Mercury Wireless Indiana, LLC
6004 Highview Drive, Suite B
Fort Wayne, IN 46818

fast, reliable, and unlimited Internet access to connect and empower the communities it serves.

**Mercury Connects Central Indiana: Conquering the Digital Divide**

The *Mercury Connects Central Indiana* project will provide broadband Internet and communications services to unserved residents, businesses, government, and educational institutions in Central Indiana utilizing a Broadband Wireless Access (BWA) network. BWA networks offer an alternative to fiber, delivering similar speeds and reliability. In a funding partnership with the State of Indiana, Mercury Wireless Indiana, LLC. will provide unserved locations with 100 megabits per second down by 20 megabits per second up by August 2021. The rapid deployment and wide availability provided by BWA networks will improve access to business services, health care, education, and entertainment improving the longevity and economic development of the communities we serve.

Mercury Wireless will connect communities in Adams, Blackford, Delaware, Grant, Howard, Jay, Tipton, and Wells county Indiana. The Company anticipates making broadband Internet and communication services available for a total of 2,583 unserved locations. For over 10 years, Mercury Wireless has been deploying advanced carrier class wireless networks using state of the art wireless technologies. The Company plans to leverage existing resources already deployed in the central Indiana area including; tower sites, fiber resources, offices for operations, employees, and support infrastructure to accelerate its BWA network development. The Company also intends to build onto its existing BWA network adding additional sites, upgrading existing sites with new technologies, adding additional fiber resources to improve throughput and reliability, and improving coverage across central Indiana.

Connecting Indiana communities to broadband Internet services will promote the overall economic health of our residents, businesses, government, and educational institutions in numerous ways. Residents can more actively participate in educational opportunities including online curriculum for school age children and continuing education opportunities for adults, maximizing earnings potential. Farmers will have access to more powerful resources increasing the value of agricultural production. Citizens can take advantage of life-saving telehealth and telemedicine services improving the health and well being of our communities. Rural businesses and entrepreneurs can overcome the unique set of challenges maximizing growth and business opportunities. Access to fast, reliable, and unlimited broadband Internet service is critical in allowing our communities to economically flourish, and Mercury Wireless is committed to empowering the communities we serve.
