Noble County Health Department Residential Onsite Sewage System Permitting Process

- 1)** Complete a Noble County Onsite System pre-application form and return it to the Noble County Health Department. **ALL** applications must be accompanied by a set of floor plans for the home. All rooms in the home must be labeled and the number and placement of any jetted tubs with 125-gallon capacity or greater must be identified.
- 2)** Contact the IRSS Certified Soil Scientist and set up an appointment for soils analysis. A list of IRSS that frequent Noble County may be obtained from the Noble County Health Department.
- 3)** Contact the NCHD for minimum requirements.
- 4)** Take the minimum requirements to your septic design/installer. He / She will develop a set of detailed installation plans that must be submitted to the Health Department. The construction plan must address the limitations of the site and incorporate all of the items listed on the Noble County Plan Review Checklist Summary.
- 5)** The system designer, homeowner, or homeowner's agent must submit the installation plans along with any other required paperwork (materials list, elevations, etc.) to the Health Department for review. The plan submitted must also include a plot of the property including landmark features such as roads, streams, ditches, field tiles, etc. A Drainage Clearance Form is required from the Noble County Surveyor's office.
- 6)** the plans will be reviewed and a site visit may be made by Staff of the Noble County Health Department. The system designer must make required additions and/ or corrections to the plans as required by the Health Department. When the plans are approved, the Septic Permit may be issued. A permit fee will be due at this time. It is necessary to set an appointment with the NCHD for permit issuance. The permit must be displayed at the property in conspicuous place visible from the access road.

NOTE: While many contractors undertake these actions, it is ultimately the responsibility of the property owner to ensure that an onsite permit is obtained before an onsite system is installed, repaired, replaced and/or altered and to see that the onsite system is inspected and given final approval from the Health Department before it is utilized. The property owner is responsible for protecting the site of system installation before, during and after construction, maintaining the onsite system and reporting any problems to the Health Department in a timely manner. The property owner is the sole responsible party for the system function and maintenance. Site disturbance and poor installation practices are obvious reasons for system failure; however, properly installed systems can fail. Timely and quality maintenance are the keys to system longevity.

Please contact the Noble County Health Department at 260-636-2191 with any questions.
