated that subsequently, the Court ordered a new trial on the four projects for which the jury had found in favor of Duke Energy Indiana. As a result of this new trial, in May 2009, a jury found liability on the Gallagher Units 1 and 3 pulverizer projects. He testified that on May 29, 2009, the Court ordered the shutdown of Wabash River Units 2, 3, and 5 by September 30, 2009 and that until such time as the units were shutdown, Petitioner was required to run those units at a rate not to exceed the pre-project baseline emissions. The Court also ordered Petitioner to permanently surrender SO\textsubscript{2} EAs for the period May 22, 2008, the date of the jury verdict, through the date of shutdown of the units on September 30, 2009.4 Mr. Roebel stated that on September 30, 2009, Petitioner did a reserve shutdown of these units, meaning that although the units are currently shutdown, the units are not permanently shutdown as the court’s decision is currently on appeal.5

Mr. Roebel testified that in December 2009, the parties filed a proposed settlement as to the Gallagher Units 1 and 3 pulverizer projects, which was approved by the Court on March 18, 2010 (“Consent Decree”). He explained that in the Consent Decree, Petitioner agreed to retire or repower Gallagher Units 1 and 3 with natural gas. Petitioner must decide whether to retire or repower the units by January 1, 2012. He stated that if Petitioner decides to repower these units, the conversion must occur by December 31, 2012. If Petitioner elects to retire these units, it must do so by February 1, 2012. Beginning January 30, 2011, Petitioner agreed to operate those units so that each unit achieves and maintains a 30-day rolling average emission rate for SO\textsubscript{2} of no greater than 1.70 lb/mmBTU. Petitioner also agreed to surrender SO\textsubscript{2} allowances during the conversion period. Mr. Roebel testified that although pulverizers were installed on all four Gallagher Units in the 1990s, the government only included in the NSR lawsuit the pulverizer projects at Gallagher Units 1 and 3. He stated that, because the jury found liability for the pulverizer projects at Units 1 and 3, Petitioner believed it was likely that the government would next file claims on the Units 2 and 4 pulverizer upgrades, given that they were identical to those at Units 1 and 3. He testified that in order to resolve the possibility of further litigation over these issues and to mitigate the risk of a shutdown of Gallagher Units 2 and 4, Petitioner thought it prudent, after conducting an economic analysis, to agree to include Units 2 and 4 in the Consent Decree in return for a commitment from the government not to file claims on those units. Mr. Roebel testified that in the Consent Decree, Petitioner agreed to install and continuously operate a Dry Sorbent Injection System on Units 2 and 4 by January 1, 2011, and thereafter achieve and maintain a 30-day rolling average rate for SO\textsubscript{2} of no greater than 0.800 lb/mmBTU on these units. He explained that also under the Consent Decree, Petitioner agreed to make a $6.25 million contribution for other environmental projects and to pay civil penalties of

---

4 Petitioner was ordered to surrender an amount equal to the SO\textsubscript{2} emissions from Wabash River Units 2, 3 and 5.  
5 On September 21, 2009, Cinergy filed its Notice of Appeal to the Seventh Circuit. All briefing is currently scheduled to conclude in May 2010 with an anticipated decision by the end of 2010.
$1.75 million. Mr. Roebel testified that Petitioner intends to address cost recovery issues associated with the NSR litigation in other proceedings before the Commission.

Ms. Douglas described the proposed implementation of CWIP ratemaking treatment via Duke Energy Indiana Standard Contract Rider No. 62 (“Rider 62”), and provided the schedules and information required by 170 IAC 4-6-12 (calculated consistent with the Commission’s CWIP rules). Specifically, Ms. Douglas provided information establishing the incremental value of QPCP investment through December 31, 2009, for which Petitioner is seeking recovery; showed the computation of the jurisdictional revenue requirement associated with that investment; and determined the allocation of the jurisdictional revenue requirement to various retail customer groups. Ms. Douglas explained, that consistent with the Commission’s Order in consolidated Cause Nos. 41744 S1 and 42061 and subsequent related Orders, the QPCP projects will be deemed to be under construction, and Petitioner will continue to receive revenues through Rider 62, until the Commission determines that these projects are used and useful in a proceeding that involves the establishment or investigation of Petitioner’s base rates and charges, or until these projects no longer satisfy the other requirements of the Commission’s CWIP ratemaking rules.

Ms. Douglas also explained that Petitioner pledged to return the difference between the property tax expense approved in Cause No. 42359 and actual jurisdictional property tax expense, if lower. Ms. Douglas testified that based on this commitment, there is a net jurisdictional amount to be refunded to retail customers of $2,948,000.

Ms. Douglas testified regarding the residential customer impact of the proposed CWIP ratemaking treatment. Ms. Douglas stated that the monthly bill of a typical residential customer using 1,000 kilowatt-hours would increase by approximately twenty-four cents, or 0.3%, when compared to the last approved factor.

Ms. Douglas also explained and supported Petitioner’s proposed adjustments to Standard Contract Rider No. 71—Clean Coal Operating Cost Revenue Adjustment (“Rider 71”) covering the reconciliation of depreciation and operation and maintenance expenses billed versus depreciation and operation and maintenance expenses actually incurred for the six months ended December 31, 2009, and the estimated costs for the period January through June 2010. Ms. Douglas explained that, in accordance with the Commission’s Order approving the Settlement Agreement in consolidated Cause Nos. 42622 and 42718, Petitioner has credited customers with a reduction in operation and maintenance expense related to removal of the electrostatic precipitators at Gallagher Station. In addition, Ms. Douglas explained that a credit for the amount of Nucor demand revenues apportioned to Riders 61, 62, and 71 in the amount of $490,715, representing the apportioned amount of 2010 demand revenues applicable to Nucor’s interruptible load, was included in the development of the revenue requirement used in developing the Clean Coal Operating Cost Revenue Adjustment Factors. She further explained that Petitioner planned to include credits representing six months’ worth of apportioned Nucor demand revenues in each Rider 71 rate adjustment in future ECR proceedings until such time as Nucor demand revenues have been included in new base rates approved by the Commission in Petitioner’s next retail base rate case. Ms. Douglas indicated that residential rates under Rider No. 71 would increase by approximately fifty-two cents, or 0.7% when compared to the last approved factor.
Finally, Ms. Douglas explained and supported Petitioner’s proposed adjustments to Standard Contract Rider No. 63 (“Rider 63”), Petitioner’s SO₂, NOₓ and Hg Emission Allowance Adjustment Rider covering the reconciliation of SO₂ and NOₓ emission allowance expenses, net of the impact of sales of native load emission allowances, billed to retail jurisdictional customers versus the expenses net of sales actually incurred for the six months ended February 28, 2010, and the estimated NOₓ and SO₂ EA costs for the period July through December 2010. Ms. Douglas testified that realized gains from the sale of NOₓ emission allowances of approximately $2.7 million were booked in September 2009 through February 2010 and included in the development of the factor. Ms. Douglas stated that no estimates were included of EA sales during the projected period. Ms. Douglas testified that the incorrect classification of the purchase of 82 NOₓ allowances noted in 42061 ECR14 has been corrected and properly adjusted. Ms. Douglas indicated that residential rates under Rider 63 would decrease by approximately seventeen cents, or 0.2% when compared to the last approved factor.

Ms. Douglas concluded that the combined impact of the proposed factors for Standard Contract Riders 62, 63, and 71 for a typical residential customer using 1000 kWh would be an increase of $0.58 or 0.7%, when compared to the last approved factors.

Mr. Griffith discussed the CAIR Decision and stated that immediately after the Court vacated and remanded CAIR, the SO₂ and NOₓ emission allowance markets became much less liquid, while the seasonal NOₓ market was not as affected because a number of market participants still needed to use the market to prepare for 2008 compliance. He noted that since the Court’s remand of CAIR, after a brief initial price increase, EA prices have decreased steadily during 2009 and in 2010.

Mr. Griffith discussed that under CAIR there were some SO₂ compliance issues on the horizon, namely effective with vintage 2010 SO₂ EAs. Two EAs of vintage 2010 must be surrendered for each ton of SO₂ emitted in 2010 and is in effect for SO₂ EAs for vintages 2010 through 2014; but, the compliance ratio for SO₂ EAs of vintage 2009 or earlier does not change. He stated that this may contribute to increasing compliance costs.

Mr. Griffith testified that Duke Energy Indiana has been naturally short of SO₂ EAs and that the purchase of EAs has been Duke Energy Indiana’s primary form of compliance with Phase II of the Clean Air Act Amendments of 1990. However, with the construction of the additional scrubbers at Gibson and Cayuga as described above, Petitioner does not expect to be as short in the future.

Mr. Griffith described the production costing model that Duke Energy Indiana uses to determine whether it needs to purchase EAs or if it has a surplus and can sell some of its EA inventory. According to Mr. Griffith, the model recognizes and reflects the interrelationship and interaction of the various inputs, such as fuel costs, purchased power prices and EA prices, on the operation of Petitioner’s system. Mr. Griffith explained that Petitioner’s goal is to approach a balanced position for EAs plus a reserve for contingencies and that all transactions, either purchases or sales of EAs, are conducted at the then current market price and are based on the results of the model’s forecasts. Mr. Griffith also explained that there were a few sales of NOₓ EAs as opportunities arose and that Petitioner identified $2.7 million in realized gains from the
sale of NOx EAs. Mr. Griffith stated that the purchases and sales of native load EAs have been conducted in a reasonable manner and in an effort to provide energy to native load customers as economically as possible.

Mr. Griffith concluded his testimony by stating that the surrender of SO2 EAs for Wabash River Units 2, 3 and 5 as ordered by the Court in the NSR litigation resulted in Duke Energy Indiana surrendering 21,395 additional SO2 EAs for the native load portion of emissions from Wabash River Units 2, 3 and 5 from May 22, 2008 through September 30, 2009. He also stated that Duke Energy Indiana surrendered 7,299 additional SO2 EAs for the native load portion of emissions from Gallagher Units 1 and 3 from May 19, 2009 through December 31, 2009.

Mr. Edward O. Abbott testified that the projects having incremental operation and maintenance ("O&M") expenses associated with Petitioner’s NOx SIP Call Compliance Plan are the Gibson Station Units 1-5 SCRs, arsenic mitigation system, and the SO3 mitigation systems. He stated that these incremental costs will fluctuate based on demand and the generation level of the units.

Mr. Abbott also testified regarding the incremental O&M expenses associated with Petitioner’s CAIR/CAMR Compliance Plan. He explained that the projects associated with these expenses are the Cayuga Units 1 and 2 Flue Gas Desulfurization units ("FGDs"), Gibson Units 1-3 FGDs, Gibson Units 4 and 5 FGD upgrades. Mr. Abbott stated that the Gallagher Units 1-4 baghouses have not had any incremental costs, but will need to have the bags replaced periodically along with repairs to the baghouse structures and ash handling system as the units operate longer. He concluded that the incremental costs associated with these projects will also vary based on demand and the generation level of the units.

Mr. Freeman explained Petitioner’s proposed methodology to assign a portion of the revenue from the new demand charge for Nucor Corporation ("Nucor") applicable to its interruptible load to Petitioner’s following riders: (1) Standard Contract Rider No. 61 – Integrated Coal Gasification Combined Cycle Generating Facility Cost Recovery Adjustment (“Rider 61”), (2) Rider 62, and (3) Rider 71 (together the “Impacted Riders”). He stated that the assignment of revenues was in response to the Commission’s Nucor Contract Order. He stated Petitioner proposed to base the apportionment, in accordance with its exhibit, on the proportion of Nucor’s total firm service demand rate, including the Impacted Riders, that is attributable to the Impacted Riders. Petitioner proposed to credit retail customers with the amount of the new Nucor revenues applicable to retail customers for the Impacted Riders until Petitioner’s next general retail rate case, at which time these revenues would be reflected in the cost of service study and no longer credited through the Rider. Petitioner proposed to retain revenues not allocated to the Impacted Riders subject to a Commission order in Duke Energy Indiana’s next retail rate case. Petitioner proposed, for ease of administration, that the new demand charge revenues be credited through Rider 71 only, avoiding a separate adjustment in all three Impacted Riders, and resulting in a credit of $490,715 in this proceeding.

Mr. Wes R. Blakley, Senior Utility Analyst for the OUCC, testified that he had reviewed Petitioner’s filings in this Cause, as well as filings in the previous ECR, and nothing came to his attention that would indicate Petitioner’s calculation of estimated ECR adjustment factors for the relevant period are unreasonable. Mr. Blakley described Petitioner’s proposed apportionment of
revenue from the new Nucor demand charge to the Impacted Riders, resulting in a credit to customers in this Rider 71 filing of $490,715. Mr. Blakley testified that Petitioner's proposed methodology appears reasonable. Mr. Blakley also described Duke Energy Indiana’s proposed inclusion of the new Unamortized ITC-Advanced Coal IGCC investment tax credit (“ITC”) in its capital structure. He testified that the OUCC accepts Petitioner’s proposed treatment of this ITC, but reserves its right to continue investigating whether tax laws would permit different treatment that could be more beneficial to customers.

Ms. Cynthia M. Armstrong, Utility Analyst in the Electric Division for the OUCC, testified that she had reviewed Petitioner’s filings in this Cause, as well as filings in previous ECRs. She also conducted a field audit to review detailed accounting material for randomly selected dates of EA transactions and spoke to Duke Energy Indiana staff. Ms. Armstrong testified that Petitioner did not include in its calculation of EA adjustments the $6.5 million in EA costs attributable to the shutdown of Wabash River Units 2, 3 and 5 as a result of the NSR litigation, as agreed in Petitioner’s prior ECR proceeding. She stated that Petitioner plans to address cost recovery issues associated with the NSR litigation in other proceedings before the Commission. Ms. Armstrong also testified that an error made in the Petitioner’s recording of one EA transaction noted in Cause No. 42061 ECR14 has been fully adjusted and corrected. Ms. Armstrong testified that Petitioner’s calculation of EA adjustments was accurately applied and Petitioner’s EA trades were reasonable.

8. Commission Discussion and Findings. Based upon the evidence presented, the Commission finds that Petitioner’s request should be approved, except with respect to the Nucor demand charge revenue allocation as set forth further below. More specifically, the Commission finds that Petitioner should be authorized to reflect the additional values of QPCP in its rates and charges for electric service in accordance with Duke Energy Indiana’s Rider 62, as indicated in the direct testimony and exhibits of Ms. Diana L. Douglas.

Petitioner should be authorized to recover its operation and maintenance and depreciation expenses in accordance with Duke Energy Indiana’s Rider 71, as described in the testimony and exhibits of Ms. Douglas, including the reconciliation of such expenses for the period July 2009 through December 2009 and the estimated amounts for the period January 2010 through June 2010.

Petitioner should also be authorized to recover its SO₂ and NOₓ emission allowance expenses in accordance with Duke Energy Indiana’s Rider 63, as described in the direct testimony and exhibits of Ms. Douglas, including the reconciliation of such expenses for the period September 2009 through February 2010 and the estimated amounts for the period July 2010 through December 2010.

With respect to Petitioner’s proposed methodology to apportion revenue from the new demand charge applied to Nucor’s interruptible load, we agree with Petitioner that crediting the Impacted Riders in this single proceeding provides for reasonable efficiencies in administration and implementation of the credit. However, in calculating the credit, we find it more appropriate for Petitioner to utilize the proposed revenue requirements for Riders 62 and 71, rather than historic revenues from prior Rider 62 and 71 proceedings, as the same time period is covered as
the proposed credit. We also recognize that Petitioner will have to utilize a historic, or approved, revenue requirement for Rider 61 since a proposed revenue requirement would be unavailable. Consequently, we approve Petitioner’s proposed apportionment of Nucor new demand charge revenues applicable to interruptible load revenue, except that Petitioner shall use proposed revenue requirements for Riders 62 and 71.

Petitioner’s ongoing review progress report regarding its clean coal technology projects is hereby approved. We find that the updated construction cost estimates and updated in-service dates provided by Petitioner in this Cause are reasonable and are hereby approved as such. We note that in accordance with the clean coal technology certificate statute, if the Commission approves the construction and the costs of such equipment, that approval forecloses subsequent challenges to the inclusion of those costs in the utility’s rate base on the basis of excessive cost, inadequate quality control, or inability to employ the technology. See Ind. Code § 8-1-8.7-7(c).

9. **Confidential Information.** Petitioner filed a Motion for Protection of Confidential and Proprietary Information (“Motion”) with the Affidavits of Mr. John J. Roebel, Mr. John P. Griffith, and Mr. Kent K. Freeman on May 12, 2010. On May 14, 2010, Petitioner filed an inadvertently omitted page from the Affidavit of Mr. Kent Freeman. In its Motion, Petitioner demonstrated a need for confidential treatment for: (1) detailed cost estimates associated with its NOx SIP Call Compliance Plan and its CAIR/CAMR Compliance Plan; (2) emission allowance transaction prices; and (3) data relating to special contract customer pricing between Petitioner and Nucor. In a May 20, 2010, Docket Entry, the Commission preliminarily found that such information should be subject to confidential procedures. The Affidavits of Messrs. Roebel, Griffith, and Freeman indicate that such confidential information has actual or potential independent economic value for Petitioner and its ratepayers, the disclosure of the confidential information could provide Petitioner’s competitors and suppliers an unfair advantage, and Petitioner and its affiliates have taken all reasonable steps to protect the confidential information from disclosure. Accordingly, pursuant to Ind. Code § 5-14-3-4(a)(4), we find that the detailed cost estimates, emission allowance transaction prices, and special contract customer pricing constitute “trade secrets” and should be afforded confidential treatment. The Commission hereby orders that procedures should be taken so that such information is appropriately secured and made available only to selected members of the Commission staff who are under an obligation not to publicly disclose such information.

**IT IS THEREFORE ORDERED BY THE INDIANA UTILITY REGULATORY COMMISSION that:**

1. Petitioner’s proposed updated Rider 62, as reflected in the exhibits and testimony of Duke Energy Indiana, including QPCP values as of December 31, 2009, is hereby approved. The Rider 62 shall go into effect upon the filing of the final Rider with the Commission’s Electricity Division for all bills rendered after the effective date of this Order.

---

6 We note that the Presiding Officers issued a docket entry on July 15, 2010 requesting further clarification concerning the proposed methodology, to which Petitioner filed its response on July 20, 2010 and indicated, “Petitioner would not be opposed to using the proposed revenue requirements for Riders 62 and 71 going forward....”
2. Petitioner’s proposed updated Rider 71, as reflected in the exhibits and testimony of Duke Energy Indiana, is hereby approved. The Rider 71 shall go into effect upon the filing of the final Rider with the Commission’s Electricity Division for all bills rendered after the effective date of this Order.

3. Petitioner’s proposed updated Rider 63, as reflected in the exhibits and testimony of Duke Energy Indiana, is hereby approved. The Rider 63 shall go into effect upon the filing of the final Rider with the Commission’s Electricity Division for all bills rendered after the effective date of this Order.

4. Petitioner’s ongoing review progress report on its clean coal technology projects is hereby approved.

5. Petitioner’s updated cost estimates, in-service dates and updated environmental projects for its NOx Compliance Plan equipment are hereby approved as reasonable.

6. Petitioner’s updated cost estimates and in-service dates for its Phase 1 CAIR/CAMR Compliance Plan equipment are hereby approved as reasonable.

7. Petitioner’s proposed apportionment of Nucor new demand charge revenues applicable to interruptible load as described in the testimony of Mr. Kent Freemen and modified in Finding Paragraph No. 8 above is approved.

8. The detailed cost estimate, transaction and contract pricing information contained in the testimony and exhibits of this case are found to be confidential and trade secrets and therefore, excepted from public access.

9. This Order shall be effective on and after the date of its approval.

HARDY, ATTERHOLT, MAYS AND ZIEGNER CONCUR; LANDIS ABSENT:

APPROVED: AUG 1 8 2010

I hereby certify that the above is a true and correct copy of the Order as approved.

Brenda A. Howe
Secretary to the Commission
