

QUARANTINE GUIDELINES AND INFORMATION

If your animal has been quarantined at a shelter or local veterinarian, the required date to pick up the pet is _____ . If you do not reclaim your pet from (or make arrangements with) the quarantining agency by the end of the business day of the date entered above, and pay appropriate fees at the time of reclaim, the animal will become the property of the agency at that time. The disposition of the animal may be determined at that time by the quarantining agency.

INSTRUCTIONS FOR A HOME QUARANTINE

(Location of quarantine is at the discretion of the quarantining agency.)

1. Facility used for confinement shall ensure an escape-proof environment subject to unannounced periodic spot checks by the animal control officer or local health officer. The animal shall be confined inside a structure, not on a chain or in a fenced yard. Diagrams for the construction of cat and dog isolation cages are available if such is recommended by the animal control officer or local health officer.
2. The animal shall not leave the quarantine premises for any reason. The animal shall not have contact with humans or other animals for the 10-day period, with the exception of the primary caretaker. Animals may be taken outside to void, provided they remain on a six (6) foot or shorter leash and are immediately returned inside to quarantine.
3. At the first sign of illness in the animal, the owner shall notify the quarantining agency. Symptoms to watch for include fever, loss of appetite, excessive irritability, unusual vocalization, change in behavior, restlessness, jumping at noises, trouble walking, excessive salivation, tremors, convulsions, paralysis, stupors, or unprovoked aggression.
4. At the end of the 10-day quarantine period, the owner is responsible for contacting the quarantining agency to report the health status of the animal.
5. If these guidelines cannot be met or are violated at any time during the quarantine, the animal will be seized and the 10-day quarantine will be completed at the department of animal control shelter or a facility designated by the local health officer.
6. When a pet has been exposed to rabies and it is not vaccinated, euthanasia is recommended. Alternatively, the owner has the option of arranging for a six-month quarantine at the owner's expense. This is due to the special public health risks associated with these animals (i.e., those potentially incubating rabies) and the need to prevent human and other animal exposures from occurring should rabies symptoms develop.

MEDICAL INFORMATION FOR VICTIMS AND PET OWNERS

Questions regarding medical treatment and advice should be directed to your family physician. Concerns regarding tetanus toxoid and/or rabies prophylaxis may be addressed by your physician or the local health officer. If your pet has been injured by another animal, contact your veterinarian for appropriate treatment.
