INDIANA ELECTIONS DIVISION
2020 SEP 23 AM 9:02

Timeline narrative for the plan from the Election Board:

1. On January 24, 2018, the Marion County Election Board adopted Resolution 01-18 providing direction to study the concept of vote centers in Marion County.
2. An election administration planning committee (EPAC), as prescribed by Resolution 01-18, held two meetings:
 - a. On April 3, 2018 at the City County Building, 200 E. Washington St., 46204. At this meeting, public testimony was taken to help develop the draft plan for Marion County.
 - b. On June 19, 2018 at Marion County Election Service Center, 3737 E. Washington St., 46201. This meeting had two vendors demonstrate e-pollbooks that the MCEB was considering at the time, in a public setting.
3. The Marion County Election Board adopted Resolution 06-18 on July 25, 2018 to establish six (6) satellite voting locations for the November 6, 2018 General Election.
 - a. The Board operated six satellite locations as a vote center pilot, using the following election equipment: ExpressVotes and electronic pollbooks.
4. On October 3, 2018, the Board held its first public meeting on the vote center plan.
5. The second public meeting was held on November 6, 2018. At this meeting, the Board considered an amended version of the vote center plan presented on October 3, 2018. Amendments made to the original draft plan included an update to the anticipated poll site list and an update to the number of active and inactive voters in Marion County. The Board adopted an order approving the amended vote center plan.
6. The City-County Council, the county fiscal body, adopted a resolution approving the vote center plan on December 3, 2018.
7. The Mayor of Indianapolis, who is the county executive, adopted a resolution approving the vote center plan on December 4, 2018.

- For the June 2, 2020 Primary Election, Marion County utilized 22 polling locations pursuant to Indiana Election Commission Order 2020-40, Section 8.
- For the November 3, 2020 General Election, Marion County will have 187 polling locations.

A list of the buildings, and their physical address can be found as Exhibit B at the end of this plan. Exhibit C is a map, representing the geographical location of the sites in Marion County.

Exhibit D depicts a copy of the anticipated floor plan for each vote center location.

Vote Center Equipment and Pollworkers

All vote centers, with information on each registered voter in Marion County, will be linked using electronic pollbooks (e-pollbooks). At least one e-pollbook will be provided to each location. More devices will be provided at certain locations depending on the anticipated number of voters for that vote center. The e-pollbooks will be connected to a central database, that all e-pollbooks can access using a secured wireless internet connection.

Marion County will deploy ExpressVote touchscreen ballot marking devices to each vote center. At a minimum, there will be two (2) of these machines at each vote center location. The Election Board will provide more machines to vote centers based on expected turnout at each site.

Each vote center will have only one Inspector, to manage and administer the location. For each of the vote centers, the Election Board will request that each major political party appoint at least one pollworker to that location. If a political party does not make an appointment for a vote center location, the Election Board will appoint pollworkers.

In vote centers where a low-turnout of voters is expected, the Inspector will serve as the leader of the vote center. Inspectors will ensure that the vote center opens and closes on time, addresses vote-challenges, controls the accounting of ballots, and assists the other pollworkers in their assigned duties. Locations where turnout is expected to be relatively high will have more pollworkers to assist in processing voters. These pollworkers, (or Clerks) will be responsible for greeting each voter, checking for

Information for each voter is housed in the ePulse program, which can be accessed by each e-pollbook as well as by the staff in the Marion County Election Board. Once a voter has cast a ballot, the ePulse information is updated to reflect this change.

The following hardware, firmware and software will be used to manage electronic poll lists:

Item	Use	Type
4 th generation iPad	Access information for e-pollbook	Hardware
Star Micronics Bluetooth label maker	Print label for ballot secrecy envelope at early voting	Hardware
ExpressVote Printer	Print voter specific information on top of ballot	Hardware
Poll Pad Printer Cords	Connects Poll Pad to ExpressVote Printer	Hardware
iOS 13.6.1	iPad Operating System	Firmware
ePulse	Voter database	Software
Poll Pad 2.5.0	Connects information from the database for each vote center	Software

5. **For each vote center, a list of the precincts whose polls will be located at the vote center consistent with IC 3-11-18.1-13:**

In compliance with IC 3-11-18.1-13, any registered voter in Marion County will be able to cast their ballot at any of the vote centers in Marion County, representing the 600 precincts in the county.

6. **The number of precinct election boards that will be appointed at each vote center:**

Each vote center will have one appointed precinct election board. See Exhibit E for a detailed description of Marion County vote center pollworker job descriptions and staffing levels.

7. **Designate the precincts that each precinct election board will administer:**

Each precinct board, regardless of size, will be able to administer the election for any precinct, and all ballot styles, and splits, for voters in Marion County.

8. **The number and title of the precinct election officers who will be appointed to serve at each vote center:**

For each vote center, the Election Board will request that each major political party appoint at least one pollworker to that location. If a political party does not make an appointment for a vote center location, however, the Election Board will appoint pollworkers. See Exhibit E for a pollworker job descriptions and vote center staffing levels.

9. **For each vote center specify the following:**

(A) **The number and type of ballot variations that will be provided at the vote center:**

Each ballot style created for a particular election will be available in every vote center location.

(B) **Whether ballots will be delivered to the vote center or printed on demand for a voter's use:**

Marion County is utilizing a type of voting technology similar to printing ballots on demand. The technology deployed by Marion County will allow each voter to insert a blank ballot card into an ExpressVote, a ballot marking device. Once the correct ballot style is activated, the voter will mark his or her selections on the ExpressVote screen. Then the ExpressVote will print the voter's selections onto the ballot card, where the voter can review their candidate selections.

Marion County will deploy ExpressVote touchscreen devices to vote centers. More machines will be apportioned to the vote centers based on expected turnout at each site.

13. Whether each ballot card will have the printed initials of the poll Clerks captured through electronic signature:

The vote center Clerks will initial each ballot by hand. Their initials will not be printed on the ballots by a machine.

14. The security and contingency plans to be implemented by the county to do all of the following:

(A) Prevent a disruption of the vote center process.

- The county has adopted the security requirements as outlined in IC 3-11-15-46.

(B) Ensure that the election is properly conducted if a disruption occurs.

- The Marion County Election Board has a hotline for pollworkers to call on Election Day. The hotline has volunteers, election board staff, equipment vendors, and attorneys on hand to answer questions and respond to disruptions. Loss of Internet Connection: The tablets are designed to operate without an internet connection. The pollbook data is stored on each Poll Pad individually. In the event, the Poll Pad loses its internet connection, it can still operate with the data stored on it. When the connection is restored, that particular Poll Pad will sync with ePulse again.
- The Marion County Election Board has also contracted with a vendor to visit all sites and ensure that internet connectivity exists for each MiFi (internet hotspot) that will be used on Election Day. Loss of Power: The election equipment and electronic pollbooks are both designed to operate without a power source. Their internal batteries have several hours of back-up power available.

(C) Prevent access to an electronic pollbook without the coordinated action of two (2) precinct election officers who are not members of the same political party.

- Poll Pad 2.5 will require each election officer of a political party to have a code different from the officer of the other party.

18. The method and timing of providing voter data to persons who are entitled to receive the data under this title:

Voter data will be provided at 10:00 a.m., 12:00 p.m., 2:00 p.m., and 4:00 p.m. on any day in which voting occurs, to the Marion County Democratic Party and the Marion County Republican Party. Any additional person who is entitled to receive the data under Indiana Code shall request access at least 72 hours prior to the day of voting.

19. That the county election board shall adopt a resolution under IC 3-11.5-5-1 or IC 3-11.5-6-1 to make the central counting of absentee ballots applicable to the county (if the board has not already done so).

Indiana Code sections 3-11.5-5-1 and 3-11.5-6-1 were repealed during the 2019 Legislative session.

20. For a plan adopted after July 1, 2014, in a county in which a majority of votes are cast on optical scan ballot cards, any additional procedures to provide for efficient and secure voting at each vote center, including ballot on demand printing.

- (A) A Marion County voter will enter the vote center and complete the sign-in process on the Poll Pad, electronic pollbook. The Poll Pad will print a bar code on the voter's ballot card that corresponds to the correct ballot style for each voter. The voter will take their ExpressVote ballot card to an ExpressVote and insert the ballot card into the Express Vote. The ExpressVote reads the bar code and will activate the correct ballot style for each voter.
- (B) On Election Day, when the voter is finished they will first review their sections on their ballot card and then insert it into the DS200. The DS200 is the vote tabulation machine.
- (C) During early voting, the voter will place their voted ExpressVote ballot card into a ballot secrecy envelope that will be stored until Election Day.

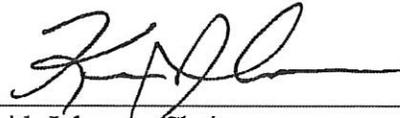

Exhibit A - Resolution 01-18

 COPY

- c. In each election in the future, commencing with the 2019 Municipal Primary Election, several of the vote center polling places will be open for early satellite voting for at least the two weeks prior to election day, with the EAPC to recommend the number of satellite sites for each type of election held in Marion County (primary, general, municipal).
3. The EAPC shall timely make recommendations to the Board regarding changes to equipment, staffing, process, and applicable law sufficient to carry out the purposes of this Resolution and implement the voting method changes provided herein.

ADOPTED AND APPROVED at a meeting of the Marion County Election Board on the 24th day of January, 2018.
