Septic Contractors/Property Owners

RE: Septic Permits

Prior to the issuance of a septic permit the following steps must be taken:

1. A soils evaluation must be done by a certified Soil Scientist.
2. After the property owner or contractor receives their copy of the soils evaluation, they need to contact this office to verify if the area is suitable for a septic system and if so, what type of system, size of system, and depth requirement of leech lines, and perimeter drain, if required.
3. The septic installer will need to visit the site where the leech bed is to be installed. Leech lines need to be marked off. Elevation of leech lines, as well as outlet for perimeter drain must be verified.
4. A copy of the soils test and a drawing by the septic installer must be submitted to the Health Department for review prior to the issuance of a septic permit. The drawing must show:
 - A. Septic system layout, including elevation of leech lines, and perimeter drain starting point and dispersal area (outlet).
 - B. Measurement of proposed septic system from the following:
Property lines, creeks, ditches, ponds, neighboring wells,
proposed dwelling, detached structures, driveway, swimming pool, any
easements, underground utility lines, etc.

Note Area of proposed leech bed must be kept undisturbed and should be barricaded or flagged off to keep unnecessary traffic of vehicle and equipment off of the leech bed area.

***Septic permit fee is \$50.00 payable by correct cash, or check.
